Descriptors—\*After School Programs, Child Development, Classroom Techniques, \*Day Care Programs, \*Elementary Education, Inservice Education, Learning Activities, Play, \*Program Planning, Resource Materials, Space Utilization, Staff Role, \*Student Centered Curriculum, Workshops

Identifiers—\*After School Day Care

This pamphlet offers guidelines for directors and teachers interested in providing good after-school day care programs for children 6-12 years of age. The typical school-age child served by after-school programs in New York City is described in the introduction, and the importance of creative play is emphasized. Topics include: (1) the role of the director, particularly in reference to evaluating teachers through classroom observation and providing for inservice workshops; (2) the selection of basic equipment and supplies appropriate for a flexible, creative, low-cost program; (3) the problems inherent in dealing with restless children after school; and (4) the role of the teacher in providing the proper physical and emotional environment for children. Suggestions are given for expanding after-school programs into potential learning centers which build upon children's pre-existing interests and provide both indoor and outdoor activities. Outlines of three workshops designed for directors are included in the appendices along with a bibliography. (ED)

Identifiers—Finland

This book describes a study (conducted in Finland) which examined antecedent conditions for the development of creativity in children and evaluated a kindergarten activity program designed to increase children's creativity. Subjects were 168 kindergarten children (86 girls and 82 boys). Extensive information about each child's family was gathered, including data on social background and environmental stimuli in the home. Experimental groups were given 6 weeks of structured art education and creativity enrichment activities. Before the training children were evaluated on tests of play ability, intelligence, vocabulary and creativity; after training they were given tests of intelligence, school readiness, and creativity. Results indicated that social background variables were not strongly related to creativity before or after training; however, the more creative activities and art interests the parents had, the more creative their children were both before and after the training. The training program appeared to increase children's

creativity more than traditional kindergarten classes. The program increased both boys' and girls' creativity, with girls becoming more fluent, flexible and original, and boys becoming better at drawing. Recommendations for early education programs and for further research concerning creativity training programs for young children are provided. (BRT)

Descriptors—\*Animal Behavior, Body Weight, \*Dietetics, Motor Development, \*Nutrition, \*Physical Development

Identifiers—\*Protein Deficiency, Squirrel Monkeys

This study investigated the effects of a short period of severe protein malnutrition on subsequent growth and development in the squirrel monkey. A total of 12 newborn monkeys were fed a low protein diet from 2 to 8 weeks of age then rehabilitated by returning them to the 13 percent protein diet of the control group. Minimum amount of protein needed for maximum growth was about half that of the control diet. For one year, measures of body weight, plasma protein and albumin concentration, hemoglobin and locomotion were collected for protein deficient and control animals. Results, which show lasting effects of body weight deficit and markedly depressed plasma albumin levels during the malnutrition, attest to the severity of protein malnutrition induced in these animals. Autopsy data obtained from animals who died during the period of the malnutrition indicate that brain weights were depressed and that malnutrition interfered with brain development. (GO)

Descriptors—\*Animal Behavior, Cognitive Development, \*Dietetics, \*Nutrition, Social Development

Identifiers—\*Protein Deficiency, Squirrel Monkeys

This paper outlines research designed to establish dietary correlates of malnutrition, and questions the common assumption that high protein foods should be used as dietary supplements in humans. Because thorough investigation of dietary needs in children is ethically unfeasible, squirrel monkeys were used in the research to study the biological and mental effects and the behavioral correlates of deficiency disease. Infant squirrel monkeys were taken from their mothers after birth and fed a low-protein diet from 2 weeks to 8 weeks of age. Group rearing conditions were provided by satellite cage arrangements for every four animals. The members of these social groups were allowed to interact for four hours a day. All animals were given normal diets at the age of 8 weeks. (GO)

Descriptors—\*Animal Behavior, \*Dietetics, Discrimination Learning, \*Nutrition, \*Perceptual Motor Learning, Retardation, Shift Studies, Visual Perception

Identifiers—Habituation, \*Protein Deficiency, Squirrel Monkeys

Perceptual motor development, habituation, and learning in squirrel monkeys were studied under controlled rearing and diet history conditions to determine whether the animal's level of behavioral development was similar to well-nourished animals of his own age (agemates) or his own size (sizemates). From birth to 8 weeks of age, the animals were tested weekly on two items of perceptual motor development, visual locating of a click and visual following of an object. At 18 and 52 weeks of age, they were tested in a standard visual habituation-dishabituation paradigm, and from 44 to 52 weeks, they were tested using a two-choice color discrimination learning procedure. Results indicate that early protein deficiency had a strong retarding effect on early growth, and a significant but less extreme effect on perceptual motor development. Protein deficient animals were retarded compared with agemates but precocious compared with sizemates. The behavioral effects associated with protein deficiency persisted for at least 10 weeks after the diet restriction. (GO)

Descriptors—\*Animal Behavior, \*Dietetics, Group Behavior, Interaction Process Analysis, \*Nutrition, \*Social Development  
Identifiers—\*Protein Deficiency, Squirrel Monkeys

This paper reports an observational study of the effects of handling on the social behavior of squirrel monkeys who received a protein deficient diet. After birth, experimental animals received a low-protein diet for a 6-week period. A subgroup of these animals were handled between 3 and 12 weeks of age. All of the animals interacted (in four animal social groups), five times a week beginning at 4 weeks of age. Animals were observed interacting twice-weekly. Results indicate that protein deficiency produces a general retardation of development as measured by locomotion, use of space and social contact. Between 20 and 41 weeks most of the differences had disappeared; the differences that did maintain offer evidence that handling attenuates the effect of protein deficiency, specifically in the area of motor behavior and activity. It is suggested that low levels of protein in the diet during the critical period of brain development cannot be compensated for fully by handling. Loss of the non-handled deprived group by death leaves unanswered the question of persistent effects of handling on the ultimate outcome of nutritionally deprived animals. (GO)

Identifiers—\*Elementary Secondary Education Act Title III, ESEA Title III, Knobler Perceptual Development Test, Project SEE

This booklet describes the Specific Education of the Eye (SEE) program, an experimental kindergarten program which emphasizes the development of sensory skills as a prerequisite of learning. The first part of the booklet describes the development, expansion, and recognition of the SEE program. Described are activities (organized in instructional levels) designed to exercise visual and tactile perception and progressing from simple to complex. In daily visual perception lessons, children were instructed to view an

object on a card and describe what they saw, generating the necessary vocabulary. Children were then directed to locate objects in the room which contained elements of the perceptual object on the card under discussion, to look at the activity card, and to draw what was seen. Tactual perception activities were also developed in which children constructed the object. Subjects were pre- and post tested on perceptual ability. Results showed that children in experimental groups increased in perceptual ability more than children in control groups. Some teachers' responses to the SEE program are included. Appendices provide the perceptual activity objects, a perceptual development pre test, and a program evaluation form. (BRT)

**An Analysis of Observer Influence on Sex and Social Class Differences in Mother-Infant Interaction.**

Pub Date Apr 75

Note—33p.; Paper presented at the Biennial Meeting of the Society for Research in Child Development (Denver, Colorado, April 10-13, 1975)

EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage

Descriptors—\*Bias, \*Data Collection, Infants, Mothers, \*Observation, \*Parent Child Relationship, Sex Differences, \*Social Class, Verbal Communication

Identifiers—Unobtrusive Measures, \*Verbalization

This study was undertaken to determine whether the process of collecting observational data on mother-infant interactions influences the phenomena under investigation. A total of 40 white mother-infant dyads participated in the study. Half of the mothers were middle class and half were working class, and within each class group, half of the infants were male and half were female. All of the infants were between 10 and 11 months old at the time of the study. To assess the effect of the presence of an observer does have significant differential effects for the two on the mother-infant interaction while the experimenter was present in the playroom and also while the mother and infant were alone in the playroom unaware that they were being observed. All actual observation and recording of data was done from an adjacent observation room. Results indicated that in a laboratory investigation, the presence of an observer does have significant differential effects for the two social classes, with the working class mothers producing significantly more verbalization in the unobtrusive condition and the middle class mothers verbalizing equally in both conditions. There was no significant main effects for sex of infant. (JMB)

Descriptors—Affection, Infant Behavior, \*Infants, \*Middle Class Mothers, \*Parent Child Relationship, \*Parent Influence, \*Response Mode  
Identifiers—\*Body Contact

This report is based on a longitudinal analysis of physical-contact interaction of mother-infant pairs throughout the first year of life. The sample consisted of 26 middle-class mother-infant pairs who were observed in their homes for four hours once every three weeks. During each visit, the observer made a running record of everything that happened when the infant was interacting with another person. The report focuses on the data on pick-ups by the mothers. The infant measures examined positive and negative responses to being held and positive and negative responses to being put down. The maternal measures examined tender, careful holding, inept holding, and affectionate behaviors. Findings suggest that initial constitutional differences in infants' responses to contact are overridden by the influence of maternal behavior and that tender, careful holding is most clearly associated across time with positive infant response to being held.

The amount of time the mother held the baby does not seem to influence the child's positive response as much as the way she holds him. Finally, babies who show most enjoyment of close bodily contact with their mothers do not become addicted to it, but are the very ones who became increasingly content to be put down. (JMB)

**The Effects of Task-Specific Instructions on the Encoding Activities of Children in Recall and Recognition Tasks.**

Pub Date 11 Apr 75

Note—14p.; Paper presented at the Biennial Meeting of the Society for Research in Child Development (Denver, Colorado, April 10-13, 1975)

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—\*Cognitive Development, \*Cognitive Processes, \*Elementary School Students, Pictorial Stimuli, \*Recall (Psychological), \*Recognition

Identifiers—\*Encoding (Psychological)

Two experiments examined the effects of task-specific instructions on the recall and recognition memory of kindergarten, 2nd and 5th grade children for pictorial stimuli. In Experiment 1, a recall test was used and prior to stimulus presentation subjects were given one of three instructions: either a Recall-specific set, a general Remember set, or a misleading Recognition-specific set. Recall data indicated no instruction differences at the kindergarten level, differences favoring the Recall-specific over the Recognition-specific set at grade 2, and differences favoring the Recall-specific over both the Remember and Recognition-specific sets at grade 5. In Experiment 2, the same instruction sets and stimuli were presented, but followed by a recognition test. Recognition data revealed no instruction effects at grade 5 (due to a ceiling effect), differences favoring the Recognition-specific and Recall-specific sets at grade 2, and scores favoring the Remember set at the kindergarten level. These findings were seen to reflect the uneven development of recall- and recognition-specific memory capabilities. The role of particular encoding and storage activities was discussed. (Author/JMB)

Descriptors—Age Differences, Cognitive Development, Cognitive Processes, Elementary School Students, \*Memory, \*Motor Reactions, Perceptual Motor Learning, Primacy Effect, \*Recall (Psychological), Serial Learning, \*Verbal Ability, \*Verbal Learning, Verbal Stimuli

This study examining children's ability to organize information for the purpose of recall was designed to control for verbal ability differences. The participants were 10 boys and 10 girls each from kindergarten, 2nd, 4th and 6th grades. A modified "Simon Says" game was used to enable the children to respond to eight selected verbal and motor commands with an appropriate motor act. The experimenter first read or demonstrated each of the eight commands in a random order and, after all the commands had been presented, asked the child to execute as many of the commands as he could. Each child received 20 presentations of the eight commands. Results revealed recall effects typically observed in studies on memory development in which words were used as stimuli or responses. These included: (1) serial position effects, with younger children showing more recency and older children more primacy effects, and (2) better recall by older children. However, since the younger children structured their responses in recall as well, and in the same way as older children, the developmental differences in amount recalled would not seem to depend on response organization. (JMB)

 Identifiers—State Education Agencies Symposium

This paper outlines an investigation aimed at illuminating the rationales that states and state policy makers have used to support their early childhood education policy initiatives during the 1971-73 legislative sessions. An in-depth comparative case study approach is used in five selected states with regard to kindergarten legislation or programs for 5-year-olds. Each of the five case studies is divided into three sections: (1) an introduction to the particulars of the individual state's political system; (2) a look at the evolution of an early childhood legislative proposal from formulation through the various stages of development to ultimate resolution by the state legislature; and (3) a review of the major rationales found in the investigation of each state. The findings of the study are presented in terms of the similarities and differences of the states' policy making processes; the rationales exhibited in the cases are discussed and compared. (JMB)

 Identifiers—\*North Carolina

This report presents data collected from a telephone survey of 777 North Carolina families (with children under 14 years of age) concerning their uses of and preferences for child care services. Three basic questions were asked by the surveyors: (1) How will children be cared for in the absence of parents during the coming school year? (2) What is considered the best type of child care arrangement in the absence of parents? and (3) Should child care services be available for those who cannot afford to pay the full cost? Information concerning employment status, income, age range of children, cost of current child care services, and other demographic data was also obtained from the families. Data were analyzed by geographic location and demographic variables; survey results are described. Appendices, which make up approximately one-half of the document, provide the telephone survey, contingency tables comparing reported uses of child care services with actual uses, and additional tables of sample information.  Identifiers—\*TADPOLE Program

This study was designed to assess the needs of parents in preparing home learning environments for their young children. Subjects included 30 families (10 Anglo, 10 black, and 10 Chicano) with children from birth to 3 years of age. Data on approximately half of the families has been analyzed and is discussed. Half of the subject population had children identified as developmentally delayed/high risk. These children were matched with normal (nondelayed) children in the same ethnic group. Data were collected through videotapes of the child's daily activities, of the parent and child handling new materials, and of sequenced activities based on Piagetian developmental tasks designed to evaluate the child's developmental level. After the completion of the videotape series, parents' knowledge of child development and of how home environments may be prepared for the optimal development of children was assessed by use of a parent questionnaire. An observation instrument was then used to determine the parents' performance in actually preparing appropriate learning environments for their children. Preliminary results indicated that parents of all three ethnic groups had significantly higher knowledge scores than performance scores in the preparation of their children's learning environments.  Note—15p.; Paper presented at the biennial meeting of the Society for Research in Child Development (Denver, Colorado, April 10-13, 1975)

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

Descriptors—\*Attachment Behavior, Behavior Patterns, \*Infant Behavior, Middle Class Parents, \*Parent Child Relationship, \*Sex Differences, \*Stranger Reactions  
 Identifiers—\*Ainsworth

This study examined the differential effects of sex of parent, sex of child, and sex of stranger on infant behavior in a stranger-separation situation. Year-old infants (16 males and 19 males) from middle-class families were observed and videotaped twice, at one-week intervals, in a modification of Ainsworth's laboratory stranger and separation situation. Sex of parent, order of parent (which was counterbalanced), and situational episode were varied within subjects, while sex of child and sex of stranger were varied between subjects. Traditional indices of attachment (indirect indices such as disorganization behaviors) suggested that the infants were more attached to their mothers, while positive approach behaviors of the infants suggested a stronger attachment to fathers. Male infants engaged in proximity-contact seeking and contact maintaining behaviors significantly more than ex-

pected in the mother situation, while daughters were significantly more likely to perform these same behaviors with their fathers. Data analysis suggests that there is not a unitary construct of attachment, but rather different patterns of attachment behaviors which develop individually in relation to specific figures and as consequences of specified interactional experiences. (Author/BRT)

Teachers and administrators should be able to distinguish between adequate and inadequate treatment of different ethnic groups when selecting culture-fair materials for the classroom. When selecting such materials, they should consider the following criteria: (1) validity of information (accuracy, perpetuation of stereotypes); (2) balance (comparisons of cultural values, presentation of distinctive cultural characteristics, acknowledgment of differences of social classes and values within the ethnic group); (3) unity (viewpoints concerning historical events or issues, full range of events when discussing historical events, contribution and involvement of the ethnic group(s) at all appropriate and meaningful points); and (4) realism (no erroneous impressions, individual and group portrayal in true-to-life fashion, overall impression of the text's language, tone, and illustrations, and no literal or stilted translations). The concise discussion on curricular content presented in this booklet describe and apply these criteria from the perspectives of Native Americans, Mexican Americans, Black Americans, Chinese Americans, women, blue-collar workers, aged, non-Christians, and those having alternative life styles.  Identifiers—Chicanos

Administrative differences between the broad ethical and moral aspects of the mainstream majoritarian culture and one specific subculture—the Mexican American—are discussed. The main thesis is majoritarian inconsistency ("hypocrisy") and the demand by the minority culture for consistency ("nonhypocrisy"). The entire society profits from the attention being called to these discrepancies because this emphasis will be the keystone of a new ethic which will give a more useful base for models and tools for (1) identifying early signs of Watergate-types of breakdowns in the future, and (2) overcoming deleterious effects of such breakdowns. That Chicanos entering the establishment processes may exhibit the same kinds of discrepancies they had initially disavowed, does not, however, detract from the validity of the insight itself. It seems that minority youth's focus on such discrepancies is associated with insecurities and frustrations in entering formerly denied mainstream public administration and governmental processes. Thus, some impacts of much-discussed

subcultural variations, may be specious to extents that emerging leaders are skimmed off, in this process, with the effect that they do not remain in positions to speak for groups from which they originated. (Author/AH)

Identifiers—ACIP, \*Appalachian Community Impact Project, Community Contacts, Kentucky  
Designed to help bridge the gap between selected Appalachian communities (17 control and 18 experimental Kentucky communities) and the more affluent U.S. society, the Appalachian Community Impact Project (ACIP) used indigenous paraprofessionals, backed by Extension personnel, to work at the community level. It was hypothesized that by using "community contacts" in an holistic approach for a period of 4 years (1969-72), communicative linkage would be established between professional resource people and local community leaders who, thereafter, would continue to solve community problems without benefit of liaisons. ACIP attempts at integration in the power structure included efforts to assure: broad administrative support; broad legitimization; interdisciplinary involvement; integrated community approaches; interdisciplinary references; and informal organizations. Utilizing the principles of communication and education which suggest that who expresses an idea is often

as important as the idea itself, ACIP emphasized communicative skills. It was concluded that by design and action ACIP was successful, for an evaluation by non-Extension staff revealed that when compared with the control communities, the experimental communities made significant improvement in the social institutions and the economy, developing both self awareness and self-reliance. Bartell, Ted

Agrarian Violence: A Comparative Analysis of Recent Farm Movements in Europe and North America.

Pub Date Dec 74

Note—35p.; Paper presented at the Annual Meeting of the Rural Sociological Society (San Francisco, California, August 21-24, 1975)

EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage

Descriptors—Agriculture, \*Comparative Analysis, Farmers, Futures (of Society), Global Approach, Government Role, \*History, Politics, \*Revolution, \*Rural Farm Residents, Social Action, \*Violence

Identifiers—\*Agrarian Revolt, Canada, France, United States

Collective agrarian violence was examined in the U.S. and Canada to determine: (1) if the American historical experience was unique; (2) if the American farm movements evidenced the same characteristics and development as those in Europe; (3) if American collective agrarian violence has manifested the same characteristic shape as that of France over the periods 1830-1860 and 1930-1960. It was found that in France the characteristic forms, precipitating factors, and objectives of agricultural disturbances had changed predictably with increasing organization and that similar phenomena had occurred in North America over the same time periods. It was concluded that in America there has been a lack of political/historical research on agricultural violence which might substantiate these tentative findings. Examination of contemporary French and American farm revolt movements revealed the emergence of "autonomist" themes and a corresponding new emphasis on internationalism. For example, the Committee for Economic Development has advocated (1957 and 1962) the gradual removal of price and income support programs; acreage allotments and controls; and job training for displaced farmers. The ideology underlying such efforts is one that suggests government control has been both self-serving and manipulative on behalf of corporate interests and banking. (JC)

The American Indians: Answers to 101 Questions. Bureau of Indian Affairs (Dept. of Interior), Washington, D.C.

Pub Date Jun 74

Note—72p.; For related document, see ED 025 353

Available from—Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 24002 (Stock No. 2402-00040, \$1.25)

EDRS Price MF-\$0.76 HC-\$3.32 Plus Postage

Descriptors—\*American Indians, Bibliographies, Definitions, \*Elementary Secondary Education, \*Federal Legislation, Health, Higher Education, Information Sources, Land Acquisition, Land Use, Laws, Publications, \*Reservations (Indian), \*Socioeconomic Status

Identifiers—BIA, \*Bureau of Indian Affairs

Presented in a simple and straightforward manner, this publication answers questions basic to an understanding of the American Indian and his socioeconomic position in the United States. The following identify major areas covered and representative questions: (1) The Indian People (Who is an Indian?); (2) The Legal Status of Indians (Are Indians "wards" of the Government?); (3) The Bureau of Indian Affairs (How is the Commissioner of Indian Affairs appointed?); (4) Indian Lands (What is an Indian reservation?); (5) The Economic Status of Indians (What is the average income of Indians?); (6) Indian Education (Why are there Federal Indian schools?); (7) Law and Order on the Reservations (Do other agencies have responsibility for law enforcement and criminal investigation on Indian reservations?); (8) Indian Health (Do Indians have special health problems?); (9) To Help Indians (How can a non-Indian college student get a summer job with the Bureau of Indian Affairs on an Indi-

an reservation?). Among additional information sources presented are: (1) a selected bibliography for adults; (2) an annotated bibliography for young people; (3) a selected reading list on Indian crafts and lore; (4) a list of Indian museums; and (5) a list of Indian publications. (JC)

Whittlin', Whistles, and Thingamajigs: The Pioneer Book of Nature Crafts and Recreation Arts.

Pub Date 74

Note—190p.

Available from—Stackpole Books, Cameron and Kelker Streets, Harrisburg, Pennsylvania 17105 (\$10.00)

#### Document Not Available from EDRS

Descriptors—Conservation (Environment), Folk Culture, Games, \*Guides, \*Handicrafts, History, Illustrations, \*Methods, \*Natural Resources, \*Outdoor Education, Plant Identification, Recreational Activities

Designed to recapture respect for nature, this book presents numerous natural handicrafts which may be utilized by youth leaders, campers, folklorists, hobbyists, and children of all ages. Illustrated via photographs and drawings, handicrafts are described and presented in terms of history, conservation, and technique. Among the activities included are: (1) making whistles and horns from natural sources; (2) gathering, preparing, and using natural cordage materials; (3) making spears and javelins; (4) developing spear-throwing techniques (primitive prototypes and modern versions); (5) identifying suitable materials for the whip-dart and the slingshot; (6) throwing stones with power and using the sling; (7) making and using the primitive blowpipe; (8) making and using the boomerang (Australian return and non-return, pinwheel, and cross-stock boomerangs); (9) making bows and arrows and increasing marksmanship; (10) identifying materials for making walking sticks; and (11) making fishing tackle and learning fishing techniques. Additionally, this book presents concise descriptions detailing the collection and use of various trees, plants, shrubs, and grasses. (JC)

Tannik School: The Impact of Education on the Eskimos of Anaktuvuk Pass.

Pub Date 75

Note—210p.

Available from—Alaska Methodist University Press, Anchorage, Alaska 99504 (\$10.00)

#### Document Not Available from EDRS

Descriptors—\*Case Studies, \*Change Agents, Community Role, Cultural Background, Educational Needs, Elementary Education, \*Eskimos, \*Rural Schools, \*School Community Relationship, Social Change, Socialization, Socioeconomic Status, Student Teacher Relationship, Teacher Role

Identifiers—\*Alaska Natives, Nunamiut

Employing a standard anthropological field approach, this case study examines the impact of formal education upon an Alaskan Eskimo community and provides a record of the establishment and development of a small, rural school. Emphasis is placed on the change efforts exerted by people identified with the school and the reaction to these efforts by the Nunamiut Eskimos of Anaktuvuk Pass. The nine chapters are titled as follows: (1) "The Nunamiut of Anaktuvuk Pass" (setting, people, subsistence, social activities, government, and world view); (2) "The Process of Enculturation" (the new Nunamiut, infancy, early childhood, later childhood, adolescence and young adulthood, the Nunamiut adult, social control, and old people); (3) "The Emerging Role of the Teacher" (village teachers and teacher roles, 1967-69); (4) "Socialization of the Bush Teacher" (background, the State's role, role of visitors, villager's role); (5) "The Child, the School, and the Teacher" (the physical plant, the classroom routine, measures of school progress, teaching the Nunamiut, and case studies); (6) "The Villagers, the School, and the Teacher" (aspirations for children, attitudes toward teachers, and teacher-village interaction); (7) "The Impact of Education" (the school as change agent); (8) "Altering the Educational Stance" (meeting adult, children, and teacher needs); (9) "Epilogue." Descriptors—\*American Indians, Career Opportunities, Cultural Differences, Economic Disadvantage, Educational Programs, Models, \*Paraprofessional School Personnel, \*Program Descriptions, \*Recruitment, Rural Schools, Teacher Aides, \*Training

Identifiers—Cherokee Nation, Oklahoma City University, Onsite Pueblo Personnel Training Program, Rural Indian Education Program, Teacher Aide Project

Since there are large gaps between the culture, economy, and education of Native Americans and mainstream Americans, the recruitment and training of Native Americans as paraprofessionals in the schools appears to be a promising opportunity to deal with all three gaps simultaneously. Three model programs which are currently bridging these gaps with increasing levels of complexity are: (1) the Rural Indian Education Program sponsored by the Cherokee Nation and the Tulsa Public School District; (2) the Teacher Aide Project sponsored by Oklahoma City University; and (3) the On-site Pueblo Personnel Training Program sponsored by the All Indian Pueblo Council and the University of New Mexico. The Tulsa program recruits and trains parents and other Indian adults as classroom paraprofessionals capable of undertaking very specific tasks. The Oklahoma City program goes beyond such objectives by providing university classes for its paraprofessionals and giving college credits for courses taught on-site throughout the State. The New Mexico program is the most comprehensive of the three in that it is planned to encourage Indian paraprofessionals to complete a sequence of courses leading to an Associate degree and to move on to advanced degrees. In the Pueblo program, most instruction is conducted in the schools in which the aides work. (JC)

Descriptors—Academic Achievement, Bilingual Education, Community Involvement, Curriculum Development, \*Early Childhood Education, \*Interstate Programs, Material Development, \*Migrant Education, Mobile Educational Services, \*Paraprofessional School Personnel, \*Parent Participation, Program Evaluation, Spanish Speaking, Staff Improvement

Initiated in 1971, this early education program for children of migrant farm workers uses the adult members of the child's extended family as paraprofessional teachers who have full responsibility for teaching the child. Professional teachers, employed to "back up" the parent teacher, help with training, curriculum planning, securing teaching materials, and performing other services which will help the parent teacher do a more effective teaching job. The program design as 2 components: the "mobile" and the "stationary" components. In the mobile component, the teaching adult brings the children together as they move from La Grulla (Texas) to various work stops in Washington, Oregon, Idaho, and Illinois and continues to teach them. In the stationary program, year-round centers are operated

in Connell and Moses Lake (Washington) to serve the settled-out migrant who is still a seasonal farm worker and the migrants who come in temporarily during the peak seasons. Programmed curriculum materials are used to teach math, reading, handwriting, and language in Spanish and English. Weekly "placement" reports are kept for each child in each subject. The program has provided a significant educational advantage to the children served. This detailed report of program effectiveness covers the instructional, staff development, parent and community involvement, and materials development components and the management for an interstate delivery system. Identifiers—\*New York

Founded in 1968, Program Funding, Inc. (PFI) is a statewide comprehensive agency delivering programs to farmworkers wherever they work and reside in New York. PFI has encouraged State, Federal, and private agencies to make new commitments to farmworkers and has been able to maintain the support of those agency personnel who set the precedents of services to farmworkers in the past. PFI has also been able to grow significantly, both through increased grants and through expanded services to migrant and seasonal farmworkers. Between September 1, 1974 and August 31, 1975 PFI offered migrant and seasonal farmworkers and rural poor: classroom training, on-the-job training, nutritional services, manpower services, housing, day care, and relocation assistance. These activities were made possible through a multiple funding mix of resources. This 1975 annual report presents a listing of resources available to PFI during the period September 1974-August 1975; the program operations and expenditure report; a listing of PFI's 1974-75 staff and local policy board members; and the reports from the Chairperson and the Executive Director. **Affecting Teacher Awareness and Attitudes: An In-Service Program Strategy for Rural Schools.**

Pub Date Oct 75

Note—17p.

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

Descriptors—Educational Objectives, \*Educational Strategies, Elementary Secondary Educa-

tion, Experimental Programs, \*Inservice Programs, \*Inservice Teacher Education, Program Descriptions, \*Rural Schools, Staff Improvement, \*Teacher Attitudes

In July 1973, the New Hampshire School Union 58 began operation of its Experimental School (ES) Project. One of 10 projects nationwide which make up Project Rural, ES's aim was to develop "a community-centered school" which utilized available human and natural resources to foster positive attitudes toward learning, provided individuals with basic skills which enable them to realize personal goals, and utilized community resource facilities as a basis for lifetime learning opportunities. Project components were administration, in-house level I evaluation, and instruction. There were 3 instructional components: career/vocational education, language arts, and environmental/outdoor education, as well as adult education. An in-service training program was conducted to provide practicing educators with the opportunities to enrich their learning and to expand their awareness of new practices and techniques in project related components. Since May 1975, a teacher recertification staff development program has been operated by Union 58. The ES project's in-service workshops, minishops, skillshops, visitations, and staff training activities complimented the local program and provided teachers with the opportunity to gain clock hours of credit toward their professional recertification. Descriptors—\*Change Agents, \*Change Strategies, Changing Attitudes, \*Community Involvement, Community Support, Inservice Programs, Instructional Improvement, \*Program Development, \*Rural Schools, Staff Utilization

A program development and implementation change agent must be a perceptive individual who: (1) can readily identify all facets of a given situation and can choose the most appropriate alternative available; (2) is knowledgeable about the day-to-day life and politics of small, rural communities; and (3) is perceived as belonging by the community people. In order to guarantee stability and permanence of a newly developed program, the change agent needs to involve as many community and school system staff members as possible in every phase of the change process. Community members can be useful co-workers when conducting community surveys, needs assessments, planning meetings, and public support campaigns. Professional staff members can be involved in identifying and writing program goals and objectives; identifying instructional materials and strategies which can be used in the program development process; establishing an instructional time sequence; developing a professional staff in-service training program; and determining the most appropriate evaluation strategy for the tasks at hand. Time is the most important commodity in the process of unfreezing (creating motivation to change), changing (developing new responses based upon new information), and refreezing (stabilizing and integrating changes).  Identifiers—\*Mendoza (Antonio de)

As Mexico's first viceroy, Antonio de Mendoza's most noteworthy achievement was his laying the basis of colonial government in New Spain which continued, with modifications, for 300 years. Although he was lenient in dealing with the shortcomings of his Indian and Spanish subjects, he took a firm stand in dealing with the rebellious Indians in the Mixton War and the Cortes faction which threatened the Viceroyal rule. His primary concern was to keep New Spain for the crown while protecting the Indians from want and inhumanity. Focusing on the institutions he founded and developed, this booklet provides a study of early Spanish colonial institutions. Although the biographical account is of secondary importance, the description of Hispanic colonial institutions are valuable in presenting the Spaniards' colonization after the conquest. Practical application of the material at both the elementary and secondary levels can be utilized in stimulating student discussions and debates on the merits and demerits of 2 colonial powers—the English and the Spaniards. A brief select bibliography is included to provide additional resources and a list of audiovisual aids which are of a general nature and provide broad vistas of the institutions initiated during Antonio de Mendoza's administration. Identifiers—\*Las Casas (Bartolome de)

Bartolome de las Casas devoted himself completely to crusading for the rights of the Indians. Although he was never a missionary among Indians, he began projects such as the Indians' conversion in the Land of War in Guatemala, which later became the task of his Dominican colleagues. However, his true importance lay in his role as the Indians' protector before the royal court. This was shown by his involvement in the debate of Valladolid, the decree of the New Laws of 1542, and the campaign for the abolition of the encomienda and Indian slavery. However, the significance of his crusade went beyond the rights of Indians; it involved the rights of all men. Equally significant was his strong conviction that the Indians had a right to retain their cultural heritage in the face of the invading Spaniards, who considered themselves culturally superior to the Indians. Intended to provide the teacher with meaningful historical information on the clash of cultures and the rights of man, this booklet relates the story of the Spaniards and Indians as seen in the life of Las Casas. Although primarily intended for use by elementary teachers, the booklet may be profitably used by junior and senior high school teachers. A brief bibliography is included to provide additional information, suggested readings for students, and audiovisual materials. (Author/NQ)

Descriptors—American Indians, \*Biographies, Cultural Background, \*Cultural Interrelationships, Curriculum Enrichment, Curriculum Guides, Elementary Secondary Education, Land Settlement, \*Mexican American History, \*Mexicans, Resource Materials, Vocabulary, \*Western Civilization

Identifiers—\*Cortes (Hernan)

The conquest and colonization of Mexico initiated by Hernan Cortes resulted in the fusion of the Indian and Hispanic cultures. This fusion led to the "mestizo" culture. Cortes was the bearer of the Hispanic heritage just as the Aztecs and other Indians in Mexico and the Southwest were the carriers of the Indian heritage. In studying the life of Cortes, he is seen not only as a military conqueror but also as a colonizer in which role he left a more lasting legacy than he did as the victor over the Aztec Empire. This booklet focuses on Cortes' colonizing efforts. In narrating the story, the teacher can stress the religious motivation of Cortes, the building of towns and cities, the introduction of Spanish political and economic institutions, agricultural products, mining and the Spanish language. At the same time the conqueror regarded the Indian as a Spanish citizen, whose civilization had much to offer to enrich what the Spaniard brought. Intended as a teaching tool, the booklet is intended primarily for elementary teachers. However, it can also be profitably used by junior and senior high school teachers. A brief select bibliography is included to provide additional sources which go into greater detail. Added to the bibliography are sources geared to the elementary and secondary levels and audio-visual aid materials. (Author/NQ)

Identifiers—\*Zumarraga (Juan de)

The decades of the 1530's and 1540's witnessed the founding of Hispanic colonial institutions, many of which with modifications continue today. Among the most lasting of these has been the Church. This is part of Juan de Zumarraga's (Mexico's first archbishop) legacy, not only the setting up of ecclesiastical administration but also the prelate's ministry among his people. Zumarraga's concerns were many and varied. Concern for the Indians' spiritual and material well-being prompted Zumarraga to establish schools and hospitals, introduce the first printing press, and collect a library. Equally significant and less known is his role of introducing and promoting European culture in early colonial Mexico. Spain and Portugal were a century ahead of other European colonial powers in bringing Western Christian civilization to the New World. Throughout the 1600's much of the present day United States Atlantic seaboard was a wilderness when compared to the developing cultural life in Central Mexico. This booklet's purpose is to provide the essential historical information for this head start through the study of the life of Zumarraga. Although its primary intent is as a teaching tool for elementary teachers, it can be profitably on the secondary level. A brief bibliography is included to provide the teacher with additional information and a listing of audiovisual materials. (Author/NQ)

Descriptors—Academic Achievement, Age, Demography, Family Income, \*Federal Programs, Health Facilities, \*Health Services, Marital Status, \*Mental Health Clinics, Race, \*Rural Areas, Rural Urban Differences, Sex

(Characteristics), Socioeconomic Background, \*Statistical Data

Characteristics which distinguished patients at federally funded rural community mental health centers in 1971 from those at part rural and non-rural centers were explored. Variables examined were: demographic composition (age, color, and sex), socioeconomic characteristics (annual family income, educational attainment, and marital status), primary diagnosis, previous mental health care, and referrals to and from centers. The 295 centers were classified according to: (1) rural—a center serving a catchment area consisting exclusively of rural counties; (2) non-rural—a center serving a catchment area containing no rural county; and (3) part rural—a center serving a mixed catchment area with one or more rural and one or more non-rural counties. Demographically, more rural patient additions were in the dependency age groups, fewer were black, and more were female than were non-rural additions. Rural center additions were characterized by more lower income persons, more persons with low educational attainment, and more married but fewer never married, separated or divorced persons than were part rural and non-rural additions. More rural additions had received previous mental health care. Differentials by rurality in referral disposition upon discontinuation from centers and in diagnosis were relatively minor. (NQ)

Descriptors—\*Agricultural Laborers, Attitudes, Comparative Analysis, Court Cases, \*Court Litigation, \*Courts, Crime, Justice, Legal Aid, Legal Problems, \*Migrants, Punishment, \*Socially Deviant Behavior

Identifiers—\*New York

The study's objectives were to determine how many migratory farm workers were charged with criminal offenses, who they were, and how they were treated in lay courts in Orleans and Steuben Counties (New York) in 1968 and 1969. Lacking comparative data from other jurisdictions, a comparison between migrants and a random sampling of residents in these same courts was drawn. Data were obtained on the: total number of migratory farm workers in these courts, types and dispositions of charges, number of migratory farm workers represented by counsel, relative success of public defenders representing these workers compared with retained counsel for resident defendants, and possible causes of crime by migratory workers. Data were obtained from: criminal dockets in 18 town and village justice courts and 2 county courts, statistical reports of the 2 types of public defender offices, records of hearings by governmental and quasi-governmental agencies, interviews, and observations. Some findings were: (1) the total number of migratory farm workers charged with criminal offenses in these counties was insignificant; (2) the "typical migrant defendant" was male, 37 years old, black, arrested on charges of having committed minor offenses and convicted almost 90 percent of the time; and (3) the resident defendant was male, white, about 13 years younger, more likely to be charged with misdemeanors, and was about 14 percent less likely to be convicted. Descriptors—\*Anglo Americans, Area Studies, Beliefs, \*Capitalism, Comparative Analysis, \*Culture Conflict, Economics, Ethnocentrism, History, Justice, Land Settlement, \*Land Use, Political Power, Social Structure, \*Spanish Americans

**Identifiers—\*New Mexico**

A Spanish American village economy as influenced by changes in its land base, land rights, and the introduction of mercantile capitalism during the U.S. Territorial period in New Mexico was analyzed. Attention was given to differences in village land tenure and exploitative patterns from those imposed with the advent of Anglo American political control and the long-term conflict that resulted. This conflict was first approached in terms of the contrast between ideal legal systems and beliefs regarding land, landholding, and land use and actual cultural practices in both Spanish American and Anglo American societies; thus, the rural rules were seen as they were practiced in this particular environmental setting. The process of accommodation was explored through detailed analysis of the mediating roles played by Spanish American patrons, Anglo American merchants and attorneys, and the functioning of the most important territorial governmental institutions, which were the Surveyor General's Office and the civil courts of law. **Identifiers—**\*English Speaking

Three hypotheses were tested: (1) there is no significant difference between the proportions of higher level definitions given by the monolingual students and those of the bilingual students given in English; (2) there is no significant difference between the proportions of higher level definitions given by the monolingual students and those of the bilingual students given in Spanish; and (3) there is no significant difference between the proportions of higher level definitions given by bilingual students in Spanish and in English. Twenty-six bilingual Latino (24 spoke Spanish as a first language and 2 English) and 42 monolingual students were asked to define the following words, taken from the vocabulary section of the revised Stanford Binet intelligence test or slight modifications of these: orange, envelope, puddle, eyelash, dress, lecture, hurry, peculiarity, rule, tolerate, and burn. The Spanish language list was compiled by back translation. Correct responses were categorized according to: (1) definitions stressing the word's function, description, location, or origin (signifying lesser linguistic development) and (2) synonym and synonym modified definitions (indicative of more mature or qualitatively higher language development). Both the first and second hypotheses were rejected; the differences favored the monolingual group. Since no significant difference was found, the third hypothesis was retained. (NQ)

**Identifiers—**Elementary Secondary Education Act Title I, ESEA Title I, \*Migrant Student Record Transfer System, MSRTS

A national automated telecommunication system, the Migrant Student Record Transfer System (MSRTS) provides academic and other relevant data on migrant children to participating schools upon request. The system was developed

in response to the need for providing timely academic and health information to the schools these children enter as they migrate. Selected aspects of MSRTS were reviewed to determine its accuracy, efficiency, and the degree of participation in the system. Emphasis was on its use for determining the number of migratory children upon which State fund allocations are based under Title I of the 1965 Elementary and Secondary Education Act. An Office of Education (OE) validation study, completed in March 1974, was also evaluated. A joint effort by OE and State migrant program personnel and an OE consultant, this validation study determined the degree to which the system's data represented actual migrant children at various schools throughout the country. It was found that MSRTS provided a more reliable basis for allocating migrant program funds under Title I and that OE did not provide funding for certain migrant children in fiscal year 1975, though required by the Education Amendments of 1974. **Identifiers—**\*Rural Urban Migration

The result of a literature survey in the general area of rural-urban migration and poverty, this report presents both a synthesis of current research findings and an annotated bibliography. The synthesis includes a nine chapter discussion of: (1) the rural areas left by the migrants; (2) the decision to migrate; (3) comparative characteristics of rural-urban migrants and non-migrants living in urban areas; (4) comparative characteristics of migrants and non-migrants (racial differences); (5) the adjustment of migrants in urban areas; (6) rural return migration; (7) the effects of migration on rural areas; (8) the effect of migration on urban areas; and (9) the policy implications and needed research. The 1,139 annotated bibliographic citations include pamphlets, bulletins, dissertations, research papers, journal articles, etc. Some entries include full abstracts, and a topical index is provided to facilitate use of the bibliography. **Identifiers—**\*Project Telepac, Utah State University

The Utah State University (USU) "Telepac Project" is a service delivery model for homebound handicapped children living in rural areas. Designed to effectively utilize limited numbers of professional personnel, Telepac makes use of: (1) telecommunications technology; (2) parents as a basic treatment resource; and (3) the technology of instructional packaging. Telepac's central component is the Homebound Handicapped Resource Center (HHRC) which includes: (1) a parent resource library; (2) a curriculum resource unit; (3) a multimedia collection; and (4) a telecommunications system. As the source of administration and instruction, HHRC services the home, a local program monitor (LPM), and a local parent group. The curriculum resource unit develops and disseminates "Parent Involvement Packages" which provide

for: (1) training of the child in the home; (2) training of the parent; and (3) involvement of LPM. These packages are supplemented by the multimedia collection and the parent resource library. Utilizing standard telephones equipped with intercoms, the telecommunications system provides for interactions between parents, HHRC, the LPM, and consultant services. The LPM is a professional who helps coordinate: (1) identification and screening of potential families; (2) notification and involvement of the parents; and (3) liaison with HHRC. (JC)

Migrant Education Programs are designed for those students who, because of the migratory nature of their parents' employment, are required to move from one school district to another during the school year. In many instances these students, because of sporadic attendance and discontinuity of their educational experiences, have found it difficult, if not impossible, to function in the regular school programs. Purpose of the Migrant Education Programs is to provide educational and support services necessary to accommodate the unique and specific needs of these students. In planning and administering these programs, provisions are made to create an environment compatible with and attendant to the social, cultural, educational, health, and nutritional needs of these students. Program objective is to identify the individual student's strengths and weaknesses and to prepare a program that will best serve his needs. Prepared for parents, project personnel, and other interested persons, this booklet summarizes the general concepts and requirements of the Migrant Education Programs funded under Elementary and Secondary Education Act Title I. Topics covered are: program funding, priorities, staffing, and evaluation; student eligibility; supplemental program funding; support services; parent involvement; the Migrant Student Record Transfer System; bilingual education; and in-service training. An educational program's quality and relevance can be guaranteed only if the needs of the students it serves are accommodated. To be certain that the program meets these needs, parents and students must be involved in its planning and implementation. One vehicle to achieve this goal is the parent advisory council. Prepared for the parents and other members of communities administering Title I, Migrant Amendment (Title IM Elementary and Secondary Education Act) education and support service programs, this booklet outlines the procedures for organizing parent advisory councils. The

guidelines and regulations governing parental and community involvement in planning and administering Title IM programs are explained. The composition, formation, and duties of parent councils are discussed. Rather than detail comprehensive and finite guidelines, the booklet presents general information to: (1) help parents and community members to better understand the importance of their involvement in planning and administering Title IM programs and (2) show how parents can participate. Identifiers—Ausubel, Research Reports

The value orientations of 39 chemistry teachers and their 120 students were measured and compared to the theoretical, humanistic, and technological aspects of chemistry. A Chemistry Preference Evaluation Instrument containing alternative statements concerning these three aspects was administered to teachers and students. The reliability coefficients (all significant at the .001 confidence level) were: humanistic .85 and .78; theoretical .90 and .85; technological .77 and .72, for students and teachers respectively. Male students scored significantly higher on the technological and female students, on the humanistic. All three aspects of chemistry were correlated to different degrees with the number of courses in university chemistry preparation, number of years teaching experience, and the teaching of biology. A fixed effects factorial model was employed with the students blocked into different levels on humanistic orientation scores and chemistry grades. Three treatments, consisting of humanistic, technological, and placebo introductions to each of five programmed units, were administered. Three way analysis of variance and significant interactions were graphed for analysis. There was no significant difference in learning between experimental treatments or attributable to levels of humanistic value orientation. (Author/LS)

## Identifiers—Research Reports

An attempt was made in this study to determine if there was a need for a sourcebook of the basic mathematics of astronomy for secondary school science teachers. Science teachers involved and interested in the teaching of astronomy were located through letters to the superintendents of the 400 largest school districts in the United States. Names and addresses of 196 teachers were received, and a detailed questionnaire was sent to each to ascertain the need for a sourcebook and to determine relevant subject content. A 71.9 percent return of usable

questionnaire data was received. A definite need was indicated by 116 of the 141 science teachers responding. Topics were selected from those suggested in the questionnaire responses. The teachers were also afforded the opportunity to add topics to the list provided, if they desired. These two were considered. The sourcebook was compiled and arranged in 10 chapters with each containing definitions, formulas, and sample problems. Topics included: Spherical Trigonometry, Spherical Coordinates, Rectangular Coordinates, Transformation of Coordinates, Special Star Positions, Eclipses, Planetary Data, Optics, Physics Laws, and Stellar Data. Identifiers—Physical Science Study Committee, PSSC, Research Reports, Test Critical Thinking Ability Physical Science

The three purposes of this study were (1) to evaluate a paper-pencil test of critical thinking skills using physical science content, (2) to compare the effectiveness of Physical Science Study Committee (PSSC) and non-PSSC physics programs in developing critical thinking skills, and (3) to identify teacher-pupil verbal interaction behaviors that enhance the development of critical thinking skills. Data were obtained by testing approximately 1,000 physics students from 27 high schools with pre- and post-tests of critical-thinking skills. An author-constructed instrument and the Watson-Glaser Test, Form ZM (WGC-TA) were used. Thirty physics classes were observed and teacher-pupil verbal interaction recorded using a modification of the Flanders System of Interaction Analysis. Some of the principal conclusions of the study were: (1) little evidence was given to support the belief that either the PSSC or non-PSSC program was more effective; (2) development of critical-thinking skills was shown to be related to the teacher-pupil interaction behaviors that increase a student's potential for actively participating in the teaching-learning process; and (3) a linear relationship did not exist between the mean growth scores on each test and the verbal behavior of each class; there were few significant differences between the verbal interaction behaviors of PSSC and non-PSSC classes. Identifiers—Research Reports, \*Science Support Scale

The objectives of this study were (1) to assess the effects of teacher science support, as measured by the Science Support Scale (Tri-S scale), on student science support and (2) to gain normative data on the Science Support Scale as an instrument for use with high school students. Twenty-four 10th grade biology teachers were given the Tri-S scale at the beginning of the school year and then blocked into four groups

that ranged from "high" to "low" support of science, with a class of each teacher randomly selected to take the Tri-S scale at the beginning and end of the school year. Data were analyzed by a one-way analysis of covariance, using the pretest as the covariate, to ascertain if varying degrees of teacher science support differentially influenced students' Tri-S scale scores. Cronbach's Coefficient Alpha was computed to obtain reliability estimates on pretest scores. Duncan's Multiple Range Test showed that students of teachers "low" in science support scored significantly higher than students of teachers "high" in science support. The reliability coefficient for the total score was .772. Student perception of meaning did not coincide with subscale meaning. The Tri-S scale does not appear to be an appropriate instrument for measuring science support among high school students. (Author/LS)

Identifiers—Academic Year Institutes, AYI, National Science Foundation, NSF, Research Reports

The Academic Year Institute (AYI), a program sponsored by the National Science Foundation (NSF) as part of its program of education in science, was investigated in depth with respect to its origin, and to the subsequent growth and evaluation of its objectives. Data for this study were collected from government documents, NSF reports, AYI proposals and annual reports of directors, independent studies and published articles, and personal correspondence with people involved in the programs. Pertinent findings of the study included: (1) the AYI program was initially established to provide supplementary subject matter training for secondary school teachers of science; (2) other objectives have evolved since the AYI's inception in 1956 to include: (a) an introduction to new science curriculums and update subject matter knowledge; (b) to train and prepare those teachers with high potential for leadership for positions as college teachers, secondary supervisors, consultants, coordinators, teachers of teachers, and for leadership to bring about in-service training in the local school systems; and (c) to provide an opportunity for teachers to earn an advanced degree. The one category of objectives which was perceived as being of decreasing importance over time was that of increasing the numbers, competence, and supply of the nation's scientists, researchers and technical manpower. Identifiers—Research Reports, Wisconsin

The purpose of this study was to compare selected Wisconsin secondary schools having high percent enrollments in physics with those having low percent enrollments in physics in terms of certain identified school, teacher, and student characteristics. Selected for the study were 17 schools considered to have a high percent enrollment in physics (25 percent or more) and 18 low percent enrollment schools, 36 teachers of physics employed in these schools, 175 physics students, and 173 twelfth-grade students who had not taken physics. Data related to the school and teacher characteristics were collected utilizing questionnaires and college transcripts. Questionnaires and personal interviews provided student data. Among the similarities within each school type were: (1) percent of 1969 graduates who enrolled in vocational-technical, nursing and electronic schools; (2) science course offerings; (3) number of science credits required; and (4) type of physics textbooks used. In terms of the teachers, similarities were shown in: (1) number of areas in science of academic preparation; (2) years of teaching experience; (3) number of National Science Foundation-sponsored institutes attended; and (4) frequency of use of laboratory activities. The physics students were similar in terms of: (1) I.Q.; (2) percent planning four-years of college; (3) reasons for taking physics; and (4) greater proportion being male. Similar characteristics were noted in the non-physics students. (Author/EB)

Descriptors—Chemical Equilibrium, \*Chemistry, \*College Science, \*Computers, Digital Computers, Doctoral Theses, Educational Research, Higher Education, \*Instructional Aids, Kinetics, Science Education

Identifiers—\*Monte Carlo Models, Research Reports

A special purpose digital computer which utilizes the Monte Carlo integration method of obtaining simulations of chemical processes was developed and constructed. The computer, designated as the Monte Carlo Integration Computer (MCIC), was designed as an instructional model for the illustration of kinetic and equilibrium processes, and was constructed from surplus components at a total cost of approximately \$500. The MCIC was shown to be capable of quantitatively simulating microscopic, macroscopic, first-order, second-order, consecutive and catalytic kinetic processes and microscopic, macroscopic, Le Chatelier and catalytic equilibrium processes. Kinetic and equilibrium topics were shown through the consideration of educational materials and the utilization of a questionnaire to constitute an important component of high school and college chemistry courses. However, a literature review indicated that only two reported instructional models were uniquely capable of simulating ten selected kinetic and equilibrium processes. Both of the instructional models utilized Monte Carlo integration techniques and incorporated features that greatly inhibited their pedagogical usefulness. The MCIC was designed to incorporate the rationale of operation of these instructional Monte Carlo models while eliminating many of their pedagogical disadvantages. The MCIC, therefore, appears to represent a significant contribution to the repertoire of instructional models. (Author/MLH)

Identifiers—Research Reports

The purposes of this study were to develop social biology units emphasizing the social problems of pollution, drugs, and disease; and to assess the level of interest and acquired attitudes among students participating in the field test of the units. The three units written were: Pollution: A Threat to Your Community; Drugs, Life or Death; and Disease in Your Community. The units included activities with structured and investigative laboratory experiences. A teacher's guide for each unit was also prepared. A questionnaire was administered to students in two secondary schools. The analysis of data revealed that readability level of the units was appropriate for tenth-grade students. Students gave a positive response to the activities included in the units. The units evoked a positive response among students to help people in the community with particular social problems. Identifiers—Research Reports

The purposes of this study were to construct a general science cognitive preference test instrument, construct an alternative form of the Marks Cognitive Preference Test: High School Chemistry, and to determine the extent of agreement between the two instruments. The instruments were administered to 448 chemistry students. Two shortened forms of the Marks instrument that were prepared were identical in all other manners except the number of responses permitted per item. One was a forced-choice form (CPT) and the other was a multi-option form (CPTMO). The two other instruments, prepared by the investigator, were in the Q-sort form. Each student responded to one sorting task and one of the two shortened Marks instruments. The investigator's instruments were easy to administer and free of the ipsative scoring difficulties associated with the Marks preference instrument. Data were also analyzed to determine correlations among the item responses, verbal reasoning, numerical ability, abstract relations, space relations, spelling, grammar, and the New York State High School Examination in Chemistry. \*Science Education, \*Science Teachers, Surveys, \*Teacher Characteristics  
Identifiers—Research Reports

This study focused on factors which had helped attract faculty members to science teaching careers in 34 public and 33 private predominantly Negro colleges. A questionnaire was mailed to 485 teachers, 78 percent of whom responded. The data were organized for further analysis according to: (1) private-public college affiliation, (2) racial origin, (3) routes taken to enter college teaching, and (4) science teaching fields. The analyses indicated that predominantly Negro colleges usually recruit science teachers from their own region. Negroes comprised less than half (46 percent) of the science faculties in the colleges. These teachers came generally from a lower-middle class background. The decision to become college science teachers took shape over many years. A majority of these faculty members earlier served as high school teachers or in nonacademic positions; few came directly from graduate school. These teachers were generally satisfied with their choice of science teaching and most planned to continue at their jobs. (Author/PS)

Identifiers—\*Physical Science Study Committee, PSSC, Research Reports

The problem in this investigation was to determine if there is a significant difference in the mean level of achievement in Physical Science Study Committee (PSSC) physics between students using autoinstructional materials, supervised by a physics teacher, and students studying PSSC physics without such materials, under the guidance of a physics teacher. Six high schools supplied the 66 students for the experimental group and 105 students for the control group in a six-month study. Students of the experimental group used autoinstructional materials written for parts I and II of the second (1965) edition of PSSC as compared with the control group who were taught PSSC physics by their teacher in a conventional manner. With physics achievement scores for both groups adjusted for covariates, the experimental group demonstrated a statistically higher mean level. From student and teacher responses, several strengths to the autoinstructional mode of instruction were identified. (Author/EP)

Identifiers—Research Reports, \*Science Curriculum Improvement Study, SCIS

This study describes a workshop designed to improve elementary science instruction by en-

couraging teachers to discard the "spectator" mode of participation and become involved in a program designed to be compatible to the objectives and philosophy of the Science Curriculum Improvement Study (SCIS). A random sample of 224 teachers (the experimental group) was encouraged to accept a classroom role which was less dominant than they may have previously favored. The Interaction Analysis of Science Teaching (IAST) instrument was used to evaluate classroom behaviors of both experimental and control groups in a posttest mode. Members of the experimental sample were found to practice more of the desired behaviors than did members of the control sample. Among conclusions, the researcher stated that the experimental treatment did no apparent damage to teacher self-confidence, attitudes toward elementary science, and classroom behaviors. Strong indications existed that the experimental treatment did result in a more student-centered teacher. (Author/CP)

Identifiers—Research Reports

The purpose of this investigation was to study the effect that four alternate types of instruction had on the frequency with which high inquiry questions were asked by preservice secondary science teachers. High inquiry questions involve comparing, explaining, conditional inferring, and evaluating. The four alternative instructional treatments were: placebo, classification, planning, and both classification and planning. For the study, 62 subjects taught a peer microteaching lesson prior to (pretest) and immediately following (posttest I) instruction on questioning. Forty-six of the subjects who continued into student teaching the next semester then taped one of their typical lessons (posttest II). The frequency with which subjects used the question categories during the lessons was compared with pretest data, using analysis of variance and covariance. Among results, data revealed that all treatment groups increased their frequency of high inquiry questions. (Author/CP)

Identifiers—\*Guilford, Project Physics, Research Reports

The purpose of this study was twofold: first, to answer the question of which abilities, from a selected set of 12 abilities from the structure-of-intellect model of Guilford, were related to achievement in Physical Science Study Committee (PSSC) physics, and, second, to determine how the physics achievement prediction properties of these structure-of-intellect factors compared with those of a state-wide test. One hundred and nineteen seniors enrolled in PSSC physics at three high schools in Florida were ad-

ministered tests representing the factors. Multiple stepwise regression analyses were performed to identify which specific factors were most closely related to physics achievement as measured by a PSSC unit test. Similar analyses were performed with scores on the Florida State-Wide Twelfth Grade Test being used to predict physics test scores. Among the results, patterns of structure-of-intellect factors were found related to PSSC physics achievement, although dependent on sex. In comparing PSSC achievement prediction with predictions from the Florida State Test, the structure-of-intellect factors gave significantly greater multiple R values. (Author/CP)

This instructional unit on population issues for use in high school social studies classes has been designed to provide the social studies teacher with a wide variety of instructional options. These are oriented toward providing non-college-bound juniors or seniors with visually stimulating activity-oriented instruction on vital social issues relating to population change. This unit is divided into three chapters. Chapter 1 is a description of the project design and development. Chapter 2 provides a brief overview of the purpose and structure of the unit along with suggestions for using the unit in the classroom. Chapter 3 consists of the instructional unit, which contains a series of activities each including a purpose, learning goals, teaching schedule, teaching aids, learning aids, teaching procedures, student application exercises, notes to the teacher, and student confirmation sheets. A section of student materials is also included along with a teacher idea grabbag. Resource materials are listed throughout the instructional unit and include: filmstrips, reading material, a visual questionnaire, role-playing and slides. A separate pamphlet, entitled "Population Pendulum," is also attached. (TK)

This report is concerned with graduate science and engineering education, particularly dealing with enrollment and with sources of funding. Drawn from the survey of Graduate Science Student Support, analyses reveal distributions of full-time graduate students by source of major support and changing patterns in support and utilization of graduate students and postdoctorals. Using 14 fields of science and engineering, comparisons are made for the 7-year span of 1967-73. (CP)

Identifiers—Naval Academy

This project was the result of the Navy's increasing manpower needs for high quality officers with engineering and science training and the desire to have larger numbers of midshipmen elect engineering and science majors at the Naval Academy. In order to accomplish this, a Strong Vocational Interest Blank (SVIB) was created to aid in selecting Naval Academy applicants with a high likelihood of choosing an engineering or science major. A dichotomous criterion based on midshipmen major selections was used to construct the scale from the SVIB responses of half the 1973 graduating class. Cross-validating with the remaining 1973 graduates, the 1976, and the 1977 classes revealed correlations of .57, .62 and .63, respectively. It was also found that the highest scoring group showed 20 percent disenrollment versus 35 percent for the lowest fifth of the sample. (NTIS/CP)

Identifiers—ERIC SMEAC

The third edition of this directory describes 296 current environmental education programs and projects in the United States. It is representative of an extensive array of efforts in environmental education, with an emphasis on school programs. The directory is divided into three parts; however, there is some variation in format from the preceding two editions. Part 1 contains only update reports of programs and projects described in the 1973 edition. Reports of efforts not included in the second edition are described in Parts 2 and 3. Part 2 describes 104 school-related projects and programs. Part 3 reports the environmental efforts of 75 universities, organizations, research centers, parks, and state plans. Each entry provides the following information: program title, project director—name and address, directory references (Part 1), objectives, location, facilities, activities, available materials and those needed, teacher preparation, evaluation, problems encountered, future plans, and information available through the ERIC system. Programs and projects are arranged alphabetically by state. The appendices include names and addresses of the state coordinators for environmental education. (BP)

Descriptors—Curriculum, \*Curriculum Evaluation, Educational Research, \*Evaluation, Evaluation Methods, Evaluation Needs, \*Science Education, Scientific Attitudes, \*Scientific Methodology, \*Values

This report discusses the importance of five types of evaluation in science and science education. First, evaluation must be recognized as a key process within science, both pure and applied, and must be taught as an integral part of science education. Second, the applications of science must be evaluated not only as a social responsibility and a pragmatic way to select

researchable areas, but also as a scientific matter in itself, and thus a proper component of science education. A third type of evaluation in science education is the analytical approach to values-laden issues in a way that identifies the values' assumptions and proceeds to investigate their evidential status. A fourth important evaluation in science education is the evaluation of science materials; this is similar in some respects to the evaluation of applied science. The fifth way that evaluation enters into science education is in the attempt to list and indoctrinate the student with the supposed values of the scientific approach, such as truth, tentativeness, and criticality. Also discussed is evaluation as a form of knowledge and a form of education, as well as the types of evaluation content and attitudes specifically related to science education curricula. Descriptors—\*Accountability, \*Educational Research, Effective Teaching, Evaluation Criteria, \*Evaluation Methods, \*Performance Based Teacher Education, Research Methodology, Science Education, \*Teacher Behavior, Teacher Influence

Identifiers—Research Reports

This report discusses the fact that many educators are committed to competency based teacher education and teacher accountability systems in spite of the lack of empirical evidence linking teacher behavior to student outcomes in the classroom. Some of the difficulties associated with research in this area are identified as problems in instrumentation, methodology, and statistics. Specific problem areas include the inadequacy of standardized tests, the unknown predictive ability of tests from special teaching units, the problem of building multivariate outcome measures, the problem of measuring the appropriateness of teacher behavior, the lack of experience in choosing an appropriate unit of analysis for describing teacher behavior, and the lack of stability of many teacher behaviors. Further research is recommended on how student backgrounds affect measures of teacher effectiveness, what subject matters should be examined, how normative standards and volunteer teachers affect what we can say about teachers and teaching, how individual students react to teaching skills, how students monitor and interpret a teacher's behavior in ways which may or may not coincide with how educational theorists interpret the phenomenon, and studies on the validity and generalizability of measures of teacher effectiveness. Descriptors—\*Economic Factors, \*Educational Finance, \*Enrollment Trends, Financial Support, \*Graduate Study, Higher Education, Science Education, \*Sciences

Identifiers—National Science Foundation, NSF

This paper contains a report concerning trends of enrollment and financial support in graduate science education submitted to the National Board on Graduate Education. For the study, three surveys were utilized: (1) National Science Foundation's (NSF) annual surveys of graduate student support, fiscal years 1968-73; (2) National Research Council Doctorate Records File, fiscal years 1968-73; and (3) American Council on Education, "A Rating of Graduate Programs" (prepared by Kenneth Roose and C. J. Anderson). In this paper, reference is made primarily from the NSF surveys, for they enable analyses by academic department and offer an eight-year longitudinal basis. Trends in graduate enrollments offering statistics on those departments rated as highest, next highest, and so forth by Roose-Anderson ratings are reported. Other topics include sources of student support and distributions of types of financial backing. Appendices present data taken from NSF Graduate Student Surveys. (CP)

Identifiers—\*National Institutes of Health, NIH

The scope and magnitude of research supported by the National Institutes of Health (NIH) are cited as prime factors in interest of Surveys of Graduate Science Student Support. The research component of NIH is carried out primarily in the university community and, in 1974, involved 9,800 principal investigators with \$862 billion dollars. NIH research and development funds account for 40 percent of all federal funding compared with 20 percent from the National Science Foundation. Representative numbers of M.D.'s, Ph.D.'s, and graduate students involved in biomedical research projects are shown, using 1971 as the reference year. (CP)

Descriptors—\*Doctoral Programs, \*Educational Finance, Engineering, Financial Support, \*Graduate Study, Higher Education, Science Education, Sciences, \*Surveys, \*Validity

Identifiers—National Institutes of Health, National Science Foundation, NIH, NSF

In this paper, the steps implemented by the National Institutes of Health (NIH) and the National Science Foundation (NSF) to upgrade the quality of the 1973 Graduate Science Student Support Survey are cited. Changes which were incorporated into the survey were intended to increase the scope and accuracy of data collected. To verify the coverage, a list of the institutions that

made up the population surveyed in 1973 was compared with lists of Ph.D.-granting institutions maintained by federal agencies and professional associations with an interest in higher education. Discrepancies were checked by telephone inquiry and adjustments in the survey base were made. The second major component of the study was to reconstruct the 1973 survey responses from departmental records for a sample of departments and to compare the resulting data with that which had been reported by the department. Also, selected student interviews were held in order to make comparisons with departmental records. (Author/CP)

Descriptors—Doctoral Programs, \*Educational Finance, Engineering Education, \*Enrollment Trends, Financial Support, \*Graduate Study, Higher Education, Science Education, \*Surveys Identifiers—\*National Science Foundation, NSF

In this paper a review of the major findings of the 1973 Survey of Graduate Science Study Support is presented. Results are compared with similar studies which go back through 1967 and a survey conducted in the fall of 1974 of 360 graduate science departments. From the studies, it was found that graduate science and engineering enrollment increased in the fall of 1974 for the first time since fall 1970. From fall 1971 to fall 1973, every area of science showed a decrease in enrollment, except the life sciences and psychology in which enrollment has continued to rise. During this period, the number of full-time students dependent on federal support declined from 47 to 26 percent of the total enrollment. By analyses of the surveys conducted between 1967 and 1973, an overall decline of 5 percent in full-time science and engineering enrollment was noted. Also, the number of federally-supported students was reduced by one-half. Academic science obligations decreased by 18 percent below the 1967 level in constant dollars. (Author/CP)

Descriptors—\*Doctoral Programs, Educational Finance, \*Enrollment Trends, \*Financial Support, \*Graduate Study, Higher Education, Manpower Development, Science Education, \*Surveys

Identifiers—\*National Institutes of Health, NIH

To the National Institutes of Health (NIH), the federal agency primarily responsible for the conduct of biomedical research, the Survey of Graduate Science Student Support and Postdoctorals is important because it provides information concerning bioscience research manpower projections. To policymakers in NIH, the two main components of the survey enrollment and financial support, are of great interest. This paper deals primarily with two assumptions which can be made concerning enrollment and financial aid: (1) first-year enrollment is a predictor of Ph.D. output, and (2) support affects both graduate enrollments and Ph.D. production. Data from the Survey of Earned Doctorates tend to provide a correlation for the first assumption, although the ratio of Ph.D.'s per 100 first-year graduate students has declined from 31.1 in 1961 to 25.0 in 1967. This factor may be a result of an increase in the time needed to complete the degree, for the survey is based on a six year time lag. The author also states that assumption two, although not as easily illustrated, appears to hold a positive correlation. (CP)

This publication is a catalogue of resources addressed specifically to school teachers. The essence of the man-made environment is what man builds—cities, streets, houses, parks, and the spaces that connect them. Thus, the focus of the materials in this sourcebook is on what man builds, why he builds, how he builds, and how he and the environment affect one another. Included are interdisciplinary materials for use in both elementary and secondary schools. Section 1 contains information on reference material for the teacher in developing and conducting a program on the built environment—teacher guides, resource and training centers, and background materials. The second section describes learning resources for use in and out of the classroom. Included are materials that pertain specifically to the built environment and other more comprehensive program which give a thorough treatment of the built environment as an essential component of the total environment. The third section contains descriptions of some current projects on the environment for which no curriculum materials are available but which may provide additional teaching and learning suggestions. Identifiers—Aquaculture, Biofuels, Wind Energy

SE 019 340

This is a comprehensive, fairly technical book about renewable forms of energy—solar, wind, and biofuels. The biofuels section covers biomass energy, agriculture, aquaculture, alcohol, methane, and wood. The focus is on small-scale systems which can be applied to the needs of the individual, small group, or community. More than one-fourth of the book is devoted to reviews of books and hardware sources. Hundreds of illustrations and a dozen original articles are used to describe the workings of solar water heaters, space heaters and dryers, waterwheels, windmills, wind generators, wood burning heaters, alcohol stills, and methane digesters. The final section of the book focuses on the need for energy conservation and some of the problems and potentials of integrated energy systems. (Author/BT)

Descriptors—Community Involvement, Concept Teaching, \*Curriculum Guides, Elementary Secondary Education, \*Environmental Education, \*Instructional Materials, \*Interdisciplinary Approach, Natural Resources, \*Pilot Projects, Program Development, Resource Guides, Resource Materials, Teacher Responsibility Identifiers—Elementary Secondary Education Act Title III, ESEA Title III, Project ICE, Wisconsin (Madison)

This handbook has been prepared to provide suggestions to school districts for implementation of environmental education programs. Initially, environmental education is defined as "a process of learning about man's interrelationship with natural and man-made surroundings, developing skills and values for resource conservation...fostering motivation to apply skills and attitudes to assure our survival and to improve the quality of life." Responsibility for teaching environmentally rests with each teacher, and involves linkage of inside and outside lessons to environmental concerns. Environmental concepts permeating the Project I-C-E (Instruction-Curriculum-Environment) curriculum series are given with a simplified student version. Suggestions for active involvement of teachers include group recollections, brainstorming, nosebag charades, audiovisual aids, indepth problem exploration, simulations, role playing, field activities, workshops, acclimatization, and reaching out. A sample lesson from the Project I-C-E curriculum guides illustrates the format of the K-12 series, and its adaptability to various situations. Approaches for utilization of community resources consist of progression, team teaching, workshops, community inventory, and field trip procedures checklist. Appended materials include curriculum and field activity guides, slide/tape programs, films, media catalogues, and evaluation instruments available from Project I-C-E. (BP)

**Document Not Available from EDRS**

Descriptors—Community Colleges, Curriculum, \*Energy, \*Environmental Education, Environmental Research, Facilities, \*Higher Education, Manpower Needs, \*Master Plans, Research, \*State Programs

Identifiers—\*Illinois

This master plan for environmental and energy higher education in Illinois is a direct result of a mandate from the Illinois General Assembly. To prepare students to confront our nation's environmental problems, each university will submit a management and development plan, designed to preserve existing environmental values and provide improvements in the physical environment of that institution. Coordinated efforts, increased opportunities for study, evaluation of job market demands, and specific requirements for interdisciplinary training are suggested to meet the demands of career orientation in the environmental/energy area, and provide wider exposure of environmental affairs. Various university programs in the environmental fields are described. Establishment of Environmental Resource Centers, a responsibility of each institution of higher education, offers a valuable opportunity to the community college to relate its efforts to the community it serves. An examination of environmental training efforts by Illinois community colleges and course descriptions is provided. One section is devoted to manpower surveys and employment projections (1980) in the pollution control and abatement areas of air, noise, pesticides, public water, solid wastes, and waste water. An extensive inventory of current energy research and development projects, and available facilities for research in Illinois are provided. (BP)

The Curriculum and Research Development Center of Indiana State University sought to determine the number of high schools in Indiana that teach environmental education in some form. A questionnaire was mailed in February 1974 to the principals of all senior high, junior/senior high, and K-12 schools. The investigators were interested in finding out how much environmental education was offered, content areas, how it was taught, subject matter necessary for teacher preparation, priorities of environmental problems, and importance in the high school curriculum. A few of the major findings were: 6.5 percent of the 366 schools offered courses designated as environmental education; 21 percent offered courses although not so designated. Class enrollment ranged from 10 to 60 and average number of course offerings was there. Subject areas most often taught included water and air pollution, forest conservation, soil conservation, and wildlife conservation. Topic emphasis lead researchers to conclude that in Indiana high schools, conservation was environmental education. Recommendations called for the implementation of a nationwide environmental education plan. Suggestions include a national conference of leaders to give direction to curriculum efforts, a test to students to determine environmental knowledge, inservice and preservice workshops, textbook revisions, etc. An annotated bibliography is provided. **Identifiers**—National Science Foundation, NSF

This report reveals that federal research and development obligations are scheduled to rise from \$17.4 billion in fiscal year 1974 to an estimated \$18.9 billion in fiscal year 1975 and to \$21.7 billion in fiscal year 1976. The gains in funding are 8.4 percent for 1975 and 14.5 percent for 1976, both of these the largest relative rises in the period between 1966 and 1976. The chief impetus to growth in 1976 is derived from programs related to defense and space. Applied research will be more heavily funded in 1976 than will basic research. For the first time since 1971, engineering will be the leading field of science in federal research support, with the life sciences in second place. A few data are provided concerning the geographical distribution of funds; more comprehensive data are contained in "Federal Funds for Research, Development, and Other Scientific Activities." Financial statistics and brief program descriptions are given for the funds provided to the following agencies: the Department of Defense; the Department of Health, Education, and Welfare; the National Aeronautics and Space Administration (NASA); the Energy Research and Development Administration (ERDS); the National Science Foundation (NSF); and the Department of Agriculture. **Identifiers**—\*Europe, Research Reports

The study was prepared, at the request of UNESCO, by the European Federation of National Associations of Engineers (FEANI), an organization grouping the engineering associations of 18 countries and including 650,000 engineers. The differences in the types of engineering programs and graduation requirements of the various countries are examined, along with the differences in terminology and definitions used in the engineering education systems. The qualifications for becoming a professional engineer and the standards of engineering societies are reported, in addition to the role of the engineer in the industry of each particular country. The report concludes with an examination of the common denominators of the Continental and the British engineering education systems and discusses the possibilities of applying the European experiment of FEANI to other continents. **Identifiers**—\*Rockefeller Foundation

Five universities receiving aid from the Rockefeller Foundation are discussed. The American University has had difficulty initially interdisciplinary environmental studies. Problems include insufficient financial independence, autonomous faculty nature, seniority system, students, and departmental structure. Penn State's efforts involve development of the Office of Environmental Quality Programs, which recognizes environmental issues, determines goals, and assimilates people and resources to accomplish

tasks. The University of Michigan's Institute for Environmental Quality focuses resources on problems associated with improving the quality of the environment through support of multidisciplinary teaching, research, and service activities. Utah State's Environment and Man Program provides faculty, staff, and students with interdisciplinary research and educational opportunities to study environmental problems in Utah and the Rocky Mountain Region. Environmental studies at the University of California, Davis, center on ecology and involve undergraduate and graduate instruction, research, and public service. Recommendations for initiating environmental education and research include continuity of tenured faculty, interdisciplinary program concerns, administrative support, and campus-wide environmental study units. **Identifiers**—National Science Foundation, NSF

This report summarizes the data about minority group scientists and engineers obtained as part of a national survey of scientific and engineering personnel in 1972. Information pertaining to minority group college students enrolled in engineering is also discussed briefly. Within the 1972 scientist and engineering populations, racial minority group members represented about 4 percent, or 53,000 of the 1.3 million total scientists and engineers. Racially, 60 percent were of Oriental descent, 30 percent were black, and the remainder were members of other nonwhite races. Also reported are statistics on minority group scientists and engineers pertaining to the following areas: geographic distribution, age characteristics, educational characteristics, fields of study, professional identify relationships, and the education process for black engineering students. **Descriptors**—Educational Research, \*Elementary Education, Elementary School Science, \*Science Education, Science Programs, Science Teachers, \*Secondary Education, Secondary School Science, \*Surveys, Teacher Education

**Identifiers**—\*Iowa, Research Reports

This survey of K-12 science education in Iowa presents descriptive statistics in the following areas: (1) organization of the K-12 educational systems - including a description of the school districts and governing systems; (2) teacher education and certification - including a survey of science teachers in Iowa and teacher preparation institutions; (3) the Iowa classroom teacher - describing the educational levels and teaching experiences of Iowa science teachers; (4) program of instruction - describing state requirements for science education in grades K-12; (5) inservice education - describing inservice programs for science teachers and the monies budgeted for this purpose; and (6) implications for programs for the improvement of elementary and secondary science education in Iowa - describing some of the concerns brought out by the statistics of this survey. One concern is that the large number of teacher preparation institutions in Iowa have widely different programs and produce teachers with widely different preparations. (MLH)

**Identifiers**—\*Mathemagenic Behavior, Research Reports

This report discusses mathemagenic behaviors, which are activities that promote learning. During instruction these are the activities that learners perform when confronted with instructional stimuli. Three groups of hypothetical mathemagenic behaviors are discussed: translation, segmentation, and processing. A review of the literature on mathemagenic behavior, with 57 references, is given, followed by a discussion of the types of instructional materials and methods which have proved useful in integrating mathemagenic research with instruction in science. One implication of this research is that active behavior on the part of the student is essential. Also discussed are ways to translate physical stimuli into effective stimuli by the incorporation of the proper amount of structure into classroom activities, and ways teachers can capitalize on mathemagenic behaviors, such as using questioning techniques and activity-oriented laboratories. This report presents national statistics on federal aid to graduate students in the sciences and engineering for fall, 1973. Data were provided by every institution with a doctoral program in science or engineering. The characteristics of graduate enrollment examined in this report are: enrollment status (full and part time); distribution among fields of science; level of study (first-year or beyond); citizenship (U.S. and foreign); control of institution (public or private); and sex of graduate students. Data on types and sources of major support were provided for full-time students only. Postdoctoral utilization by field of science was examined in terms of type and source of support and year of the Ph.D. Appendices include notes on general methodology, classification of institutions in the survey, detailed statistical tables, and a reliability and validity assessment of the 1973 survey. The curriculum presented in this document was created through the auspices of Louisiana State University's Center for Wetland Resources. Need for a program to train qualified personnel for the transportation segment of the mineral and oil industry was shown by a shortage of skilled workers. With the cooperation of a local high school, a one-year nautical science program was devised. Initial participation involved 27 students. Outlines appearing in the curriculum guide list topics for a two-year, 11th and 12th grade, program on marine transportation. The use of guest speakers and field trips is advocated. Bibliographies are included for those wishing additional information on topics covered. (NTIS/CP)

This report presents the set of evaluation guidelines and instruments prepared for the evaluation of the Comprehensive Program for Science Teacher Education at the University of South Dakota. The participants in the study were inservice secondary science teachers enrolled in the Comprehensive Program. The participants were pre- and post-tested in: science subject matter competency; understanding of science; attitudes toward mathematics, science, science teaching, and laboratory work; and the nature of the science classroom and laboratory activities which the participants feel should be used for secondary school science instruction. The data resulting from these tests are reported and analyzed, along with an extensive profile of the participants' teaching experience. Among the conclusions derived from the data were: little change was noted on the participant attitude measures used as pre- and post-tests; in general, participants were pleased with the program; the participants entered the program in generally good agreement with science educators as to the types of activities which should be used for secondary science instruction, and the program strengthened this agreement; and the participants showed significant progress in subject matter competencies by the completion of the program. **Identifiers**—Research Reports, \*University of South Dakota

This report presents data collected for the evaluation of the Comprehensive Program for Science Teacher Education at the University of South Dakota and conclusions derived from these data. The participants in the study were inservice secondary science teachers enrolled in the Comprehensive Program. The participants were pre- and post-tested in: science subject matter competency; understanding of science; attitudes toward mathematics, science, science teaching, and laboratory work; and the nature of the science classroom, and laboratory activities which the participants feel should be used for secondary school science instruction. Resulting data are reported and analyzed, along with an extensive profile of the participants' teaching experience. The primary aim of the Comprehensive Program was to develop the subject matter and mathematics competencies required to teach modern science courses. Analysis results of the data collected in this evaluation show that this objective was met. As a result of this evaluation, the program focus at the University of South Dakota has been changed to be a much more direct collaborative effort with school districts within its region. This involves creating awareness of newer curricular materials, helping districts with adoption decisions, and then assisting with implementation. (MLH)

This report is one in a series about the status and characteristics of the science and engineering populations. Data for the study were generated by a 1970 national survey by the Bureau of the Census and updated in 1972 by the National Science Foundation. Presented in this report are selected economic characteristics of persons defined as engineers or scientists—the occupation in which they were employed, their tenure, and means of acquiring their position. Also shown are their statuses prior to acquiring their job, the tendency to hold a second job, and the basic annual salary in their primary job. A limited number of profiles concerning demographic, education, and economic characteristics are also included. (CP)

Fifteen research reports related to mathematics education are abstracted and analyzed. The reports abstracted were selected from nine educational journals including several published outside the United States, and deal with a wide variety of topics. Three articles deal with concept formation, three with task analysis or instructional sequencing, and two with other aspects of instruction as it relates to the learning process. Two articles deal with the interaction of personality variables with decision making and performance, respectively, one with testing, and one with student evaluation of teaching. Other reports ab-

stracted concern ability, dyscalculia, and evaluation of a kindergarten program. Research related to mathematics education which was reported in RIE and CIJE between January and March 1974 is listed. (SD)

Descriptors—Autoinstructional Aids, \*Cognitive Development, \*Concept Teaching, Earth Science, Elementary Education, \*Elementary School Science, \*Instructional Materials, Science Education, \*Trees

Identifiers—Piaget (Jean)

The autoinstructional activities included in this booklet were designed to be used to teach fifth-grade students the science concept "tree" at the formal level of attainment. The instructional strategies used in the lessons had been shown in previous studies to facilitate concept learning when used singly or in combination with one another. The strategies used are: (1) use of a definition, (2) empirical selection of concept examples through an instance probability analysis, (3) use of rational sets of examples and nonexamples, (4) pairing of examples with nonexamples, (5) emphasis of relevant attributes, (6) teaching of strategy, (7) immediate feedback, and (8) active involvement by the student. Instruction was divided into two parts, each part being a lesson. The first lesson presents the defining attributes and teaches children labels for defining attributes. The second lesson presents the definition of "trees," presents a rational set of examples and nonexamples, and teaches a strategy for evaluating whether or not an instance is an example of the concept. Active involvement and immediate feedback are provided for the student in both lessons. (Author/CP)

Identifiers—National Science Foundation, NSF

This study contains analyses of trends in the level of university research and development expenditures in the sciences and engineering from 1964 through 1973. The report is divided into three main sections: (1) current research and development expenditures in the sciences and engineering; (2) capital expenditures for research, development, and instruction in the sciences and engineering; and (3) current direct expenditures for instruction and departmental research in graduate-degree-granting institutions in the sciences and engineering. Statistical tables show current research and development allocations according to: (1) source of funds, (2) type of research and development activity, (3) field of science, (4) type of control, (5) type of institution, (6) geographic distribution, and (7) concentration of research and development expenditures. The study also distinguishes between universities and colleges and federally-funded research and development centers administered by universities and colleges in the reporting of data. (Author/CP)

This report is an account of the development of a minicourse program for the purpose of college-level introductory biology instruction. The complete implementation effort is described from an examination of the program which the minicourses replace, to the proposals concerning implementation of the new curriculum. Sections of the report are devoted to exploration of other modular programs and to the creation of each particular biology module. This work, along with reference materials cited, should provide a helpful guide for the creation and implementation of an introductory biology program with a minicourse format. (CP)

Identifiers—NASA, \*National Aeronautics and Space Administration

This volume represents the collection of papers and panel discussions of the (NASA)/University Conference held in October 1974. The purpose of this conference was to bring together representatives from universities, government, and industry to discuss and assess trends and opportunities in aeronautical engineering education with the expectation of suggesting options and directions for future programs. The conference was held in three sessions—sessions I and II being comprised of 15 papers under the headings of the State of Aeronautics and the Education of the Engineer and Technical Trends in Aeronautics. Session III consisted of three panel discussions. The topics were: (1) University/Government/Industry Relations, (2) University Research in Aeronautics,

and (3) Curriculum for Modern Aeronautics. (CP)

Identifiers—National Science Foundation, \*Thirteen College Curriculum Program

This volume of biology units has been prepared with an introductory college level audience in mind. The intents have been to offer a variety of topics drawn from several sources and to enable instructors to use the materials at the level of their students. The units not only encourage, but some require, inductive teaching methods. Topics are: (1) The Nature of Science; (2) Evolution; (3) The Cell; (4) Reproduction, Growth, and Development; (5) Genetics; (6) Metabolism and Regulatory Mechanisms; (7) The Variety of Living Things; and (8) Ecology. Also included in the work are teacher resource materials involving curriculum planning, teaching suggestions, evaluation techniques, and bibliographies of topics covered. (CP)

Identifiers—Minnesota Research and Evaluation Project, \*National Science Foundation, NSF, Research Reports

Focused on the impact of the institute program for inservice teachers sponsored by the National Science Foundation, this report summarizes the findings of 138 documents (research and evaluation studies). Documents reviewed were grouped into dissertations and theses (63), journal articles (41), interim or final reports (23), papers presented at professional meetings (9), and books (2). Information contained in these documents was summarized in terms of six subcategories: Characteristics of Participants, Subject Matter Competence, Teacher Attitudes, Teaching Behavior, Understanding of Science, and Career Effects. Examples of studies fitting into each of these categories were selected for illustrative purposes. In addition to the discussion provided for each of the subcategories, a four-page summarization is also included. (PEB)

Spons Agency—National Science Foundation, Washington, D.C.

Pub Date 71

Note—49p.

Available from—Association of American Geographers, 1710 Sixteenth Street, N.W., Washington, D.C. 20009 (1-9 copies \$1.50, 10-99 copies \$1.35, 100 or more copies \$1.20)

Document Not Available from EDRS

Descriptors—Change Agents, Ecological Factors, \*Ecology, Food, Higher Education, \*Human Geography, \*Human Living, \*Physical Environment, \*Population Growth, Resource Materials, Supplementary Reading Materials, World Problems

Man and nature is the theme of this resource paper which is part of a series designed to supplement existing texts and to fill a gap between significant research in geography and readily accessible materials. The approach followed in the paper is loosely dialectical: the intent is to understand man and nature by posing one concept against the other. The paper begins with defini-

tions, setting nature and man side by side. Then man, as a biological organism, subject to nature, is contrasted with man as agent for change, subduing nature. Next, the theory of how man structures his world is taken up, showing how man arranges elements and events of nature to conform to his own sense of order. The consequences of man-made schemata imposed on nature are noted. Lastly, the solution to the problem of a deteriorating environment and its threat to livelihood and social harmony is measured for success in terms of improvements in the means of food production which allow rapid gains in population. Concluding remarks emphasize the open-ended nature of the original theme of man and nature. A bibliography is included. (Author/KSM)

Document Not Available from EDRS

Descriptors—\*Citizen Participation, City Planning, Community Action, Community Control, Community Development, \*Decentralization, Geographic Concepts, \*Geography, Geography Instruction, Higher Education, \*Human Geography, Planned Community, Political Science, \*Resource Materials, Urban Studies

This resource paper on the subject of citizen participation, decentralization, and advocacy planning is part of a series designed to supplement undergraduate geography courses. The approach of the paper de-emphasizes inventory or case study reviews of specific participation or advocacy planning projects for a more general conceptual discussion of the issues. Chapter 1 analyzes the various political theories of citizen participation in public affairs. Chapter 2 briefly describes the federal government's attempts to induce greater citizen participation through such programs and offices as the Tennessee Valley Authority, the Office of Economic Opportunity, and the Model Cities Program. Chapter 3 examines the various forms of government decentralization, emphasizing the theories of community control and concentration. Community control theory suggests the complete transfer of authority and decision-making power, while deconcentration seeks to move government agencies to the local level in order to facilitate the delivery of services. Chapter 4 analyzes the principles and different models of advocacy planning. (Author/DE)

Document Not Available from EDRS

Descriptors—Conservation (Environment), \*Ecology, Environment, \*Environmental Education, Geographic Concepts, \*Geography, Geography Instruction, Higher Education, \*Human Geography, \*Resource Materials

This resource paper on the interrelations between man and the environment is part of a series designed to supplement undergraduate geography courses. It outlines an approach to man-environment problems. Chapter one describes how an environmental perspective relates to the study of human geography. Chapter two describes the main transactions between man and the environment. Under consideration are the adaptive relationships between the environment and individual human beings, human groups, technology, and

language. Chapter three relates man's distribution and economic activities to the functioning of the natural and modified ecosystems of the earth. The authors conclude that a nonexploitive relationship between man and the environment can be achieved only when we have discovered a system of management sophisticated enough to cope with the accelerated pace of technological innovation. **Descriptors—**\*Data Analysis, Data Collection, Geographic Concepts, \*Geography, Geography Instruction, Higher Education, \*Maps, \*Map Skills, \*Resource Materials

This resource paper on thematic cartography is part of a series designed to supplement undergraduate geography courses. It reviews recent developments in the field and identifies problem areas which warrant future attention. Cartography is defined as both the conceptual, problem-oriented research and the technical processes of map making. It explicitly introduces the graphic model nature of maps and the resulting implications for map-making methodology. The cartographic process is viewed as a source of transformations involving the selection of data from the real world, the transformation of these data into a graphic map, and the retrieval of information through an interpretive map reading. Chapter 2 reviews recent trends and developments in data collection. Chapter 3 examines recent trends in map production efficiency and effectiveness. Chapter 4 analyzes the visual, quantitative, optical, and tactical procedures for reading today's highly sophisticated maps. Chapter 5 describes the future direction of cartography as a scientific discipline. Also included is a list of selected readings. (Author/DE)

Three studies examine the impact of different types of television content on the social behavior of children at various ages. The studies represent research into the interrelated problem of the processes involved in media effects and age-related differences. In the first study an action-adventure program, in which a character's reputation and loved ones were threatened, was edited into two versions and shown to two sample groups. In one version the hero responded with physical aggression and in the other with constructive nonviolent efforts. The second study focused on the effects of ambiguity in the dramatic context for modeled aggressive behavior. One version of a program presented the aggressive character as unequivocally evil, while a second version presented scenes which made him appear both good and bad. The third study examined how the dramatic context in which aggression appears can modify the negative effects of aggression. Results indicate that the character who uses constructive coping strategies may have more impact on young viewers than violent

character; that the dramatic context of a program can modify the impact of the aggressive action; and that if young viewers see an aggressive character with both good and bad qualities, the impact of his aggression is greater. (Author/DE)

Written to discuss questions often raised about common (public) schooling in the United States, this book examines issues surrounding the founding of the Department of Education, encompassing a period from the 1830s to the present and focusing on the 1860s. At that time, the common school movement promised that education would be a means for social and individual improvement. Thus, the issues revolve around the hopes, conflicts, and unexpected outcomes of the effort to build a federal bureau of education. Topics covered in the book are: (1) School Reform through Centralization: The Lure of Homogeneity; (2) Campaigns for a National Bureau of Education: Response to Crisis; (3) Uncertain Mandate: A Legislative History; (4) Henry Barnard and the Department of Education: Old Wine, Old Wineskins; (5) From Department to Bureau: The Politics of Dream Deferral; (6) A Federal School Bureaucracy: Permanence at a Price; and (7) Barnard's Bureau in the 1970s: Notes for the Future. An occasional, independent publication of the Unesco Regional Office for Education in Asia contains reviews of recent publications and studies, brief reports on programs and projects, and notes on Asian documents related to education. The first section of reviews of recent publications and studies examines documents on education in Bangladesh, educational wastage in Burma, non-formal education in India, the management of a large school building program, education in five Asian countries, and rural youth and out-of-school education. The second section presents brief reports on programs and projects, including generating employment for the educated in India; 19th century missionary schools in Indonesia; the status of employment in Indonesia; educational facilities in Iran; and educational statistics of Thailand. A brief annotated list of documents related to education compiled from a selection of entries in recent quarterly Accession Lists of the Unesco Regional Office Library concludes the publication. **Identifiers—**\*UNESCO

A regular report of Unesco activities is made by Amadou-Mahtar M'Bow, Director-General of UNESCO. The report is prefaced by his introduction in which he reviews the organization's crucial situation in 1974 and offers an evaluation of it. The General Conference showed evidence that member states place great hopes in UNESCO, and that strict adherence to democratic rules of order causes problems for the international organization. He points out UNESCO's problems that need to be focused on in the future, and relates urgent measures taken during the year for UNESCO's financial difficulties. Topics contained in the report are: (1) execution of UNESCO's program: education, natural sciences and their application to development, social sciences, communication, international standards, and general resolutions; (2) relations with member states and other international organizations; (3) administration; and (4) conferences, documents, and publications. **Identifiers—**Quality of Life

Designed as a resource guide for educators and curriculum developers, this book formulates the knowledge base for school curriculum in population education; presents a body of concepts and data pertaining to the Asian region which is useful as a basis for selected aspects of a curriculum in population education; and provides stimulus, and possibly serves as an exemplar, for the development of national source books. Five paperback books comprising this source book are contained in a cardboard cover. The first book introduces the source book. The second book is an orientation to population education and examines the nature of population developments in Asia and the nature and role of the knowledge base in the curriculum development process. The third book presents a general picture of the demographic situation in Asia in an historical context and introduces the users to selected demographic concepts and methodological tools. The fourth book explores the interrelationships between population growth and selected issues of socioeconomic development in the region. The fifth book contains reference tables and charts, bringing together statistical data and materials which may be helpful as basic reference materials for the content areas treated in other books. **A Conceptual Framework for Elementary Social Studies Curriculum and Instruction.**

North Carolina Univ., Greensboro. Humanistic Education Project.

Pub Date 1 Sep 74

Note—26p.

**EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage**

Descriptors—Conventional Instruction, \*Curriculum Development, \*Educational Development, \*Educational History, Educational Philosophy, \*Educational Theories, Elementary Education, Humanistic Education, Inquiry Training, Models, Progressive Education, \*Social Studies, Student Centered Curriculum, Teaching Methods

A comprehensive, consistent framework for investigating, defining, clarifying, and understanding social studies curriculum and instruction is provided. The framework, descriptive in nature, is comprised of five conceptually distinct historical traditions in elementary-level social studies: (1) social studies as knowledge for the sake of knowledge, (2) social studies in the child-centered tradition, (3) social studies as reflective inquiry, (4) social studies as structure of the disciplines, and (5) social studies as sociopolitical involvement. The five traditions were identified and developed through a systematic search of the literature in social studies education from the 1890s to the present. Recognizing that specific curricular components determine to a large degree the direction of social studies education, the following six curricular components were selected and used in delineating the traditions constituting the framework: (1) citizenship education; (2) student maturity; (3) selection of content; (4) use of content; (5) significant others including publishing companies, social studies projects, methods teachers, and community members; and (6) evaluation of teachers and students. Each component is discussed in light of the role it has played in a particular tradition. (Author/DE)

Descriptors—\*Classroom Games, Economic Factors, Educational Games, Educational Objectives, \*Educational Research, Elementary Secondary Education, Institutional Role, Institutions, Management Games, Research Problems, \*Simulated Environment, Simulation, Social Studies, \*Values

A microeconomic simulation game, called Micro-Economy, is discussed. The game approach was developed to provide students and educators an opportunity to express the aspirations, values, and principles of the people living in an environment. By following a microeconomic model, Society School, students create microinstitutions for their society at school. Several uses of the simulation in various schools are reported. Some noted qualities of the model are (1) teachers will find this model attractive because it allows them to bring real world experiences into the classroom and to demonstrate the connection between competency in traditional language and

mathematics skills and success in the social system that evolves; (2) the program gives students access to new ways to think about themselves and their own competencies; (3) the model offers grounding in commercial, legal, and political practice; and (4) the central unity of the experience of institution building emerges within the domain of human values. Possible research issues are given for each characteristic. Micro-Economy is available from Harcourt Brace Jovanovich's Center for Curriculum Design for \$39.00. The game and its development are described in "The Micro-Society School: A Real World Miniature," Harper and Row, 1973, \$7.95 hardcover, \$2.50 paperback. (Author/ND)

This geography instructional manual aids teachers in the preparation of teaching geography courses for both elementary and secondary grades. The authors believe that geography has an important part to play in the process of education, with an emphasis on the ideas as well as the facts in the field of geography. The first part of the book examines specific ideas and skills which are related to geography, including a review of recent developments in the subject, and of their applications in the schools. The second part deals with practical matters such as syllabus and course planning, lesson preparation, audiovisual aids, field work, and the geography room. Specific chapter titles include: (1) Geography in the Schools; (2) Teaching, Learning, and Geography; (3) Developments in Geographical Methodology; (4) Running the Geography Department; (5) Planning the Program; (6) Examination and Assessment; (7) Geography Room Design and Equipment; (8) Audiovisual Aids; (9) Field Work; (10) New Approaches to Familiar Themes; and (11) Looking Ahead. A bibliography concludes the document. (Author/JR)

Descriptors—Annotated Bibliographies, \*History Instruction, \*Inquiry Training, Instructional Materials, Interdisciplinary Approach, Local History, Primary Sources, Revolutionary War (United States), Role Playing, Secondary Education, \*Social History, \*Social Studies Units, Teaching Techniques, \*United States History

This paper is one of a series of ERIC/CHES publications intended to give practical tips on teaching various topics and disciplines in the precollege social studies curriculum. The tips offered in this publication, written by seven authors, are intended to help teachers deal with both content and teaching strategies in American history. Each of five actual lessons provides examples of how to incorporate nontraditional subject matter using a structured inquiry approach into the regular American history curriculum. The structured inquiry approach requires the teacher, rather than the student, to select the content of the lesson and to predetermine the structure of the learning activity. The teacher does not have final answers but has a framework

in which most student inquiry can occur. Chapter 1 introduces the work by examining reasons and processes for teaching history. Chapter 2 uses a role-play activity for examining the social history of American industrialization. Chapter 3 presents an interdisciplinary social science approach to the study of the American Revolution. Chapter 4 uses comparative data from other societies to illuminate the issue of American slavery. Chapter 5 describes several methods for active inquiry into local history. Chapter 6 provides short activities for developing information search skills. Chapter 7 contains an annotated list of American history resources including games, audiovisual materials, collections of documents, journals, and teacher resources. (Author/DE)

Focusing on Rumania, this paper studies the relationship between the values system of the technological era and the implications for education. With increasing industrialization and technological development, many societies have emerged as highly utilitarian in which all values are subordinated to acquisitive behavior, materialism, and individual egotistic achievement. Yet the fundamentally antiutilitarian ethical, Marxist humanism retains as its highest ideal the transformation of man from a means into a goal. A survey of Rumanian youth indicates a commitment to the humanist ideal of socialism based on equity and social justice. According to Marxist humanism, the principal requirements of contemporary education should be the stimulation of creativity within the student, placing him in a position of choice and guiding his free and conscious option toward the most advanced alternatives, the increase in the role of self-education, the education for many-sided student personalities and their fulfillment, the permanent assertion of freedom and autonomy of personality as the basis for socialization, and the development of human values. Research into children's responses to constructive and aggressive behavior in a television drama is provided. This study is also reported in related document SO 008 573. A 22-minute action-adventure television program depicting an intense interpersonal conflict was edited into two versions. In one version the hero responded with physical aggression and in the other with constructive nonviolent efforts. Fourth, seventh, and tenth graders viewed one of these versions or a wildlife documentary. They were then given an

opportunity to either "help" or "hurt" a peer who was completing a task. At all three grade levels, children who had seen models of constructive coping showed greater frequency and duration of prosocial responding than subjects in other conditions. The results indicate that viewing modeled constructive responses to provocation enhances general prosocial responding and inhibits aggressive behavior. (Author/DE)

gramming (Broadcast), \*Social Behavior, Social  
Influences, Social Psychology, Television,  
Television Research, \*Television Viewing,  
\*Violence

Research assessing the impact of consistently  
negative motivations versus mixed negative and  
positive motivations for a televised character's ag-  
gressive behavior and the consequences on chil-  
dren's subsequent behavior is provided. This  
study is also reported in related document SO  
008 573. Second and sixth graders viewed one of  
two edited versions of an aggressive television  
program: (1) one in which scenes relevant to mo-  
tives and consequences were clearly negative, and  
(2) one in which the aggressor sometimes ap-  
peared negative and positive. There were nonag-  
gressive control programs at each age. Random  
subgroups of children responded to an indication  
of willingness to hurt or help a fictitious other  
child, while other random subgroups responded  
to a paper-and-pencil instrument employing both  
aggressive and nonaggressive response alterna-  
tives to hypothetical situations. The results in-  
dicate that children who watched the program  
with mixed character motivations are more ag-  
gressive. Therefore, the effects of aggression on  
television are not only modified by motives and  
consequences in the program, but also depend on  
their uniformity. (Author/DE)

**Identifiers**—Social Indicators, \*STAPOL (Simu-  
lation Game)

A secondary-level simulation designed to  
demonstrate the impact of policy, values, and  
technological and societal developments upon the  
quality of life within a hypothetical state is  
described. See related document ED 064 865 for  
availability of the actual game. By simulating the  
evaluation of policies in terms of social indica-  
tors, STAPOL (State Policy) provides insight into  
the possible future application of such indicators  
in real-world policy planning and analysis. Partic-  
ipants play the roles of state legislator, societal  
evaluator, or exogenous-event assessor. From the  
point of view of these roles, each player is con-  
cerned with the ongoing quality of life including  
environment, health care, education, culture, and  
standard of living. The actual play of the game  
focuses on the attempts of the state legislators to  
increase, through legislative actions, the level of  
quality of life. The index levels of this quality, in  
turn, are set by the combined efforts of the

societal evaluators, who judge the impact of  
legislative actions on various societal groups, and  
the exogenous-event assessors, who determine  
how certain societal and technological events af-  
fect conditions independent of the actions of the  
planners. Learning objectives and suggestions for  
how the game can be used are included.

The results of a 1974 colloquium designed to  
discuss the preliminary feasibility of a United Na-  
tions University are provided. Twenty-five  
representatives from San Francisco Bay area in-  
stitutions of higher learning met to discuss  
general programs and policies, bay area regional  
cooperation and collaboration, communications,  
and educator role. The consensus of all involved  
in the discussion was that the core philosophy of  
the university must be pragmatic rather than  
theoretical, using knowledge to solve global  
problems. One outgrowth of the colloquium was  
to have the Academy of World Studies act as a  
clearinghouse and information center for those  
wishing to promote the development of the  
university. Educators and students would con-  
tribute to the problem solving for this develop-  
ment. Potential faculty positions would be rotat-  
ing in order to use the world's best minds in tack-  
ling the world's worst problems. (Author/DE)

cation, \*Social Studies, Teaching Techniques

This curriculum resource guide is part of an ef-  
fort to provide background information for both  
teachers and students about the composition of  
the American criminal justice system. The docu-  
ment begins with an historical view from other  
cultures and other times. Chapter two briefly  
looks at the American system of justice, including  
handling criminals and juveniles, the purpose of  
the courts, and the role of the correctional  
procedure. The next two chapters present  
selected issues which the criminal justice system  
faces as it attempts to combat crime and  
cooperate with local, state, and national govern-  
ment. These issues are presented for the purpose  
of highlighting the processes and the procedures  
the system uses as it works with minorities,  
women, juveniles, and individual rights. Following  
that is a chapter on the criminal justice system as  
viewed by the police, the courts, and the  
criminal. Within each chapter are organizing  
questions and learning activities which supple-  
ment the readings. Several appendices conclude  
the document, including a selected bibliography

This kit is the first in a series intended to help  
classroom teachers think through possibilities for  
religion study in elementary-level social studies  
and use the instructional materials developed by  
the Religion in Elementary Social Studies Project  
(RESS). The entire RESS project will be availa-  
ble through ERIC and consists of six classroom  
material packages for grades 1-6, four of which  
are multimedia teacher training kits. This first  
booklet contains four major sections which assist  
the teacher of RESS materials and the parents of  
children studying the materials. Consisting of a  
booklet and one audio-cassette (not available  
through ERIC), this first unit of the kit presents  
the Supreme Court's opinion on the Schupp  
and Murray cases for analysis, offers diverse  
definitions of religion so that participants may  
refine their own definition, discusses several  
views of objectivity in light of the Court's usage  
in the context of religion study, and urges partici-  
pants to develop and warrant their views on reli-  
gion study in elementary social studies. Au-  
diovideo tapes supplement the materials and are  
available from the Division of Instructional  
Research and Service, Florida State University,  
Tallahassee, Florida 32306, after August 1976.  
The second part of the document is an evaluation  
report of the materials of Kit 1 by religion  
scholars and educators and by 100 preservice  
teachers in university classes. (Author/JR)

From the Religion in Elementary Social Studies Project (RESS), this first-grade unit is the first of six classroom material packages containing teacher's guides and student learning activities. Designed to infuse religion study into the elementary social studies curriculum, the content of the RESS modules is multidisciplinary. The basic strategy employed is the inquiry method. The first-grade unit consists of three modules which stress religious meaning and commitment, focusing on realizing and reconstructing meaningful space and time and relating experiences of wonder and joy. Each module in the teacher's guide contains the following information: conceptual framework; learning strategies; role of the teacher; learning activities; materials needed; preparation; evaluation; and resources and references. The document also includes student materials and an evaluation report of the first-grade unit. (Author/JR)

From the Religion in Elementary Social Studies Project (RESS), this second-grade unit is the second of six classroom material packages containing teacher's guides and student learning activities. Designed to infuse religion study into the elementary social studies curriculum, the content of the RESS modules is multidisciplinary. The basic strategy employed is the inquiry method. The second-grade unit consists of three modules which focus on areas of inquiry about religious meaning and commitment in a particular cultural setting. Religion is explored as a community experience in a homogeneous society, a society of cultural diversity, and in the child's own community. Each module in the teacher's guide contains the following information: conceptual framework; learning strategies; role of the teacher; learning activities; materials needed; preparation; evaluation; and resources and references. The document also includes student materials and an evaluation report of the second-grade unit. (Author/JR)

**Identifiers**—Mastery Learning

Innovations which were incorporated into large, introductory, educational psychology lecture classes are described and compared to smaller classes that did not make use of the innovations. Four innovative pedagogical techniques are used: (1) a mastery approach, (2) formative evaluation, (3) a modified pyramid-like structure using small group discussion leaders, and (4) supplemental readings. Posttest data from two large lecture classes using these innovations are contrasted with posttest data from the smaller class that did not use them. The results of the posttest and a survey of students' opinions of the innovations indicate that large lecture classes do not have to be a negative educational experience for undergraduate college students. From both a cognitive and affective point of view, students gain more knowledge and prefer the experience of a large class if it is structured in this appropriate manner. Making use of formative evaluation, small group meetings, discussion leaders, supplemental readings, and the mastery approach can efficiently achieve educational goals and enhance the student's experience in a large class structure. The second kit of the Religion in Elementary Social Studies (RESS) project is to be used only after examining and understanding the first kit described in SO 008 696. The second kit is concerned with the organization of instruction concerning religion and teacher performance. Insights from learning theorists are offered which can contribute to effective instruction in using the materials. The kit includes the general objectives of the RESS materials, the scope and sequence of content, a sample organization of a complete unit, and a sample lesson showing what religion might look like in classrooms for young children. The general objectives of the kit help teachers to (1) identify personal conceptions of effective and ineffective teacher behavior; (2) identify varieties of teaching methods and media available for teaching religion; (3) describe the structure and content of the RESS materials; and (4) reflect on the assumptions made in instructional decisions, including the decision to use or not to use the RESS materials, and how these materials are used with students. Each portion of the kit contains sets of questions for teacher self-evaluation. The second part of the document is an evaluation report of the materials. (Author/JR)

**Identifiers**—\*Harvard Project Zero

Harvard Project Zero provides a series of technical research reports which study artistic creation and comprehension as a means toward better art education. The emphasis of the research is to improve art education through a better psychological understanding of symbol systems and media of art and through better understanding of the perceptual, motor, and cognitive processes involved in dealing with art. This third technical report in the series studies whether preadolescent children can learn to classify paintings consistently by style or by figure. Subjects at the seven- and ten-year age level were

given a pretest, a seven-week training session, and a number of post- and transfer tests. Children at both age levels demonstrated the ability to sort paintings according to a consistent criterion. The older group could more readily alter the basis of its classification and their style sensitivity was not found to be dependent on concrete operational thought. Results of transfer tests given to the experimental and control group indicated that practice in looking at pictures may increase sensitivity to the textural aspects of visual display. (Author/DE)

**Identifiers**—\*Harvard Project Zero

This is the fourth in a series of technical research reports by Harvard Project Zero which study artistic creation and comprehension as a means toward better art education. This particular study examines children's sensitivity to musical styles. Twenty children at age levels ranging from 6 through 19 years participated in the study which measured their sensitivity to classical music. The results indicate that all age levels showed some sensitivity, with the three oldest age groups performing at a level which was significantly higher than the two younger age groups. Younger children showed a significant tendency to focus on a dominant figure and had strict criteria for judgments of style similarity. The conceptions of music held by children of different ages are discussed, and comparisons with sensitivity to style in other media are made. (Author/DE)

**Identifiers**—\*Harvard Project Zero

This is the fifth in a series of technical research reports by Harvard Project Zero which study artistic creation and comprehension as a means toward better art education. The three papers in this report all concern the bearing of projective geometry on the perceptual processes by which pictures are "read" for spatial information. The first paper describes the human inclination to interpret pictures as representing rectilinear forms when, from a geometric standpoint, they might represent nonrectilinear forms. The second paper studies how the visual system compensates for pictures seen at an oblique angle, rather than perpendicularly. The third paper examines how

viewers readily and consistently interpret simple line drawings as space forms, even though conventional depth cues such as perspective, occlusion, or "familiarity" may be absent. Throughout these papers, the logical ambiguity of line drawings—their lack of distinct three-dimensional information—is stressed together with the active role of the visual system in making assumptions to resolve this ambiguity. This is the sixth in a series of technical research reports by the Harvard Project Zero which study artistic creation and comprehension as a means toward better art education. (See related documents SO 008 705 to 008 709.) This paper examines the ways in which music can refer in various ways to itself or to extramusical things. It outlines the symbol relations involved in such "program devices" as expression, description, naming, quotation, and representation in order to study whether music expresses like words, pictures, or metaphors of a nonliteral form. Though each type of reference differs from the others, they all involve denotation of or by music. This paper particularly emphasizes the analysis of music denoting in the context of programme music and opera. Primary attention is given to (1) syntactic and semantic features of musical names and description, (2) the status of semifictional compliants of naming motifs in opera, (3) analysis of the expressive and descriptive aspects of programme music, and (4) the mechanisms of musical allusion and quotation. **Identifiers**—\*Harvard Project Zero

This is the seventh in a series of technical research reports by Harvard Project Zero which study artistic creation and comprehension as a means toward better art education. This study summarizes the content and practical procedures of a series of lecture-performances in different arts performed before a target audience. The lecture-performance offers an alternative to the dominant and largely unexamined assumption that the best way to build alert audiences is to produce skilled amateurs. The goal of the series was to expose the artist at work so vividly that the audience would be caught up in the artist's process of exploring and choosing between alter-

native ideas and means of expression. Artists usually demonstrated alternative approaches to the same object, presented and discussed some unfinished works, and included some successful finished works. Descriptions of the dozen presentations conclude the author's case that to become an "audience" is a responsible vocation requiring special preparation. (Author/DE)

**Identifiers**—Oral History

This document is a diagnostic test and workbook for high school and college students who are developing a sense of history using a seven-stage developmental schema. It is part of SO 008 711 and should only be used in conjunction with it to fully understand its components. The objectives and explanation for the workbook will be found in SO 008 711. The schema is used in a performance contract system and includes: (1) articulation of expectations, (2) resource lists on the skills and content to be covered, (3) sample contracts so that students are fully aware of expectations, (4) blank copies of contract forms to help students organize their work, (5) negotiation of the contract on the basis of diagnostic tools, (6) implementation and possible renegotiation of contract, and (7) evaluation. This workbook helps the teacher to know where the students are in their understanding of history. The workbook evaluates 36 performance objectives based on a humanistic approach to teaching history, including such objectives as ability to memorize, knowledge of research methods, ability to use a library, ability to handle a large mass of data, ability to use primary sources, ability to make judgments, and understanding of a philosophy of learning. The format includes a series of questions which may be answered or used for further thinking. (Author/JR)

This document comprises a modular syllabus for a college education course for teaching open education in elementary and secondary schools. The aims of the course are to introduce students to open classrooms, to introduce a developmental approach for the teaching of a sense of history, to offer students a chance to use the techniques in an open classroom style, and to develop a learning group workshop format to contribute to the growing body of literature on open classroom teaching. The course takes a humanistic approach to education and examines the following major topics: (1) the development of a personal sense of history, (2) the developmental approach, (3) the contract system, (4) the modular syllabus, and (5) unified educational philosophy and techniques. Sample diagnostic and performance forms and learning activities are incorporated throughout the document. One other diagnostic test is available as SO 008 710. (Author/JR)

As part of an Office of Education Title IX Ethnic Heritage Studies Grant (1974), this document presents the report on integrating black materials into the high school curriculum. Objectives of the ethnic studies project were to (1) continue the ongoing statewide oral history project, (2) implement a pilot program or demonstration project on the incorporation of existing relevant Afro-American materials into the current instructional program in social studies and humanities, (3) disseminate the instructional materials to participating schools for classroom use and evaluation, (4) provide inservice training for a pilot group of 15 high school teachers, and (5) develop instructional units and media materials dealing with black awareness. The document includes the agenda and guidelines from the teacher workshop for incorporating black literature in the high school curriculum, as well as a selective bibliography of appropriate materials. Following the report are eight instructional units which were developed to incorporate black materials into United States government and American history courses, American literature, speech and choral reading, and poetry and biography courses. The units include philosophy, goals, objectives, outline of course, appropriate materials, and activities. (Author/JR)

Eleven articles comprise this document which presents commentaries on nutrition, population, and environmental education. The articles deal specifically with the crises of a rapidly growing world population, a worsening world food situation, and an energy crisis. A number of specific recommendations, both national and international, are offered to improve the precarious world-food situation. Following an introductory article on these problems, the second article calls for a global effort to help solve the problems through the continued efforts of the United Nations General Assembly's World Food Conference. The third article calls for a buildup of food stocks to give the world a security against serious food shortages through a coordinated system of national reserve stocks of cereals in both developed and developing countries. The following article calls attention to the problems of food in relation to the growing population—problems of both quantity and distribution. Also included is a Declaration on Food and Population presented to the United Nations on April 25, 1974. The problem of the world fertilizer shortage which threatens food supplies is discussed in another article. Other articles deal with food, nutrition, family health, and family responsibilities. Presented in this short bulletin are four articles which provide up-to-date information on general educational trends in the general field of education and science in the Republic of Germany. The first article demonstrates educational reform, emphasizing humanistic education, ranging from preschool to vocational training establishments and adult education in a German state. A new perspective for future educational policy as a result of the European Education Ministers' Conference is reported in the second article. Continuing education for both professional and adult education is examined in the third article. The fourth article contains a description of a Humboldt Foundation conference for natural scientists and educational and scientific research. Short reports following the articles deal with university entrance procedures, correspondence universities, training, and youth. (Author/JR)

 Identifiers—\*United Nations University

The results of a 1975 seminar designed to examine the potential of a United Nations University are summarized. Considering that the university is still in the early stages of policy planning, the seminar was one means of demonstrating that there are people and organizations who support the university. Topics for discussions included: (1) What Is the United Nations University? (2) Can the United Nations University Become a Vehicle of World Education? (3) How Can World Citizens Foster Planetary Consciousness through the University? (4) Curriculum: Global Problems and Priorities, (5) The University as a Communications Center, (6) Research Priorities, and (7) How Can People Become Involved in the United Nations University? In discussing the university's status and future potential, the participants recommended that research should be multidisciplinary; the university should adopt a holistic approach to problem solving of global issues affecting mankind; the university should become a vehicle for the reorientation of education toward preparing students for life in a world community; and in order to effectively meet its objectives, the university should enlist the support of existing research organizations, universities, and nongovernment organizations. Although classroom "openness" has been much discussed in recent years, there has been little effort to investigate to what degree this openness occurs within a general sample of classrooms. The purpose of this study is to identify significant attributes of classroom activity and organization relevant to the concepts of "traditional" and "open" and to see whether these attributes can be used to derive meaningful classroom types. Fifty fourth-grade public school classrooms in Montgomery County, Maryland were observed eight times for specific behavioral categories referring to general organization and activity, teacher behavior, student behavior, and classroom atmosphere. Results indicate that there are three basic classroom types of approximately equal numbers. The first type was characterized as "open" and included elements of student autonomy, individualized student-teacher interaction, emphasis on student creativity and involvement, and a warm, friendly atmosphere. The second, more traditional classroom type was characterized by tight teacher control, little student autonomy, cold and critical atmosphere, and an emphasis on individual work on convergent tasks. The third classroom type was a combination of the open and traditional where teachers stimulated student interest by their own relatively flamboyant classroom performance. (Author/DE)

Descriptors—Case Studies, Conflict Resolution, \*Decision Making, Middle Schools, \*Participant Involvement, Problem Solving, Secondary Education, \*Student Attitudes, \*Student Government, \*Student Participation, Student Role, Teacher Attitudes

The current status of student government's role in the school decision making of a New York junior high school is examined in this case study. The student body, faculty, and administration responded to a 37-item questionnaire which examined their attitudes toward student government activities and importance in school decision making. The results indicate that a majority of the students and faculty felt that students were not involved in the decision-making process even though the principal felt that they were. Students were disenchanted with the performance of the student council, did not feel that the council solicited their opinions, and did not think that the council served as a link between the students and the administration. While activities to increase student input into student council activities were initiated, efforts at increasing student input into the decision-making process met with little response from the administration even though the principal agreed to meet with council representatives every two weeks. **Identifiers—\*Ireland, Thematic Apperception Test**

This paper examines the major conflicts and stresses which surround the coming of age in rural Ireland today and which commonly contribute to mental breakdown. The study is based on ten months of participant observation in an Irish-speaking village of Southwest Kerry, combined with weekly visits to the county mental hospital. The author uses a comparison of selected themes in four cards of the Thematic Apperception Test, which was administered in its entirety to 36 normal village adolescents between 15 and 19 years and to 22 single mental patients of both sexes between the ages of 15 and 35. The author concludes that the cost of inheriting the land and perpetuating the rural culture with its demands of an austere lifestyle leaves the Kerry adolescent and young adult few options. Among these are escape through emigration, stoical acceptance via repression, or periodic maladjustment during which times the delicate balance tips and the normally repressed individual is flooded with uncontrollable angers, resentments, and felt needs for attachment and intimacy with the absent or non-existent "significant others" in his life. This manual is intended to help high school teachers use a laboratory field trip approach to economic education. The information in the manual is based on experiences which were part of the Akron, Ohio, Public School pilot program in economics that combined classroom instruction with in-depth exposure to community resources. Part 1 of the manual outlines some of the ways field trips can become meaningful illustrations of educational concepts, discusses the use of guest speakers, and describes methods for involving students in the classroom learning resource center. Part 2 outlines the Akron pilot program experience and discusses the purpose, procedure, staffing, resources, and evaluation procedures of the project. Also provided are suggestions for classroom and field activities. The Pilot Project Economics Test is included. The Appendix contains sources of free economic materials and a bibliography of economic textbooks and audiovisuals. (Author/RM)

This handbook is intended to help economic educators develop teacher training courses for demonstrating to classroom teachers how to teach economics to children, grades 1-9. Teachers enrolled in the course carry out their own pupil activities which teach economic ideas. These activities include problem solving, case studies, skits, making posters, viewing of films, and role playing. The teachers write a brief description of the concept the activity teaches and the teaching techniques used and share their experience with the activities in group discussion. The handbook material (1) provides a description of the topics to be covered in each session; (2) lists related films, filmstrips, handout materials, and other needed resources; and (3) gives a general description of how to organize each session. The handbook was originally published as a resource for Oregon teachers. This revised edition, however, can easily be used by teachers and educators in other states. (Author/RM)

This report is the second part of a continuing effort to evaluate the economic content and related teaching strategies of new social studies textbook series used in the elementary grades. The following five textbook series are examined: (1) The World of Mankind (Follett); (2) The Ginn Social Science Series; (3) Our Family of Man (Harper and Row); (4) Man and his World (Noble and Noble); and (5) The Sadlier Social Science Program. The study consists of four major parts. The first part identifies the major economic concepts found in the elementary textbooks. Part two focuses on the evaluation of the treatment of economic content in the intermediate grades. The third part analyzes teaching strategies by examining objectives, suggested activities, and evaluation methods. Specific strengths and weaknesses of the new textbook series are described, and suggestions for strengthening the instructional component are provided. The final part contains 11 specific recommendations for publishers. (Author/RM)

These publications are intended for secondary-level business educators who want to include more economics in their general and basic business courses. They can serve as curriculum development documents for those charged with redesigning course offerings. Part 1 of the first publication briefly discusses economic ideas to be developed in general business. Part 2 contains a general course outline of a full-year advanced business course and four sample instructional guides that outline behavioral objectives and suggested class and evaluative activities. The Appendices, which comprise about half of the document, contain ten tests and an economic attitude inventory. The second publication contains 75 class activities on economics which can be integrated into general and advanced business courses. Activities include classroom discussion, role playing, writing reports, guest speakers, and skits. (Author/RM)

**Descriptors—\*Educational Assessment, Educational Objectives, Educational Research, Educational Trends, \*Futures (of Society), National Surveys, Participant Satisfaction, Relevance (Education), Secondary Education, \*Social Change, Social Problems, \*Social Studies, Sociocultural Patterns, \*Student Attitudes**  
In an effort to determine how students themselves perceive social studies and the society, two questionnaires were developed and administered to 797 seniors in 19 high schools across the country. The first questionnaire surveyed student comparison of social studies with other school subjects; assessment of preference for various teaching methods and materials; and evaluation of such course characteristics as realism, analytic emphasis, and objectives. The second questionnaire measured student attitudes toward contemporary and future American society and included questions on family, marriage, and sex roles; physical needs and public services; social class and status; social implications of religion; jobs and education; racial and ethnic relations; and crime and violence. The results indicated a generally positive view of social studies courses in comparison to other courses in the curriculum. Most students preferred discussion to any other form of teaching method and liked lectures the least. In viewing present and future society, all students, except for those of lower socioeconomic

background, anticipated highly significant changes in the future. The students saw job preparation as a major purpose of contemporary education. (Author/DE)

**Bicentennial Social Studies for the Urban Classroom.**

Pub Date Nov 75

Note—22p.; Paper presented at the Annual Meeting of the National Council for the Social Studies (Atlanta, Georgia, November 26-29, 1975)

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

**Descriptors**—City Problems, \*Colonial History (United States), Course Descriptions, \*Local History, Primary Sources, \*School Community Programs, School Community Relationship, Secondary Education, Social History, Social Studies, Teaching Techniques, United States History, Urban Education, Urban Environment, \*Urban Studies

**Identifiers**—\*Bicentennial, Oral History

The paper describes ways in which the urban classroom teacher can celebrate the Bicentennial and investigate the historical role of the cities throughout American history, without sacrificing current and futuristic issues and topics. Primary and secondary sources are used and a community-based field program for students is developed. The following common municipal problems confronting both colonial and contemporary city residents could be the basis for a unit of instruction: fire, sanitation, traffic control, crime, welfare and the poor, public works, and defense. By developing a sense of historical perspective, the urban social studies student should be better prepared to examine the issues and municipal problems of today's cities. Community resources are abundant for the study of these and other local history issues and include community residents; guide books; Bicentennial television programs; novels; newspapers; municipal and county court records; diaries, letters, and autobiographies; maps; town, city, and county histories; travellers' accounts; and field trips. Also included is an extensive bibliography of early American history references and a sample competitive funding proposal for a community-oriented local Bicentennial project. (Author/DE)

**Social Interaction and the Development of a Sense of Right and Wrong in Young Children.**

Pub Date Nov 75

Note—17p.; Paper presented at the Annual Meeting of the National Council for the Social Studies (Atlanta, Georgia, November 26-29, 1975)

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

**Descriptors**—Childhood Attitudes, \*Early Childhood Education, Family Environment, Literature Reviews, \*Moral Development, Moral Values, \*School Environment, Social Development, \*Socialization, Teaching Methods, Television Viewing, \*Values

Brief descriptions of recent research in early childhood moral development and the author's own hypotheses about the relevance of moral development theory on early childhood classrooms and curricula are provided. The three recent research studies focus on young children's development of a capacity for empathy, social perspective, and sense of justice. According to the author, positive reinforcement for thoughtful ways of dealing with conflicts provides a home and classroom environment conducive to learning. Adult verbalization in moral development helps the child bridge the gap between the awareness of his own feelings and his awareness of the feelings of others. When language underscores the child's experiences and when the message is consistent with the social behavior the child sees around him, the language undoubtedly contributes to social learning. A stable, consistent, and accepting environment can help the child learn about fairness even though the teacher makes no overt effort to teach about justice. Finally, since television is often the child's primary view of society, moral education in school must consist of guided discussion of information and misinformation from television viewing. **Identifiers**—NAEP, \*National Assessment of Educational Progress

The purpose of this report is to document the results of the 1971-72 national assessment of the music education of elementary-secondary students and young adults. Music exercises were given to a national probability sample of 9-year olds, 13-year olds, 17-year olds (including high school dropouts and early graduates), and young adults between the ages of 26 and 35. The music exercises administered treat the five themes of musical performance, musical notation and terminology, instrumental and vocal media, music history and literature, and attitudes toward music. Variables used for the data analysis of each of these themes include age, region of the country, sex, race, level of parental education, and size and type of community. This report shows the data analyses using graphs. No conclusions are drawn. Readers are expected to assimilate the data to draw their own conclusions. (Author/RM)

**Identifiers**—Johnson (William), \*New York

In order to make the vast literature about the history of Indian and white relations in New York readily accessible to teachers, students, and general readers, this booklet brings together the main points of the relationship between the Indians and Sir William Johnson. Johnson is a key figure in the Indian story of New York state during the 1770s. The topics covered in this document are Indians of New York, coming of the white men, management of Indian affairs, William Johnson comes to America, the Indian trade, French and Indian War, Battle of Lake George, Sir William Johnson, the close of the war, taking Fort Niagara, Sir William—colonial statesman, culture on the frontier, life at Johnson Hall, failure of Indian management, American independence, Indians and the Revolution, and importance of Sir William Johnson. Both the white man's and the Indian's views on major events are incorporated into the booklet. (Author/ND)

**Descriptors**—\*Annotated Bibliographies, Area Studies, Classroom Materials, \*Curriculum, Elementary Secondary Education, \*Global Approach, \*Instructional Materials, Resource Centers, Resource Materials, Social Studies, World Affairs, World Problems

This bibliography is designed to help teachers find resources and suitable K-12 classroom materials that introduce and incorporate global perspectives into curricula. This collection emphasizes the interrelatedness of world problems and issues, as well as of areas of the world. The bibliography contains the following three sections: resources for teachers, resources for classroom use, and resources produced by selected projects and organizations for teachers and classroom use. Section I on teacher resources contains lists of books and pamphlets, bibliographies of resources for teachers, journal articles, and selected continuing sources for information, materials, and teaching ideas. Section II on classroom materials provides lists of reading materials, multimedia materials, media guides and publishing agencies, simulations, and bibliographies. The third section identifies projects and organizations whose resources and services may be helpful to teachers. Most of the entries in this bibliography include availability information and short annotations. (ND)

The purpose of this publication is to acquaint college students with the basic information needed to successfully access and use the 1970 Census of Population and Housing. Contents present discussions of the following: Can Census Data Help Me?; What Information Does the Census Provide?; For What Areas Are Census Data Reported?; How Are Census Data Released?; How Do I Find a Particular Data Item?; and Reference Sources. Exercises are provided to reinforce the learning of these basics and to involve the reader in the actual use of the census publications. Exercises include Learning Census Geography, Learning Subjects Collected in the 1970 Census, Learning to Read Tables, and Finding the Data and Using It. Addresses and telephone numbers of U.S. Department of Commerce District Offices are included. (Author/RM)

Identifiers—Germany, Great Britain, Sweden

Part of a research project for the investigation and development of techniques for the analysis of curriculum materials, this document explores possible roles and goals for curriculum analysis in Great Britain, Germany, Sweden, and the United States. The methodology of the project includes four main types of activity: (1) reading, consultation, and reflection; (2) producing analyses of different types of curriculum; (3) teaching curriculum analysis to experienced teachers; and (4) conducting one-week workshops for people without any background in curriculum. The focus of the project is on curriculum analysis of materials for either pupil or teacher which have a significant influence on decision making at the curriculum level. Following the introduction of the project and its rationale, the second chapter sets out to define curriculum analysis and its relation to curriculum evaluation, curriculum criticism, preservice teacher education, and inservice education. Chapter three includes a review of published schemes for the analysis of curriculum materials from several countries. The fourth chapter examines the Sussex scheme which was developed from the investigation of the other curriculum analysis systems. The final chapter presents the training process of curriculum analysis. (Author/JR)

Descriptors—Adult Education, Bibliographies, Discussion (Teaching Technique), \*Discussion Programs, \*Educational Resources, Program Development, Resource Guides, Secondary Education, Social Studies, \*Social Studies Units, \*United States History

Identifiers—American Issues Forum, \*Bicentennial

Volume II contains 20 discussion units for the final five months of the Calendar for the American Issues Forum Bicentennial program (see SO 008 613 for Vol. I). Discussion topics in this book include Working in America; the Business of America; America in the World; Growing up in America; and Life, Liberty, and the Pursuit of Happiness. Although a variety of instructional procedures are suggested, all of the units are intended to engage students in structured activities leading them to active inquiry and participation in class discussions. Designed for secondary social studies and history classes, the units provide students with a special, activity-oriented one-day discussion for each of the 36 weekly subtopics of the calendar. Each of the one-day units is a self-contained package which includes suggestions to the teacher for procedures, readings, instructions, and questions. A regional bibliography appends the document, and contains listings of in-print materials. (Author/JR)

Descriptors—Audiovisual Aids, Bibliographies, \*Colonial History (United States), Curriculum Development, Elementary Secondary Education, Family Life, Learning Activities, Resource Guides, \*Social History, \*Social Studies, Social Studies Units, Transportation, \*United States History

Identifiers—\*Bicentennial

This resource guide is intended for use as a general guide for teachers who are designing elementary and secondary Bicentennial social studies units. The unit stresses three main topics in both an historical and contemporary framework: family life, transportation, and social conflict for the periods of 1776, 1876, and 1976. Emphasis is on the social history of America rather than the political history. The unit only presents outlines, suggested activities, and resource lists. It is up to the individual teacher to collect the materials and fully developed social studies units. A list of suggested library resources, audiovisual resources, discussion questions, and activities are provided. The unit outlines the basic concepts followed by corresponding lists of print and nonprint resources. (Author/JR)

Descriptors—\*Anthropology, \*Curriculum Development, \*Educational Problems, Elementary Secondary Education, Resource Materials, \*Selection, \*Social Sciences

Identifiers—\*Anthropology Curriculum Project (ACP)

This paper is a lead-in to a book entitled "Pre-Collegiate Anthropology: Trends and Materials" (SO 008 751) published in 1975 by the Anthropology Curriculum Study Project (ACSP). Topics discussed include the processes and procedures which ACSP used to gather materials for the publication, the sources of the anthropology materials, processes used for screening materials, and the screening procedures. It is noted that precollegiate anthropology curriculum materials are steadily increasing in numbers. However, because most social studies teachers were trained in departments of history, they have difficulty distinguishing sound anthropological materials from other content which only coincidentally contains anthropological issues or concerns. Therefore, an important task for both educators and anthropologists is to establish sound procedures for the evaluation, dissemination, and adoption of K-12 anthropology materials. The book was published to help with this process. (Author/RM)

Identifiers—\*Anthropology Curriculum Project (ACP), High School Geography Project (HSGP)

This book is directed to educators who would like to see anthropology assume a greater role in the elementary and secondary curricula. Chapter One traces the growth in the importance of anthropology as a part of the school curriculum

from the second world war to the present. Chapter Two discusses the reasons for including anthropology in the curriculum and outlines the content and structure of the field. Chapter Three contains short essays treating the nature and direction of current thinking about anthropology in the curriculum. Chapters Four and Five describe a variety of K-12 anthropology curriculum materials including federally funded project materials, textbooks, simulations, games, and supplementary materials. Chapter Six contains teaching tips and resource suggestions to help teachers construct anthropology courses and units. The appendix is a selective, annotated bibliography of resources to help persons teaching anthropology courses and units. (Author/RM)

Identifiers—\*Minnesota (Minneapolis)

The Minneapolis paraprofessional program was developed with funds from Title I of the Elementary and Secondary Act of 1965. Paraprofessionals are now an integral part of the Minneapolis Public Schools. They have contributed much to the education of students and staff and to good school-community relations. The New Careers and Career Opportunities Programs have provided many low-income paraprofessionals with additional educational opportunities. Every effort has been made to provide training for both specific job assignments and to meet the needs of individual paraprofessionals. Opportunities range from basic education to academic courses and are offered at community schools and college campuses. While it is important that a paraprofessional be well trained, it is equally important that the supervising teacher or other staff member be trained in the effective utilization of the paraprofessionals. Orientation is given to first year teachers and teachers who are new to a school that uses paraprofessionals. Paraprofessionals do not make a teacher's job easier. The duties a paraprofessional assumes release the teacher to initiate activities at a higher and broader professional level. As a result, the teacher and paraprofessional team provide a better learning environment. The paraprofessional in education is a means through which schools and communities can work together. (RC)

Descriptors—\*Cross Age Teaching, Elementary Education, Motivation, \*Motivation Techniques, \*Peer Teaching, Teaching, \*Tutorial Programs, \*Tutoring, Tutors

A field test of "Guiding Older Children As Tutors," one of the four motivational-instructional

procedures of Individually Guided Motivation (IGM), was used in two Milwaukee, Wisconsin schools. A total of 34 tutees, 22 tutors, and 24 adults participated in the field test during the 1972-73 school year. The field test objectives sought an increase in the motivation, self-direction, and achievement of the tutees; a demonstration of the tutor's ability to conduct sessions; and a demonstration of the school staff's ability to implement the procedure. In addition, the field test was designed to determine the adequacy of the IGM book and films and the feasibility of the procedure in elementary school classrooms. The results indicated an increase in the general level of motivation and self-direction in the tutees of one school, but not the other. The tutee's motivation and self-direction during tutoring sessions and while working on the tutored subject matter outside the tutoring sessions did not increase but started out and remained at a high level. Achievement of tutees did increase more than that of comparison groups when only tutored skills or items were considered. The tutors demonstrated their ability to conduct sessions, and the school staffs demonstrated their ability to implement the procedure. The IGM books and films proved sufficient to support tutoring implementation. The tutoring procedure itself was determined to be a feasible curriculum component for an elementary school if modified in terms of its demands on staff time. (Author)

This report summarizes programs, studies, and symposia conducted by the Council for Cultural Cooperation (CCC) to enhance communication and interaction on educational and cultural matters between the members of the Council of Europe. The first section describes activities undertaken to promote European interaction. These include (1) exchange agreements for teachers and students, (2) improved multi-media language programs, and (3) activities concerning equivalence of qualifications and mobility of students and college faculty. In the second section, "Co-operating in Remodeling Educational Systems," a long-range goal goal is defined as education extending over a lifetime. Activities at all levels of education are discussed, including pre-school, vocational, and adult education. This section also examines the coordination and cooperation in the production, development, and use of multi-media materials. The European Documentation and Information System for Education (EUDISED) is described in this section as an important means of facilitating idea sharing. The Committee for Educational Research is also discussed as an important part of the CCC's program in the area of research cooperation. The next four sections deal with cultural development. Art exhibitions, the management of cultural affairs and cultural promotion, sports, and youth centers are discussed. Appendixes are attached which list budgets, and publications and other materials published by or in conjunction with the Council. (CD)

Turney, Mildred And Others  
Competency-Based Education—What Is It?  
Pub Date Nov 74

Note—15p.; Report to the Vice Chancellor by a Task Force appointed by the Faculty Senate, University of Wisconsin-Stout (Menomonie, Wisconsin, November 1974)

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

Descriptors—\*Behavioral Objectives, Educational Problems, Evaluation, Feedback, Individualized Instruction, \*Performance Based Education, \*Performance Criteria

This task force report defines competency-based education (CBE) as a system of education designed to develop competencies in those who are products of the system. A distinction is made between CBE and performance based education (PBE) in this report. Although the American Association of Colleges for Teacher Education Committee on Performance-Based Teacher Education considers the terms interchangeable, this task force considers the term competency to be the better choice for the name of the system. The report also presents an operational definition characterizing CBE, and states that CBE programs include (1) individualized instruction, (2) learning experiences guided by feedback, (3) the characteristics of a system, (4) careful definition of performance goals in assessable terms and guidance of instruction by evaluation of learner performance, and (5) a focus on the student in the teaching-learning process and product. Six functions of competency are also identified and discussed. These include binary, communication, suggestive, investigative, and generative functions. The paper then sets forth what appear to be the 11 chief issues presently confronting the CBE movement. The last section of the report presents 10 problems relating to competency-based education. (BD)

Alvir, Howard P.  
Self-Assessment Criteria for Workshop Directors Planning, Conducting, or Evaluating Teacher In-Service Workshops for Staff Development.

Pub Date Dec 75

Note—14p.

Available from—Howard P. Alviri, 27 Norwood Street, Albany, New York 12203 (on loan)

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

Descriptors—\*Evaluation Methods, Inservice Teacher Education, \*Post Testing, \*Self Evaluation, Staff Improvement, Teacher Workshops, \*Workshops

This workbook presents three evaluation exercises that can be used by workshop directors to plan, implement, and evaluate workshops. The first exercise is deemed most helpful when the workshop objectives are only half-formed. Exercise 2, for cases in which workshop participants have been identified, helps the workshop director ensure that the objectives and needs analysis are relevant. Exercise 3 is designed to help pinpoint learner benefits—where learner refers to students taught by teachers participating at the workshop—after the workshop has been completed. Self-assessment criteria are presented after the exercises with which the reader may measure the effectiveness of his/her answers. (RC)

The Development of a Self-Instructional System for Teaching Basic Educational Media Competencies to Elementary Education Students at Trenton State College.

Pub Date 18 Aug 75

Note—36p.; A practicum presented in partial fulfillment of the requirements for the degree of Doctor of Education (Nova University, August 18, 1975)

**EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage**

Descriptors—\*Autoinstructional Aids, Behavioral Objectives, \*Course Descriptions, \*Instructional Media, \*Performance Based Teacher Education, Performance Criteria, Teacher Education

Experts in the fields of educational media and competency-based teacher education at Trenton State College were consulted in an effort to gain their support and employ their knowledge and experience in the development of this self-instructional system. In addition to these consultations, the objectives of the educational media course that would be developed through the self-instructional system were analyzed in an effort to outline the competencies and to facilitate instructional implementation of the system. As a result of both the consultations and the analysis of the course objectives, plans were made to begin development of the self-instructional system in September 1975. A target date of February 1976 was set for commencing instructional operation of the system. The self-instructional system will consist of 16 wet study carrel stations which will be equipped with the devices and materials necessary for developing the competencies. The system will employ 3/4" color video cassettes for

presenting each competency through a single concept approach that follows the outline of each competency module. (The competency module outline is included in this report.) (Author)

Descriptors—College Programs, Federal Programs, \*Models, \*Performance Based Education, \*Performance Based Teacher Education, \*Program Descriptions, \*Projects, State Programs, Teacher Certification

This document contains program descriptions, definitions, recommendations, and other information on competency based education (CBE). It begins with an overview of the CBE Program of the Division of Educational Systems Development, U.S. Office of Education. Following this are descriptions of the National Committee on Performance-Based Teacher Education, the Multi-States Consortium on Performance-Based Teacher Education, the CBE Center Consortium, and the Interstate Certification Project. Four state CBE models and nine university CBE centers are described. A definition of CBE is presented along with a list of potential benefits of the competency-based approach, and a discussion of related educational concepts. A list of activities in competency based education is then presented, followed by a section containing questions and answers concerning CBE. Finally, a short bibliography and recommendations for federal program initiatives in CBE are presented. (RC)

State Control of Curriculum.

Pub Date 75

Note—20p.

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

Descriptors—\*Curriculum, \*Curriculum Development, \*Curriculum Planning, \*Government Role, State Action, \*State Departments of Education, Surveys

The research in this paper was designed to assess the role of the individual state in directing and supervising curriculum matters within the state. Fifty surveys were mailed to the State Education Departments in each of the 50 states. Questions 1-5 of the survey were designed to determine the number of districts in each state, the number of students in each district, the amount of money spent on education at the state level, and the percentage of funds being directed toward education. These factors were included in order to see if they related to the type and magnitude of state control. The rest of the survey dealt with the specific type of state control exhibited by each state. It also asked the state to make an estimate of the amount of control it has over (1) subject matter, (2) implementation or methods, and (3) evaluation of existing curriculum. Of the 50 surveys distributed, 36 were returned. The results indicated that states have minimal control over local school districts. Regional differences were evident, with southern states exhibiting greater control than other regions. The results were interpreted to suggest that states should increase their involvement in curriculum revision. (RC)

The Application of a Model for Investigating Classroom Processes.

Pittsburgh Univ., Pa. Learning Research and Development Center.

Spons Agency—National Inst. of Education (DHEW), Washington, D.C.

Pub Date 75

Note—42p.

**EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage**

Descriptors—\*Academic Achievement, \*Classroom Research, \*Learning Processes, \*Models, Research Criteria, Research Design, \*Research Methodology

This paper describes a model of classroom processes that can be used in research on the nature of the relationship between school practices and student achievement. It is stated that the model specifies that criterion performance is a

function of initial abilities and of the following four constructs: (1) opportunity, (2) motivators, (3) structure, and (4) instructional events. The paper describes each construct as it pertains to the classroom and deals with evaluating the model and testing the assumptions. The model is applied to the Ashton-Warner approach, the Montessori system, and the individualized programs developed by the Learning Research and Development Center. The paper then describes the variables that make up each of the four constructs and two additional constructs (initial performance, and outcomes). Lastly, the paper deals with the construction of measures of the previously identified variables. The problems involved in moving from variables to measures are discussed, methods that have been found to be useful in describing classroom processes are summarized, and an example of a classroom data-collection instrument is described. This report presents an evaluation study of Project League which is currently implementing Individually Guided Education (IGE) through the auspices of the Merrimack Education Center in Chelmsford, Massachusetts. The purpose of the evaluation was to determine the degree of IGE goal-oriented impact that Project League has had on participating elementary schools relative to (1) IGE outcome achievement, (2) IGE role perception congruency, (3) Project League activity orientation, and (4) identification of successful practices in participating schools. The first two sections of the report discuss both the outcome achievement questionnaire and the role clarification questionnaire. These sections contain descriptions of the instruments; information concerning administration, scoring, and the population; and analyses of the data. The following section contains the computer analyses. Student interview results are discussed in the next section which consists of representative replies given to specific questions by the interviewees. A discussion of the on-site observations of League schools is the topic of the following section. The last three sections include preliminary and final recommendations, as well as a list of the successful education practices of the League schools. Six appendixes containing the proposal, questionnaires, the interview schedule, and the successful practices by schools complete this report. (RC)

Descriptors—\*Communicable Diseases, Health, Health Education, \*Sex Education, \*Teenagers, \*Venereal Diseases

This booklet discusses the venereal disease (VD) epidemic among teenagers. After presenting some basic facts about VD, the effect, treatment, and prevention of both gonorrhea and syphilis is discussed. The booklet then examines statistics concerning gonorrhea and syphilis. It also looks at why the VD epidemic exists and includes discussions on (1) increased sexual activity among the young; (2) negative attitudes towards VD generated by parents, doctors, and public clinics; (3) inadequate knowledge of VD by the public as well as doctors; (4) lack of funding for VD control; (5) an increase in VD due to the war in Viet Nam and other Far Eastern wars; (6) the role of the pill, which has resulted in relaxed attitudes toward sexual activity and a decrease in the use of the condom; and (7) the increase of

VD among homosexuals. The booklet also discusses what can be done to half this epidemic and presents information on research, present methods of control, and the detection of gonorrhea and syphilis. An example of a local campaign in Denver, Colorado to control VD is also presented. Lastly, the booklet explains what to do if exposed to venereal disease and gives several addresses and telephone numbers of health organizations and counseling facilities. Concluding remarks offer recommendations for action to help stop the VD epidemic. An annotated bibliography of books and films on VD is also included. (BD)

Identifiers—\*Minicourses

This report gives an account of the Swedish part of an international transfer project with the aim of adapting teacher training systems based on microteaching for use in member countries of the Organization for Economic Cooperation and Development. An American minicourse, "Effective Questioning," was adapted to and tested for Swedish teacher training. The course represented a method for skill training that aims at stimulating student participation, making students verbally active, having them use higher cognitive processes, and reducing the amount of teacher talk in favor of student participation. The testing of the minicourse took place during the autumn term in 1973 with 32 student teachers on their practice term. A control group of 10 student teachers was included. The hypotheses set forth to test the minicourse were: (1) that the minicourse skills would be used to a greater extent after the course, (2) that there would be no difference on the whole between pre- and post-recordings in the control group, and (3) that there would be no difference on the whole between student teachers at junior and middle levels in mastering the minicourse. Hypotheses two and three were confirmed. As for hypothesis one, there was an obvious change in more than half of the minicourse skills, while the rest of the skills in most cases showed tendencies in the expected direction. (Author/RC)

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

Descriptors—\*Management, \*Organization, \*Organizational Change, \*Organizational Development, \*Organizational Effectiveness, Organizational Theories

The intent of this document is to provide a frame of reference to help a person in any organization assess where the organization is; what might be happening next to the organization; and in what ways he/she can influence the organization in an effective, useful, timely, and functional manner. The structure of most organizations is the result of a decision by somebody at a given point in time which arranges people, roles, responsibilities, and resources in a certain way to get some things done. The stages of organizational growth are: (1) formal/informal, (2) demonstration/developmental, (3) installation/maintenance, and (4) personnel/program. The evaluation of where the organization perceives itself to be and in which direction the organization will move forms the basis for judging which appropriate action will influence the actual activity of the organization about its mission, its style, and its social usefulness. (Graphs are included which depict the various organizational stages.) (RC)

Descriptors—Career Education, \*Career Ladders, \*Career Opportunities, Career Planning, Education, Low Income Groups, \*Manpower Development, \*Occupational Mobility, Promotion (Occupational), \*Staff Utilization, Teaching

The first part of this report discusses the career lattice concept in the Career Opportunities Program (COP), a concept which represents the marriage of two career development ideas—upward mobility and task differentiation at separate levels. It explains that by combining task differentiation and upward mobility, a system can effectively reduce a conglomerate function like teaching into several job categories, each connected to the other in the upward mobility sense and designed to be more efficient in the service delivery. The first part goes on to explain that tasks are distributed at each level on the lattice so that they foster the acquisition of needed skills to move to the new higher step on the ladder. According to the report, this concept allows an unemployed person entering the system as a teacher aide to become a supervising teacher; it also allows for many new and different workers to be trained in new ways. The report affirms that the ladder/lattice design effectively deals with the use of personnel and career mobility, and has enabled COP to take a major step in proving the viability of utilizing the skills of residents of low-income communities in delivering educational services. The second part of the report presents and explains examples of career lattice concepts in operation, and includes career lattice designs, sample job descriptions, articulation between work and training, and evaluation designs. Descriptors—\*Annotated Bibliographies, \*Bibliographic Citations, Cross Age Teaching, Information Retrieval, Peer Teaching, \*Tutorial Programs, \*Tutoring

This annotated bibliography is an effort to provide educators and researchers with a comprehensive listing of current resources, information, and research concerning peer and cross age academic tutoring by students, together with a selection of references on related topics of cross age interactions, tutoring in general, and the use of paraprofessionals in educational and therapeutic situations. The references cited were selected from a search of educational and psychological literature from 1960 to 1973 and are categorized according to the nature of the activities discussed and the nature of the individuals involved. Included are descriptions of both informal tutoring programs in individual classrooms around the country and organized, systematic programs developed and formally evaluated by educators. The bibliography contains a number of controlled experiments and doctoral theses investigating the effectiveness of tutoring by children and adults and the significance of factors such as race, age, and sex differences in tutoring combinations. Also listed are several tutoring "packages" published commercially and available for purchase by school systems. A number of items

cited in this bibliography are unpublished materials listed in the Educational Resources Information Center (ERIC). The ERIC file numbers for these documents are included in the citations. Also cited are doctoral dissertations which are available through University Microfilms along with their listings in "Dissertation Abstracts International." (Author/BD)

Descriptors—Administrative Organization, Government Role, \*Individualized Curriculum, \*Individualized Instruction, \*Individualized Programs, Leadership Training, Program Evaluation, State Programs

Identifiers—IGE, \*Individually Guided Education

Chapter 1 of this status report on the implementation of individually guided education (IGE) states that this report is intended to serve the following two purposes: (1) to complete all the reported requirements relative to implementation funding provided by the U.S. Office of Education and the National Institute of Education and (2) to summarize the strategies, efforts, and results of implementing IGE nationally since 1971. Chapter 2 briefly describes the rationale for the development of IGE, the major components of IGE, and important events in its development and early implementation efforts. Chapter 3 focuses on the objective for the implementation program at the Wisconsin Research and Development Center for Cognitive Learning, a description of a model for implementation, a description of the IGE support system, and the theoretical foundations and validation of IGE implementation strategies. Chapter 4 describes the history of the relationship of the Wisconsin Research and Development Center to states and the development of state IGE networks. It also includes a descriptive status report of the Research and Development Center as of September 30, 1974 and a discussion of further directions. Chapter 5 presents a history of leadership development activities and an evaluation of the leadership workshops. The report also includes numerous tables, figures, and appendices relating to IGE and the implementation of IGE programs, as well as a list of references. (BD)

Descriptors—\*Educational Research, Elementary Education, Higher Education, \*Mathematics Instruction, Negro Colleges, \*Negro Education, Negro Students, Nonstandard Dialects, \*Reading Instruction, \*Science Instruction, Teacher Education

The first report in this research monograph, "Black English as an Instructional Tool for Teaching Arithmetic," states that black elementary school students in a suburban school improved in ability to do math problems after a 6-week program in which Black English and easier-to-read words were used in the problems. At the same time, a control group of white students regressed in math skills when taught from the conventional textbook. "The effects of a University-based Tutoring Program on Reading Skills of Elementary pupils" is the title of the second report which describes the success of elementary education majors from Florida A & M College in improving reading performance of black elemen-

tary school children they tutored for two months. This was seen as a solution to the manpower shortage in the schools and a way to give potential teachers useful experiences. The third report, "A Study of the Effect of the Thirteen-College Curriculum Program Physical Science Course on the Scientific Attitude of College Students," reports that this particular course stimulated more emotional, intellectual, and total favorable attitudes toward science in college freshmen than a traditional science program. Males and females were equally responsive to the more innovative course. The last report, "Teacher Education: A Status Report," surveys black teacher education colleges and compares them to white colleges in terms of characteristics such as curricula, educational concepts, field experiences offered, use of behavioral objectives and individualized instruction, and accreditation. **Innovation in Teacher Education: A Report to the Connecticut Commission for Higher Education Appraising Eight Pilot Projects Sponsored by Public Act 761.**

Connecticut Commission for Higher Education, Hartford.

Pub Date Feb 69

Note—24p.

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

Descriptors—\*Educational Assessment, \*Educational Legislation, Educational Policy, \*Program Evaluation, \*State Legislation, Teacher Education

Identifiers—\*Connecticut

This report contains three sections, the first of which is an introduction. This section states that the purpose of this report was to assess the initial group of projects sponsored under Public Act 761 of the General Assembly of Connecticut, and to weigh the broader implications of the rationale underlying the Act. It is explained in this section that the Act applies to both prospective and probationary teachers, and places emphasis upon the clinical experience, the proposed collaboration between training colleges and school systems, and the target area of the disadvantaged. It also states that the bill calls for continuous and cooperative supervision of student teachers, workshops for those who are to assume supervisory duties, and reduced loads for supervisors. Section two of this report presents a series of nine themes or generalizations that represent the major highlights of the program to date. Each theme is discussed and criticisms are given. Section three contains the evaluators' recommendations. They present 10 recommendations that they hope will further and strengthen the legislation. (RC)

**Our Teachers are Crying: A Positive Approach to Solving Classroom Problems.**

Pub Date Sep 75

Note—122p.

Available from—MSS Information Corporation, 655 Madison Avenue, New York, New York 10021 (\$3.75)

**Document Not Available from EDRS**

Descriptors—\*Class Management, Classroom Communication, \*Classroom Guidance Programs, Classroom Techniques, \*Group Counseling, \*Group Guidance, \*Inservice Teacher Education, Student Teacher Relationship, Teachers

This book presents a positive approach to solving classroom problems. It contains eight chapters, the first of which describes some of the problems faced by teachers and offers a solution in the form of group consultation—a situation in which teachers can share their problems. Chapter 2 discusses the consultation group method. It describes the role of the leader, presents exercises to facilitate behavior change, and contains a plan and guidelines for consultation group sessions. There is also a discussion of the similarities and differences between consultation groups and therapy groups. The subject of chapter 3 is the group leader. This chapter describes the leader's functions and role. Chapter 4 discusses prevalent problems which confront the group leader and offers suggestions on how to handle them. Chapter 5 contains sample dialogues of group sessions and a discussion of the phases the group goes through. In chapter 6, the reader is shown how

the group sessions can be used to solve classroom problems. Chapter 7 contains a questionnaire and sample responses that evaluate the consultation group experience. The final chapter tells what is needed to improve the teacher training curriculum in teacher education institutions, and what the public school systems must do to meet the teacher's needs. It also describes what some universities and public school systems are currently doing to meet these needs. (RC)

**Document Not Available from EDRS**

Descriptors—\*Audiovisual Aids, \*Audiovisual Instruction, Course Descriptions, \*Education Courses, Inservice Teacher Education, Short Courses, \*Teacher Education

Identifiers—\*Minicourses

This kit explains the use of minicourses at Macquarie University in New South Wales, Australia, which were designed for the inservice training of teachers. The kit contains the script of the audio commentary, a cassette tape, color slides, and a booklet entitled "Anatomy of the Minicourse." The tape briefly describes the minicourses in general and then discusses a minicourse on using overhead projectors as an example of a typical minicourse. The booklet outlines the characteristics of a minicourse, presents the general and specific objectives of various minicourses at Macquarie University, and discusses the minicourse on overhead projectors as an example of the minicourses at the university. **The Mini-Course as a Model for the Continuing Education of Teachers. C.A.T. Education Monograph No. 13.**  
 Macquarie Univ., North Ryde (Australia). Centre for Advancement of Teaching.  
 Pub Date Jul 75  
 Note—32p.; Paper presented at the Conference of the South Pacific Association for Teacher Education (Macquarie University, July 10-14, 1975); For related document, see SP 009 624  
**EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage**  
 Descriptors—Course Descriptions, \*Education Courses, Higher Education, \*Inservice Teacher Education, \*Program Development, \*Program Evaluation, \*Short Courses, Teacher Education  
 Identifiers—\*Minicourses

The purpose of this monograph is to discuss the minicourse as a model for the continuing education of teachers. The first section defines the minicourse and describes its evolution. The second section discusses the characteristics of the minicourses at the Centre for Advancement of Teaching (CAT) at Macquarie University, New South Wales, Australia. These characteristics include: (1) meeting a need, (2) specific objectives, (3) self contained, (4) short duration, (5) skills orientation, (6) wide participation, (7) varied learning activities and diverse ways of introducing ideas, (8) emphasis on creative activity, (9) evaluation, and (10) follow-up. In the next section a listing of the current CAT minicourses is presented. The following section describes the steps in the development of a minicourse. It states that a minicourse is essentially a self-contained minicurriculum, and therefore the steps in production are essentially a miniaturized version of the classical steps of curriculum development. The final section details the problems of evaluating the effectiveness of a minicourse, and presents a model to use in the evaluation. A list of references completes this document. (RC)

**The Need for Conceptualization in Program Development.**

Pub Date Jun 74  
 Note—7p.; Paper presented at the annual meeting of the National Teacher Corps (Washington, D.C., June 1974)

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**  
 Descriptors—\*Concept Formation, Educational Specifications, Performance Criteria, Performance Specifications, \*Program Design, \*Program Development, \*Program Planning  
 Identifiers—\*Teacher Corps

There is a need for conceptualization in the development of a Teacher Corps program and the instructional system which is part of that program. Program conceptualization should be viewed as an important process which permeates program design efforts. Conceptualization of program purposes and objectives provides a base for the design, development, and operation of program activities, evaluation, and management. The greater the specificity and explicitness of that conceptualization, the greater the likelihood of program success. Instructional system conceptualization involves the specification of competencies and the specification of instructional characteristics. The specification of competencies should be built on conceptualized role description; that is, specified in terms of the roles persons assume during the operation of the program, and/or in terms of those roles persons are expected to play upon the completion of the program. The specification of the instructional system's operational characteristics in advance of program operation is crucial, for it is this process which sets the "rules of the game". They should be detailed prior to the initiation of training activities. Conceptualization of the program and of the instructional system is a prerequisite to maximizing program effectiveness. (RC)

 Descriptors—Case Studies, \*Evaluation Criteria, \*Evaluation Methods, Measurement Instruments, \*Performance Based Teacher Education, \*Performance Criteria, Teacher Education, Teaching Programs

This monograph contains a set of criteria to be used in helping program planners and administrators define competency based teacher education (CBTE) in the contexts of their situations. The criteria are the result of the collective work of individuals at 12 institutions of teacher education, and have been used: (1) by individuals in operational CBTE programs to help determine the extent to which their program is competency based; (2) by individuals about to embark on a program to develop a CBTE program to suggest "tasks to be completed" in their developmental process;

and (3) in a modified form, to ascertain common elements of CBTE programs existing in a state system of higher education. This monograph is divided into three parts. The first part contains both a short and an amplified version of the instrument. The second part contains an item by item discussion of the criteria contained in the instrument; for each criterion this section includes a criterion statement; indicators for that criterion; and a discussion of the criterion, the indicators, and the author's rationale. The last part contains descriptions of how institutions have used the instrument and includes case study reports. (BD)

 Descriptors—Advanced Programs, College Programs, Educational Alternatives, \*Graduate Study, Higher Education, \*Individualized Programs, \*Performance Based Teacher Education, \*Program Descriptions  
 Identifiers—ModMAP, \*Modular Multiple Alternatives Program

The Modular Multiple Alternatives Program (ModMAP) is the first competency-based individualized graduate program in teacher education in Connecticut. The program focuses on the training of elementary teachers and includes both Master's and Sixth Year level options. This program deals with creating more flexible and relevant types of teacher education through the implementation of an open-education approach to the professional growth of teachers. The ModMAP graduate program is: (1) based on the Multiple Alternatives Program which was developed and tested over a two-year period, (2) diagnostic, (3) prescriptive, (4) individualized, (5) performance-based, (6) school and community oriented, (7) computer managed, (8) modularized, and (9) clinical. The curriculum for both the Master's Degree Program and the Sixth Year Professional Diploma consist of 33 and 21 semester hours, respectively, in Analysis, Assessment, and Planning Core; Clinical Experience Modules; and Instructional and Self-Directed Study Modules. (The document includes a ModMAP Process Model which illustrates the admission, assessment, instructional, and evaluation elements of the ModMAP Program.) (BD)

This book is the annual report of the Foundation for Educational Research (Stichting Voor Onderzoek Van Het Onderwijs-SVO) of the Netherlands. Chapter I is an introduction which explains SVO's part in educational research,

while chapter 2 discusses the general affairs of the SVO. In chapter 3 SVO activities are described. They include (1) project management, (2) supplementary financing, (3) programming of research and development activities, (4) experimental dissemination of project results, (5) research in connection with experiments, (6) documentation and information, (7) requests for advice, and (8) international affairs. Chapter 4 describes the financial administration of the projects, while chapter 5 reviews projects subsidized in 1974. Chapter 6 is an analysis of some of the projects. A report of current projects is contained in chapter 7 and chapter 8 is a survey of the final reports submitted in 1974. Chapter 9 contains data on various SVO boards, committees, and groups. The final chapter is a list of SVO publications. (RC)

 Descriptors—\*Administrator Attitudes, Non-professional Personnel, \*Paraprofessional School Personnel, \*School Aides, School Districts, \*Surveys, Teacher Aides, \*Teacher Attitudes, Teaching Assistants

This study was designed to gather current data relating to paraprofessionals in California who have direct involvement with instructional programs. This information was gathered from school districts, principals, and teachers. The data included the following general subject areas: (1) number of school districts using paraprofessionals and school district policies relating to them; (2) important reasons for the introduction of paraprofessionals into the school instructional program, (3) number of paraprofessionals in relation to full time staff members; (4) classroom activities which involve paraprofessionals; (5) effect of paraprofessionals on class size and learning; (6) level of acceptance by professional staff; (7) recent and future trends in use of paraprofessionals; (8) paraprofessional salaries; (9) paraprofessional organizational affiliations; and (10) advantages and problems as a result of the use of paraprofessionals in the classroom. From the data obtained in this study, it was concluded that almost 100 percent of all districts are currently using paraprofessionals, and that there has been a steady increase in the numbers of paraprofessionals used over the past several years. Teachers, principals, and district administrators surveyed expressed a desire for increased use of paraprofessionals in the future, and the majority of teachers believed paraprofessionals have a positive effect on student learning. The need for in-service training of paraprofessionals was also expressed by participants in the study. (BD)

 Identifiers—\*Teacher Corps

The first page of this list of requirements for elementary science teachers lists overall course objectives for a Teacher Corps science education course. Next are instructions for learning to use the Science Teacher Observation Rating Form, followed by an analysis of each item on the form, instructions for scoring it, and a copy of the form itself. The next part contains objectives for the student to complete in order to become familiar with three new science programs. This part also contains the forms to complete in order to examine each program. The final part concerns teaching techniques. It lists requirements that

must be met and contains several forms for the student to complete. (RC)

 Identifiers—\*Learning Modules

This learning module is designed to enable teachers to help children further develop their concepts of the meaning of numbers in our number system (including concepts of quantity, one-to-one correspondence, number order, before-after, greater than-equal to-less than, number patterns, and the structure of our number system). The module contains a rationale, general objectives, specific objectives, and a list of materials and equipment. There is also a list of general instructions for the teacher or student teacher. The procedures for using the module include a pre-test, a video tape, reading, studying games, several optional activities, and a post-test. A copy of the pre-test and its answer sheet, along with a copy of the post-test and answer sheet, are included. The module also contains games with tri-dominos. A list of suggested readings and a bibliography complete the module. (RC)

**Commercial Involvement in Intramurals.**  
 Pub Date 1 Nov 75

Note—7p.; Presentation submitted at the N.I.S.C. sponsored Central Regional Intramural Conference (1st, Minneapolis, Minnesota, November 1, 1975)

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**  
 Descriptors—Athletics, \*Business, \*Intramural Athletic Programs, \*News Reporting, \*Publicize, Public Relations

Sport in general has long had ties with commercial interests, the most popular and widespread involving publicity. Intramural sports programs, however, have not cultivated many commercial involvements in publicity. The approach in intramural sports advertising is simple. A commercial interest pays for space or time in a given communication media (usually printed—newspaper, newsletter, etc.). The business name appears only in the title of the publicity efforts, such as the "McDonald's Intramural Page." The rest of the space is filled with intramural information, pictures, and stories. At the University of Minnesota, Hamms Beer advertised weekly in the student newspaper by sponsoring an intramural page. At Iowa State, participation in intramurals was good, but the student newspaper ran little news about them. McDonald's was convinced to pay for a weekly page covering intramural sports. The publicity was good for the intramural program as well as for McDonald's and convinced the newspaper staff to add intramural news to its regular sports page. The way to sell this concept of advertising is to stress that it is an innovative method along with being soft-sell and that there is solid readership interest in the advertisement from intramural participants. Other possibilities for commercial involvements in intramurals include intramural graduate assistantships or scholarships, scoreboards/time clocks, awards, and intramural rule books or handbooks. **Competencies for Secondary Health Occupations Teachers.**  
 Pub Date 75  
 Note—16p.

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**  
 Descriptors—Class Management, \*Critical Incidents Method, \*Health Occupations Education, Health Personnel, \*Performance Based Teacher Education, Performance Criteria, \*Teacher Behavior, Teacher Educators, Teaching Methods, \*Teaching Skills, Vocational Education

Studies have not made clear what specific teacher competencies are important for teachers of health occupations in secondary schools or vocational centers. This study, therefore, used Flanagan's Critical Incident Technique to collect reports of observed teacher behaviors which students perceived as being especially effective or ineffective for teacher performance. The kinds of behaviors students commented on were (1) instructional methods, (2) classroom management, (3) personal and career guidance, (4) student evaluation, and (5) coordination of plans with the health facility to obtain field experience for students. Overall results showed that students were most concerned with and favorable to teachers' methods of instruction and most disturbed by improper classroom management. This information, obtained from direct classroom experience, should guide educators trying to teach health personnel to become as skilled at teaching as they are in their health area. (CD)

**Revenue Sharing - Up to Minute Information.**  
 Pub Date 22 Oct 75

Note—18p.; Remarks delivered to the National Recreation and Part Association (Dallas, Texas, October 22, 1975)

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**  
 Descriptors—Federal Aid, Federal Legislation, \*Federal State Relationship, \*Grants, \*Local Government, Recreation, Recreational Programs, \*Recreation Finances, \*Revenue Sharing, State Government

Title I of Public Law 92-512, the State and Local Fiscal Assistance Act of 1972, is popularly known as the Revenue Sharing Act. It provides for payments of approximately \$30.2 billion to over 38,000 general units of governments, the 50 states, the District of Columbia, and approximately 350 Indian tribes and Alaskan native villages. Revenue sharing funds may be spent with a minimum of Federal regulation and restriction—states may spend their entitlements in any expenditure category they wish. A number of recreational and cultural activities are eligible for support. States and local governments spent approximately 4 percent of their budget on recreation programs from 1972 through 1974. There are many advantages to revenue sharing, such as (1) it is predictable, since funds are authorized for 5 years; (2) there are few bureaucratic problems; (3) it is simple to apply for funds; (4) no arbitrary decisions are made on merits of programs; (5) it disperses aid universally; and (6) it is administratively inexpensive. Categorical grants by the federal government, on the other hand, force local funds to match categories of the grants even when local priorities are different, operate against small communities which don't have or can't afford "grantsmanship", and make reporting difficult. Revenue sharing has been studied and positively reviewed by everyone from Congress to individual scholars and consumer groups. The President recommended that the program be extended until 1982, with minor modifications, and it is hoped that Congress will concur. (CD)

 Descriptors—\*American Indian Culture, \*American Indians, \*Athletics, \*Games, Historical Reviews, \*Tribes

Identifiers—\*Ceremonies  
 This is a report on the relationship of North American Indian athletic games to ceremonies. Data for this investigation were researched from 48 "Annual Reports of the Bureau of American Ethnology, Smithsonian Institution" published from 1881 to 1933, and the 84 volumes of the "American Anthropologist" published from 1888 to 1974. Observational reports from American ethnologists and anthropologists were also included. Forty-six examples of North American Indian athletic game-ceremonial relationships were collected. Thirty-one tribes were represented in the data. The results indicated that ceremonial rites, both need-related and game-success-oriented, formed a major category of the athletic game/ceremony relationship. Ceremonial rituals

also formed a major category of the relationship. It was shown that the ceremonial accompaniment aspect was a minor category of the athletic game and ceremony relationship; when the ceremonies were over, the games, as entertainment, began. Based upon the accounts from which the data were drawn, it is shown that North American Indian athletic games were not without ceremonial relationships. Tribal culture was integrated into native North America ceremonial athletic games in a number of ways. (RC)

**Descriptors—**\*American Indian Culture, \*American Indians, \*Athletics, \*Games, Historical Reviews, \*Tribes

**Identifiers—**\*Gambling

This is a report on the motives of North American Indians in holding their athletic games. Data were researched from "Annual Reports of the Bureau of American Ethnology" published between 1881 and 1933. Anthropologists, artifact collectors, artist-writers, and historians provided primary evidential sources for athletic game motivation. Included were the major North American Indian games of archery, snowsnakes, hoop and pole, racket, shinny, and doubleball. Five general motives resulted from the research. They were gambling, amusement-diversion, ceremonial observance, increase of physical powers, and development of moral attributes. The data indicated that gambling, the wagering of stakes or game implements, was a highly significant motive of the North American Indians for holding all athletic games. All other motives were of minor or insignificant importance. (Author/RC)

**Psycho-Social Parameters in Young Female Long Distance Runners.**

Pub Date Oct 75

Note—15p.; Paper presented at the Canadian Psycho-Motor Learning and Sport Psychology Symposium (Quebec, Canada, October 1975)

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

**Descriptors—**Athletics, Physical Education, \*Psychomotor Skills, \*Running, Self Concept, \*Student Motivation, \*Womens Athletics

This study was designed to determine selected psycho-social parameters associated with a group of teenage, female long distance runners. These young women, who train by running approximately 50-90 miles per week, had scores in certain physiological and anthropometric measurements which were among the most advantageous for running ever recorded in a group of females. Each subject was administered the California Psychological Inventory (CPI), the Nowicki-Strickland Locus of Control test, and an open-ended questionnaire. Through comparisons with earlier norms for young women of this age group, it was found that the subjects scored higher than normal in academic achievement as a result of a more independent sense of self. In all other factors of the CPI the subjects were found to have normal scores. These results were in accord with the findings from the Locus of Control scores which showed that the subjects scored high in internality (i.e., these athletes are self-directed rather than other-directed). They seem to be motivated by the joy of running, the feeling of independence associated with running, and the close interpersonal relationship between team members. The data suggest that they are high in achievement motivation. (Author)

**A Model Program in Multi-Ethnic Heritage Studies. Annotated Bibliographies of Ethnic Studies Materials.**

Mankato State Coll., Minn. Minority Group Study Center.

Note—30p.

**EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage**

**Descriptors—**\*Annotated Bibliographies, \*Ethnic Groups, Ethnic Origins, Ethnic Relations, Ethnic Status, Ethnic Stereotypes, \*Ethnic Studies, Italian Americans, Polish Americans, \*Resource Materials

**Identifiers—**\*White Ethnic Studies

This annotated bibliography contains evaluations of selected source materials in ethnic studies for teachers and students. It is divided into Multi-Ethnic Resources, Italian-American Resources, Polish-American and Slavic-American Resources, German-American Resources, and Norwegian- and Swedish-American Resources. At the end of every annotated entry are evaluations made by various journals and the evaluation of the bibliography editor. The sources were examined to determine if they covered certain aspects of the ethnic group. These aspects included (1) history and conditions of the people in the particular country; (2) reasons for immigration; (3) experiences of the group and individuals as they underwent immigration and resettlement; (4) attitudes of other people in America toward the ethnic group; (5) discrimination and prejudice the ethnic group faced; (6) aspirations and goals of the group; (7) social, economic, political, and cultural conditions and processes; (8) positive and negative contributions of the group; (9) individual contributions; (10) ethnic experiences in rural and urban areas; (11) representation of the ethnic group in different walks of life worthy of emulation; (12) the question of acculturation versus pluralism; and (13) current developments towards pluralism or assimilation. **A Plan for Improving Human Relations.**

Harford County Board of Education, Bel Air, Md.

Pub Date 12 Dec 73

Note—15p.

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

**Descriptors—**Community Involvement, \*Cultural Pluralism, Ethnic Groups, Ethnic Relations, \*Human Relations Programs, \*Inservice Teacher Education, \*Personnel Selection, Racial Attitudes, Racial Discrimination, \*School Community Relationship

This is a position paper by the Harford County, Maryland Board of Education addressing the human relations problems in the school system. It enumerates the following specific plans: (1) The hiring of minority persons will be emphasized; minority persons will be promoted into leadership positions when possible; and in the hiring and promoting of school personnel, community recommendations will be welcomed; (2) Human relations in-service teacher education courses will be offered to promote understanding and appreciation of minority groups and cultures and to teach teachers optimal ways of communicating with all of their students; (3) The curriculum of every school and post-secondary institution will incorporate ethnic studies and courses which reinforce students' appreciation of and pride in their own culture as well as acceptance of others' differences; (4) All schools will try to insure that there are enough school activities to appeal to children from different backgrounds, and that individual needs and problems of each child be given attention; (5) Schools are to make efforts to involve their communities in understanding the needs, goals, problems, and accomplishments of the school and reach out to the community for effective mutual assistance. For each of these plans a policy statement, specific goals, rationale, and a specific plan of action are presented. (CD)

**Ethnicity and Education: Cultural Homogeneity and Ethnic Conflict.**

Pub Date 75

Note—11p.; Earlier version of this article was given as an address at the National Education Association Conference on Educational Neglect (February 1975)

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

**Descriptors—**\*Acculturation, Biculturalism, Bilingualism, \*Cultural Pluralism, \*Culture Conflict, Democratic Values, \*Educational History, Racial Discrimination, \*Socialization

Americans have long equated popular education with social cohesion and social mobility. After the American revolution, the school became a focus for patriotism and the institution where individuals learned how to become citizens. The textbooks of the mid-19th and early 20th century emphasized white, Anglo-Saxon, Protestant values. While the values of cultural homogeneity have dominated American education since the mid-19th century, they have never been implemented without conflict. Four of these

conflicts are particularly suggestive of both the extent to which ethnic alternatives were available in education and the limited tolerance for cultural variety in the schools. These are (1) the conflict over foreign customs and foreign languages (biculturalism and bilingualism), (2) the conflicts over parochial education, (3) the conflict between white and black Americans over socialization into a common mold, and (4) the conflict between the cultural values of American ethnic groups and the demands of school achievement. Certain developments in American educational history seem sufficiently clear to allow their use in current debates over ethnicity and the schools. Appeals for ethnic pluralism have a long history in American education and, especially in the 19th century, have sometimes been successful. But the ideological commitment to cultural homogeneity in American education has been stronger and has made public education highly resistant to ethnic pluralism. (RC)

**A Study of Locally Identified Needs for Institutional Improvement in the States of New Hampshire and Vermont: A Planning Document.**

ERIC Clearinghouse on Teacher Education, Washington, D.C.; New England Program in Teacher Education, Durham, N.H.

Spons Agency—National Inst. of Education (D-HEW), Washington, D.C.

Pub Date Dec 75

Note—16p.

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

**Descriptors—**\*Educational Development, \*Educational Research, \*School Districts, \*School Systems, State Departments of Education, \*Teacher Certification, Teacher Education, Teachers

This report grows out of efforts in two New England States, Vermont and New Hampshire, in cooperation with a regional research and development group, New England Program in Teacher Education (NEPTE), to revise teacher education programs for certification and approval so that they would be (1) local school system oriented and controlled, (2) based on goals and needs stated by the local school system, and (3) based on goals and needs-related training and education experiences for local teachers. NEPTE field staff in New Hampshire, Vermont, and Maine were requested to extract specific elements from State Department of Education materials submitted as staff development plans by local school districts. The field staff reports were organized by state and the following categories of need: (1) information needs, (2) training needs, (3) guidelines on policy clarification needs, and (4) support-mechanism needs. The information reported from Maine was not analyzable in its present form. The information from New Hampshire and Vermont, however, was readily accessible. The study showed that local school personnel are asking more sophisticated questions than the developers believe they are. Mission statements have had the effect of energizing local school personnel to a readiness and development level to which research and development groups must find ways to respond. (RC)

**Audio-Tutorial Programming with Exceptional Children.**

Pub Date 72

Note—12p.

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

**Descriptors—**\*Exceptional Children, Language Instruction, \*Learning Difficulties, \*Learning Disabilities, Mathematical Concepts, \*Phonotape Recordings, Retarded Children, Slow Learners, Spelling Instruction

The impetus for this study developed from a search for intervention procedures applicable to children with learning difficulties in the regular grades. It was noted that, when certain aspects of the curriculum which involved extensive repetition were being taught to pupils, approximately 90 percent of the interactions between teachers and pupils were either negative or neutral. It was decided to explore the use of the audio tape recorder in the three areas of spelling, math combinations, and preschool language (areas which exemplify this extensive repetition), thus replacing neutral and negative comments by audio-tu-

torial (A-T) programming. Three groups of exceptional children provided the data for this study: slow learning, educable mentally retarded, and trainable mentally retarded. The purpose of the A-T programming in math combinations was to provide intervention after the concepts had been taught, but prior to the time the pupil was required to use them as part of more advanced math skills. The purpose of the spelling program was to provide overlearning of words on the required spelling list. The preschool language program was used with severely retarded pupils, utilizing the Basic Concept Inventory as both a diagnostic device and as a subject matter source. These three programs are criterion referenced in their basic approach and the data collected to date on pupil progress and teacher reaction is encouraging. The characteristics of A-T programming offer promise as a way of meeting some of the problems encountered in the instruction of exceptional children. (BD)

**Early Identification: Predicting School Problems Before They Become Disabling.**

Arizona Univ., Tucson. Dept. of Special Education.

Spons Agency—Bureau of Education for the Handicapped (DHEW/OE), Washington, D.C. Pub Date 73

Note—10p.

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—Cognitive Measurement, \*Educational Diagnosis, \*Learning Difficulties, \*Learning Disabilities, \*Measurement Techniques, \*Predictive Measurement, Remedial Instruction

Screening for early identification of learning problems must be done through effective identification procedures which assure all children an equal opportunity for quality education. In order to do this, it is necessary to identify the essential characteristics of an effective screening program, the ways these characteristics might be implemented, and the possible pitfalls which must be avoided. Early identification is a predictive procedure which seeks to identify signs that warn of impending problems, and it should be proven that these warning signs and the methods of their recognition are reliable and valid predictors of future educational difficulties. Unvalidated screening programs are detrimental both to children not served and to those incorrectly classified. Thus, accuracy is an essential characteristic of an exemplary early identification program; the accuracy of the forecast must be demonstrated by specifying exactly what outcome behaviors are being predicted. It is, then, important to specify and measure reliably the set of predictors that one thinks can validly forecast failure in the basic academic skills one, two, or even three years in advance. A screening procedure must be practical as well as accurate. It must be acceptable to all involved (the child, the teacher, and the parents), and it must be cost effective, by utilizing inexpensive materials and requiring a minimum amount of child, teacher, and administrator time. (BD)

**Future Research Needs in Learning Disabilities.**

Arizona Univ., Tucson. Dept. of Special Education.

Spons Agency—Bureau of Education for the Handicapped (DHEW/OE), Washington, D.C. Pub Date [73]

Note—25p.

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—Culturally Disadvantaged, \*Educational Research, Exceptional Child Research, Handicapped, \*Learning Disabilities, \*Medical Research, Minimally Brain Injured, Researchers, Research Methodology, \*Research Needs, \*Research Problems, Scientific Research

This paper deals with future research needs and problems in learning disabilities, and is divided into the following two broad categories: (1) supporting conditions, which involve necessary prerequisites to the research effort; and (2) procedural considerations, which deal with methodological concerns. First, the problems posed by supporting conditions such as financing, training research personnel, gaining cooperation from practitioners, and maintaining research's

credibility are dealt with. Then, the second set of research needs, those involving procedural issues, are discussed. Two basic procedural needs are discussed. The first involves the fact that research in learning disabilities relies on established research paradigms in an effort to test competing falsifiable models. The second involves finding ways to bridge the gap between research and the unknowns that the practitioner must face daily. The paper maintains that the basic research problem confronting learning disabilities (or minimal brain dysfunction) is that of sample definition. The final section of the paper discusses categorization of disability (minimal brain dysfunction, learning disabilities, culturally disadvantaged deaf, blind, etc.), the use of these labels for administrative purposes, and the reaction to them by educational practitioners. This section also discusses the problems caused by categorization in classroom management, remedial programming, administration, and research methodology. (BD)

Identifiers—SWRL Beginning Reading Program Test, SWRL Drama Public Speaking Program Test Level I, SWRL Instructional Concepts Program Test, SWRL Level I Composition Skills Test

Criterion-referenced tests developed for four programs in the Southwest Regional Laboratory (SWRL) Kindergarten Curriculum are presented. Tests were developed to meet the following criteria: (1) they must accurately and thoroughly reflect the objectives and learning activities of the program, (2) when appropriate, they must be designed to allow for advanced placement of pupils within the program, (3) they should be usable by the classroom teacher, therefore administration and scoring must be clear and succinct, and length of the test feasible in terms of teacher time and pupil attention span, and (4) they must be produced in an inexpensive format, with as few components as possible. Tests were designed for The Beginning Reading Program, which stresses the decoding of words, word elements, word attacks, and letter names; The Instructional Concepts Program, which emphasizes the selecting and naming of exemplars of particular concepts; The Composition Skills Program, which concentrates on handwriting ability; and The Drama and Public Speaking Program, which centers on four skill areas: pantomime, public speaking, improvisation, and play production. The four tests are contained in the appendices. (Author/BJG)

Descriptors—Academic Achievement, Cognitive Processes, Higher Education, \*Learning Processes, Learning Theories, \*Models, Performance Factors, Recall (Psychological), \*Retention, \*Study Skills, \*Verbal Learning

Identifiers—Learning Outcomes, \*Nonverbatim Learning

The main objective of the Goteborg Project on Non-Verbatim Learning was to arrive at a commensurable description of the process and outcome of non-verbatim learning, also referred to as meaningful verbal learning. Such a description was thought to be a necessary presupposition for any explanatory models both in experiments on learning and in the broader context of academic performance. Four papers thought to represent the project's main research activities are presented. The papers are: (1) "Non-Verbatim Learning: Level of Processing and Level of Outcome", by Ference Marton; (2) "Non-Verbatim Learning: Level of Outcome as a Function of Level of Processing. I. Some Effects of Explicit Control", by Lars Owe Dahlgren; (3) "On Non-Verbatim Learning: Level of Outcome as a Function of Level of Processing. II. Some Effects of Anticipated Test Requirements", by Roger Saljö; and (4) "Ways of Learning and Patterns of Study", by Lennart Svensson. (BJG)

Directors of educational projects need to be aware of the consequences their decisions may have for evaluation and appreciate the need for working closely with their evaluators from the earliest planning stage. Attempting to address the needs of project directors and evaluators, this guidebook deals with one central aspect of project evaluation—measuring cognitive achievement gains. Its purpose is to provide the tools needed to conduct technically sound, interpretable evaluation studies. It covers the entire evaluation process from the administrative decisions in selecting an evaluation design to the details of collecting, analyzing, and reporting the data. After the introduction, Chapter 2 describes 12 hazards commonly encountered in evaluations which may invalidate otherwise sound studies. The hazards are discussed, and ways to avoid the hazard are outlined. Chapter 3 presents a procedural guide, in decision-tree form, for selecting a suitable evaluation model given a particular set of constraints. Chapter 4 presents the five evaluation models referred to in Chapter 3. Each model is summarized describing its characteristics, strengths, weaknesses, and considerations relating to its implementation. Chapter 5 deals with the details of data collection and Chapter 6 with summarizing and reporting of impact data. Appendices contain characteristics of some commonly used standardized tests and analysis of covariance worksheets. (RC)

**Public Policy Concerning the Use of Tests.**

Note—26p.

EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage

Descriptors—Civil Rights, Court Cases, \*Educational History, Equal Opportunities (Jobs), Ethics, Federal Legislation, Guidelines, Personnel Selection, \*Public Policy, Racial Discrimination, Sex Discrimination, Standards, \*Testing, \*Testing Problems, Test Interpretation, Test Validity

The article identifies major events that have impacted on public policy toward testing during the last 20 years. Events were classified, and an interpretation of the interrelationship of events was made. Events were classified as stemming

from writings of individual authors, publications of professional organizations, and actions taken by the Legislative, Executive and Judicial Branches of government. The publications of the professional organizations and actions taken by the three branches of government were described in detail. The writings of individual writers were acknowledged but not described. The major concerns of the initiators of events were identified as follows: (a) problems generated by the use of tests for making employment decisions, (b) problems of interpretation generated by semantic differences between the psychological and legal disciplines, (c) problems associated with and resulting from the impact of accountability on the test developer and user. A noticeable trend was the shifting of the foci of prime concerns from an emphasis on professional competency to an increasing emphasis on professional integrity. This, in turn, resulted in an increasing resortment to a legalism that holds the test developer and user accountable for their respective product and use. (Author)

Descriptors—\*Achievement Tests, Comparative Analysis, Disadvantaged Youth, \*Educational Research, Elementary Education, Grade 5, Guessing (Tests), \*Instructional Programs, Literature Reviews, \*Program Effectiveness, Reading Tests, Research Needs, Standardized Tests, Student Motivation, Test Bias, Test Construction, Testing Problems, Test Reliability, Test Results, Test Validity, \*Test Wiseness

The purpose of this report is to: (1) summarize the attempts that have been made to define and investigate test wiseness, particularly those efforts made at teaching test wiseness; (2) identify gaps and deficiencies in the existing body of research; (3) make recommendations as to the direction that future research in this area should take; and (4) report the results of two experimental efforts to teach test wiseness. As part of this project, two studies were conducted to determine the effects of a course in test taking skills on the reading achievement scores of two classes of fifth grade inner-city students. The students were divided, based on their reading test scores, into two groups: low achievers and high achievers. These groups were then divided into experimental and control groups. The students were introduced to the program unit which was designed to keep them motivated as well as develop skills in test taking. At the end of the course, the students were administered the Stanford Achievement Test-Reading and the Comprehensive Test of Basic Skills, Level II. The results of the study showed that although students who received instruction in test taking skills average higher scores, their gains were not statistically significant. (Author/DEP)

Anderson, Lorin W.  
Opportunity to Learn, Test Bias, and School Effects.

Pub Date Feb 75

Note—18p.; Paper presented at the Annual Meeting of the National Council on Measurement in Education (Washington, D.C., March 30-April 2, 1975)

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—Academic Achievement, \*Achievement Tests, Culture Free Tests, Elementary Education, \*Incidental Learning, Standardized Tests, \*Test Bias, Test Validity, \*Vocabulary

The purpose of the study was to examine test bias and the "non-effects" of schooling. Teachers were given a list of words selected from standardized vocabulary tests and asked to indicate the words they had taught. The words were classified by the grade level at which they were first introduced. Ninety-five third-grade students in four schools were given two 17-item subtests: subtests of items the students did and did not have an opportunity to learn. The difference in

the scores on the tests was used as an index of school effects of student vocabulary. Achievement test bias (when equated with content validity) was present. Students scored higher on the subtest containing items they had had an opportunity to learn. (Author/RC)

Identifiers—\*Armed Services Vocational Aptitude Battery

This supplemental guide to the interpretation of the Armed Services Vocational Aptitude Battery (ASVAB) results in local guidance and counseling programs is designed for use by high school counselors, service test administrators, and educational specialists. This addendum to the original study presents expectancy tables for 28 civilian vocational-technical courses in which 5,211 students were enrolled in 25 high schools situated in the northeast, midwest and far west regions of the country. Also included in this note is a suggested ASVAB interpretative guide. School samples were obtained through voluntary participation. The investigators are indebted to all participating counselors, administrative personnel, principals, and students. This document is an abstract of a more comprehensive treatment of the data contained in Armed Forces Vocational Testing Group (AFVTG) Technical Research Report 74-5 (January 1975) (ED 109 258). The Relationship Between Graduating Senior Nominations of Valuable and Non-valuable Courses and End-of-Course Student Ratings.

Washington Univ., Seattle. Educational Assessment Center.

Report No—EAC-P-271b

Pub Date Jul 75

Note—12p.

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—\*College Students, Comparative Analysis, \*Course Evaluation, Effective Teaching, Higher Education, Participant Satisfaction, Questionnaires, Seniors, Student Evaluation, Student Opinion, Summative Evaluation, \*Teacher Rating, \*Time Perspective, \*Validity

Identifiers—\*Washington University

The College of Arts and Sciences Senior Survey asked students to nominate their most and least valuable courses during their undergraduate careers. The end-of-course student ratings were compared between 40 courses rated as valuable and 16 courses rated as nonvaluable. All differences were statistically significant, with valuable courses getting more favorable ratings on all items. Items which most strongly discriminated between the two groups tended to be those addressing broad educational outcomes, while items showing least discrimination dealt with the mechanics of good teaching. Descriptors—\*Bayesian Statistics, Behavioral Science Research, \*Classification, Higher Education, Hypothesis Testing, Matrices, Measurement Techniques, Prediction, Predictive Validity, \*Predictor Variables, \*Probability, \*Questionnaires, Response Style (Tests), Statistical Bias

Identifiers—Canada, \*Contingency Tables, Moonan (W J)

A procedure for predicting categorical outcomes using categorical predictor variables was described by Moonan. This paper describes a related technique which uses prior probabilities, updated by joint likelihoods, as classification criteria. The procedure differs from Moonan's in that the outcome having the greatest posterior probability is selected as the prediction regardless of misclassification cost. It also differs in method of screening and weighting the predictor variables, and treats the problem of small-sample bias. Applications, to date, are in the analysis and use of questionnaire responses to predict categorical outcomes, namely, voluntary, academic, and military attrition from a Service College. Classification efficiency appears to be comparable to that of the Moonan technique. (Author)

The Effect of Visual Format Upon the Test Performance of Spanish-Speaking Students.

Pub Date [Sep 75]

Note—11p.; Paper presented at the Annual Meeting of the American Psychological Association (Chicago, Illinois, September 1975)

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—Bilingual Students, Comparative Analysis, \*Elementary School Students, Listening Comprehension, Lower Class Students, Multiple Choice Tests, \*Organization, Primary Education, \*Response Mode, \*Spanish Speaking, \*Testing, Testing Problems, Test Results, Visual Measures, Vocabulary

Identifiers—\*Interamerican Tests of General Ability, TOGA Level I OV

The Inter-American Test of General Abilities (TOGA) for bilingual children has parallel Spanish and English forms which have been used to determine language proficiency and dominance. Generally, there has been little emphasis on measuring such physical test features as size, spacing, color, and typeface. The purpose of this study was to determine whether the Oral Vocabulary subtest of TOGA, Level I, significantly affects the test performance of Spanish-speaking youngsters. Results indicate that spacing is a significant factor in the test performance of Spanish-speaking youngsters on this test. It is emphasized that lack of research concerning format factors, particularly at the elementary school level, requires prompt action. (BJG)

Descriptors—Academic Aptitude, Aerospace Technology, Biographical Inventories, Communications, Cost Effectiveness, Grade Prediction, Grades (Scholastic), \*Graduate Study, Higher Education, Interest Tests, Management, \*Officer Personnel, Operations Research, \*Predictor Variables, \*Selection, Statistical Analysis, Systems Analysis, \*Validity, Vocational Interests

Identifiers—Naval Postgraduate School, United States Navy

Confined to existing monetary and human resources, the Navy's Postgraduate Selection Board is responsible for selecting officers for graduate education who will both perform well and develop skills applicable to later Navy billets. Although different methods have been employed for this selection process, most decisions have

been based on officer fitness reports and prior academic records. Data from the Graduate Record Exam (GRE), Strong Vocational Interest Blank (SVIB), and a biographic data form were used in attempts to predict Naval Postgraduate School grade averages in four separate curricula: Operations Research/Systems Analysis, Aeronautical Engineering, Communications Management, and Management. Results indicate that academic aptitude and biographic data could be used for selection to the Naval Postgraduate School. Implementation would require the availability of biographical data and GRE scores for all candidates. The costs of developing these data would seem small when compared to (1) the time saving that could accrue by streamlining the postgraduate selection process, and (2) the more effective use of officer/student human resources. (BJG)

Test Bias and Construct Validity.  
Pub Date Sep 75

Note—31p.; Paper presented at the Annual Meeting of the American Psychological Association (83rd, Chicago, Illinois, September 1975)

**EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage**

Descriptors—Caucasians, Comparative Analysis, Culture Free Tests, Elementary School Students, Individual Differences, Intelligence, \*Intelligence Tests, \*Nature Nurture Controversy, Negroes, \*Racial Differences, Socioeconomic Status, Standardized Tests, Statistical Analysis, \*Test Bias, Test Reliability, \*Test Validity  
Identifiers—Peabody Picture Vocabulary Test, Ravens Progressive Matrices, Stanford Binet Intelligence Scale, Wechsler Intelligence Scale for Children, Wonderlic Personnel Test

The several statistical methods described for detecting test bias in terms of various internal features of a person's test performances and the test's construct validity can be applied to any groups in the population. But the evidence regarding groups other than U.S. blacks and whites is either lacking or is still too sketchy to permit any strong conclusions. The evidence regarding black-white comparisons, however, is based on a number of well-known, widely used, and quite diverse standardized individual and group tests of intelligence given to a large representative sample of whites and blacks. The results are unequivocal: none of the several subjective indices of cultural bias shows any significant indication of bias in any of these tests when they are used with blacks and whites. Correlation of raw scores with age, internal consistency reliability, rank order of item difficulty, relative difficulty of adjacent items, item correlation with total score, loadings of items or tests on the general factor, and relative frequencies in choice of error distractors—all are substantially the same in black and white groups. It is concluded that these standardized tests of intelligence—the Peabody Picture Vocabulary, Raven's Progressive Matrices, Wechsler Intelligence Scale for Children, Stanford-Binet, Wonderlic Personnel Test, and most likely other similar tests—are not at all culturally biased for blacks and whites. They behave statistically the same in both racial groups and do essentially the same job in both groups. (Author/DEP)

A Description of the Implementation of Individually Guided Education in Thirty Wisconsin School Districts.

Pub Date Aug 75

Note—9p.

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

Descriptors—Administrator Attitudes, \*Evaluation, Formative Evaluation, \*Individualized Programs, Predictor Variables, \*Program Development, School Districts, \*Statistical Analysis, Surveys, Teacher Attitudes

Identifiers—IGE Implementation Survey, \*Individually Guided Education, Wisconsin

This study attempts to examine and document the implementation pattern of Individually Guided Education (IGE) across 30 Wisconsin school districts operating IGE programs in their schools. Using these results, the data were then analyzed to determine which of the seven IGE components examined, contributed most to a favorable overall or Total IGE Implementation Score. The seven components are: organizational arrangement, instructional programming, materials, measurement and evaluation, home school

relations, facilitative environments, and research and development. The results indicated that the pattern of IGE implementation across the districts participating in the study is generally adequate or approximately 50 percent along the way to an ideal implementation of the IGE system. Only two of the IGE Components, Home School Relations (35 percent implementation) and Research and Development (33 percent implementation) were areas where improvement and modification can be justified now. The remaining analyses, which consisted of correlational techniques, suggested that districts having a generally favorable Total IGE Implementation Score received favorable ratings on the implementation of the MUS-E Organization, Instructional Programming, and the Measurement and Evaluation Components. At this point in time it appears that Home School Relations, Materials, and Research and Development Components are less a part of the implementation scene of IGE. (Author/DEP)

Descriptors—Cost Effectiveness, Educational Assessment, Educational Legislation, Educational Planning, Evaluation, Information Dissemination, Information Utilization, Interviews, Management, \*Program Effectiveness, \*Program Evaluation, Research Problems, Resource Allocations, \*State Departments of Education, \*State Programs

Identifiers—\*California (Sacramento)

A centralized evaluation unit within the California State Department of Education is responsible for evaluating programs administered by the state. Focusing on these educational program evaluations, the principal objectives of this study were to: (1) Describe the major components of the current program evaluation system; (2) Examine the planning of state program evaluations; (3) Analyze the scope, quality and utility of state program evaluations; (4) Examine the coordination of state evaluation activities; (5) Analyze the methods by which evaluation results are disseminated; and (6) Recommend improvements when necessary. In conducting the study, a total of 60 individuals were interviewed. These included staff in the Departments of Education and Finance, staff to several legislative committees, members of the State Board of Education, personnel in local education agencies, representatives of such groups as the California School Boards Association, the California Association of School Administrators, and the California Teachers Association, and individuals with expertise in evaluation from universities and private organizations in the state. The evaluation study interview questions, a list of evaluations and reports reviewed, the legislation which established the Educational Management and Evaluation Commission as part of the State Board of Education, and facts about commission membership are provided in the appendices. Report No—AD-A009-159; AFOSR-TR-75-0593

Pub Date Dec 74

Note—107p.

Available from—National Technical Information Service, Springfield, Virginia 22161 (Order No. AD-A009 159, HC-\$5.25, MF-\$2.25)

Document Not Available from EDRS

Descriptors—Information Processing, \*Intellectualization, \*Man Machine Systems, \*Measurement Techniques, \*Perceptual Motor Coordination, Psychomotor Skills, Stimuli, \*Task Analysis, Testing, Tracking

The conjecture was investigated that the intellectual load carrying capability for selected intellectual functions is identifiable and measurable. Intellectual load carrying failure was defined as the point at which a change in transfer function

components occurs as a tracking and a scaled intellectual function were concomitantly performed. The scaled intellectual functions were drawn from the Guilford Structure-of-Intellect model. The transfer function components included amplitude ratio and phase lag as defined by the frequency-response analytic method. Anticipated differences between individual and between intellectual function were found. The ability to isolate the intellectual load carrying threshold for individual subjects and for individual intellectual functions was demonstrated. (Author)

Evaluation of One Type of Non-Traditional Program of Higher Education.

Pub Date 2 Apr 75

Note—21p.; Paper presented at the Annual Meeting of the American Educational Research Association (Washington, D.C., March 30-April 3, 1975)

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

Descriptors—Academic Achievement, Academic Failure, \*College Programs, College Students, \*Educational Alternatives, Educational Innovation, Evaluation Methods, Higher Education, Mental Health, \*Outdoor Education, \*Program Evaluation, Relevance (Education), \*Self Concept, Statistical Analysis, Student Attitudes, Student Evaluation

Identifiers—CLASP, \*Creative Learning Application Sociological Princip, Nontraditional Education, Wilderness Education Programs

Creative Learning through the Application of Sociological Principles (CLASP) is a nontraditional program designed to help students develop their own concepts, theories, and skills during a nonstructured sociology semester. The program consists of seven phases: (1) first week: testing, simulating, and preparation; (2) second-third weeks: human relations and survival lab in wilderness; (3) fourth-seventh weeks: post-wilderness community problem solving upon return to campus; (4) eighth week: midterm evaluation; (5) ninth-twelfth weeks: skilled experiences; (6) thirteenth-fourteenth weeks: reporting, sharing, discussing, and analyzing; and (7) fifteenth-sixteenth weeks: evaluation and grading. A group of students who had completed two evaluation phases of an outdoor survival program and two

different CLASP groups all involved in wilderness educational programs, were examined together with two control groups. The control groups were a conventional beginning class in sociology and a conventional T-group. Results significantly favor CLASP communities over T-groups and control groups in terms of sociological content, changes in self conception, and academic achievements. Strong positive reactions rated the CLASP program as the best learning experience in the students' college career. The program has created considerable "noise" in the traditional academic system for nontraditional education. Recommendations are made for institutions to adapt this survival-type program to the needs of each college department. (Author/BJG)

**Transactional Evaluation and the Improvement of Instruction.**

Pub Date Apr 75

Note—14p.; Paper presented at the Annual Meeting of the American Educational Research Association (Washington, D.C., March 30-April 3, 1975)

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—Change Strategies, Cost Effectiveness, \*Educational Change, Evaluation Methods, Evaluation Needs, Formative Evaluation, \*Individual Needs, \*Institutional Role, Instructional Improvement, Models, \*Participant Characteristics, Professional Personnel, \*Program Evaluation, Questionnaires, Role Perception, Summative Evaluation

Identifiers—\*Transactional Evaluation

Because discrepancies between individual needs and institutional roles are so often neglected in planning educational change, attention to this dimension may prove worthwhile. Evaluators who have omitted the evaluation of the effects of educational innovation on the total system—not just the students—may find it productive to assume this additional responsibility. It is hypothesized that greater productivity may be realized if institutions undergoing change attend to and respond to the real and the projected anxieties of all those responsible for and affected by the change, since implementors may undergo greater changes than clients. Those involved in effecting change may need assurance that they can be competent in their new roles, and that their needs will be identified and responded to. Such identification and supportive response is a key to establishing a climate where change can be productive and "non-events," or business-as-usual teaching under the cloak of a project title or number, will be at a minimum. The transactionally oriented evaluator could participate in the usual formative, summative and cost tasks, but he would also ask additional questions about (1) Who is involved? (2) What is expected of them? (3) How are they threatened by change? (4) How do they make compromises between their needs and the reward system? (5) In what way, and how adequately does the institution assess the consequences of change, not only on the system clients, but also on the members of the system? (Author/BJG)

**A CBTE Program Design Incorporating Comparative and Retention Data for Evaluation.**

Pub Date Mar 75

Note—11p.; Paper presented at the Annual Meeting of the American Educational Research Association (Washington, D.C., March 30-April 3, 1975)

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—Academic Achievement, Behavioral Objectives, Comparative Analysis, \*Course Evaluation, \*Elementary School Science, Higher Education, Instructional Improvement, \*Methods Courses, \*Performance Based Teacher Education, Performance Factors, Self Evaluation, Student Evaluation, Student Teachers

Identifiers—CBTE, Central Michigan University, \*Competency Based Teacher Education

The Competency Based Teacher Education (CBTE) effort in science methods has been responsible for generating a different approach to university-level instruction. Student achievement of specified goals is greater than in the traditional program, and study perceptions of the instructional experience suggest that competency-based

instruction emphasizes, more than the traditional approach, such things as independent, activity-oriented, assignments and that such assignments contribute more to success in the course than instructor interactions or assigned readings from text. The successes of the CBTE science methods course do not appear to be translated into differences in behavior during a later directed teaching experience. Overall, Central Michigan University (CMU) students are viewed as successful in lesson planning and lesson teaching in the directed teaching experience, whether they participate in CBTE or non-CBTE sections of the science methods course. The data of the current project suggests that CBTE has effects at the level of the university classroom, but that these effects are not translated into behavioral differences in the classroom. The presence or absence of field experiences concurrent with the CBTE modules does not seem to moderate these results. (Author/BJG)

Identifiers—Minneapolis Public Schools, \*Minnesota (Minnesota)

The social, mental and physical health of children in target Minneapolis Schools has been carefully studied. The intent of this project was to design and implement a program which would improve health. This report discusses the progress of the project for the first year. The project's activities centered around planning, needs assessment and development of the health program. The format of the report is as follows: (1) statement of project objective, (2) description of project activities to accomplish the objective, and (3) evaluation findings and statement as to accomplishment of the objective. Important considerations were that both the program and the process of its development be usable and adoptable by others, that the program bring parents, community, and schools together as partners to improve children's health, and that the program enable students to acquire the knowledge, skills, and attitudes necessary for life-long health practices. **Final Evaluation Report on Title III ESEA Project "Eliminating Sex Bias in Education" 1974-1975 for Special School District No. 1, Minneapolis, Minnesota.**

Minneapolis Public Schools, Minn.

Pub Date 30 Jun 75

Note—76p.

EDRS Price MF-\$0.76 HC-\$4.43 Plus Postage

Descriptors—Courses, Criterion Referenced Tests, \*Curriculum Development, Curriculum Evaluation, Data Analysis, Elementary Secondary Education, Inservice Teacher Education, \*Instructional Materials, Instructional Materials Centers, Librarians, Parochial Schools, \*Perception, Program Development, \*Program Evaluation, Public Schools, \*Sex Discrimination, Student Attitudes, Students, Teacher Attitudes

Identifiers—Elementary Secondary Education Act Title III, ESEA Title III, Minneapolis Public Schools, Minnesota (Minnesota)

The goal of this project was to eliminate sex bias in education through the development of student and teacher awareness of sex bias. Four objectives were developed for the first year project: (1) the development and implementation of non-sexist curriculum in grades 4-12, (2) the development of teachers' and librarians' awareness of sexism in learning materials, (3) the development of dissemination materials and a resource center of nonsexist learning materials, and (4) the measurement of student awareness of sex bias. To meet these objectives, the project developed three elementary nonsexist units of instruction and 19 secondary nonsexist lessons which were taught in Minneapolis public and parochial schools, conducted inservice training for teachers and librarians, created a resource center of nonsexist learning materials, and developed criterion-referenced test items to measure student awareness of sex bias. Evaluation involved the monitoring of the development and administration of instruments to measure student and teacher ratings of the lessons and the validation of each lesson by two curriculum experts: inservice training sessions were evaluated by means of participant responses to surveys developed by the evaluator. The progress toward the development of the resource center was monitored, and the results of the criterion referenced testing were analyzed, item difficulties, item discrimination and test reliabilities computed. Findings indicate that the project was successful overall in meeting its objectives. (Author/RC)

**Expressive Arts through Perceptual-Motor Development: Final Evaluation 1973-1974. An ESEA Title III Project.**

Glen Haven Achievement Center, Fort Collins, Colo.

Spons Agency—Minneapolis Public Schools, Minn. Dept. of Research and Evaluation.

Report No.—C-73-23

Pub Date Aug 74

Note—49p.

EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage

Descriptors—\*Aesthetic Education, \*Child Development, \*Creative Expression, Cultural Awareness, Curriculum Development, Dance, Drama, Fine Arts, Individualized Instruction, Music Activities, Parent Participation, \*Perceptual Motor Learning, Primary Education, Problem Solving, \*Program Evaluation, Self Concept, Teacher Education, Tests, Values

Identifiers—Bethune Elementary School, Elementary Secondary Education Act Title III, \*Minneapolis Public Schools, Minnesota (Minneapolis)

The purpose of this program was to provide an expressive arts program for children in kindergarten through grade three. This program emphasized perceptual-motor development leading to expression in the arts; expression through music, art, movement or dance, and drama. It was designed to provide an atmosphere for creativity, non-verbal expression and problem solving, aesthetic skill development, extended cultural awareness, and valuing. It offered individualized perceptual training for children deficient in such development. Planned parent and community involvement were built into this program. It was designed to generate resource materials and models leading to the development and implementation of curriculum. Program ob-

jectives were evaluated by utilization of existing tests and measurement instruments, daily records and case studies, teacher observations, and reports from outside evaluators with recognized expertise. These instruments were used to measure perceptual motor skills, related perceptual-motor behaviors, and academic abilities which may have changed as a consequence of the program: Purdue Perceptual-Motor Survey, Virginia Psycho-Motor Screening Instrument, Peabody Individual Achievement Test, and Goodenough Draw-A-Man Test. Statistical data and reports by outside evaluators support the position that the initial objectives of the program were largely met. (Author/RC)

Johnson, Lary

An Evaluation of the Minneapolis Public Schools' Human Relations Recertification Program (Educ 521).

Minneapolis Public Schools, Minn. Dept. of Research and Evaluation.

Report No.—C-74-52

Pub Date Jun 75

Note—44p.

EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage

Descriptors—\*Behavior Change, Elementary Secondary Education, \*Human Relations Programs, Interaction, \*Performance Based Teacher Education, Program Effectiveness, \*Program Evaluation, Public Schools, Questionnaires, Student Teacher Relationship, Teacher Attitudes, Teacher Behavior, \*Teacher Certification

Identifiers—Human Relations Recertification Program (Educ 521), Minneapolis Public Schools, Minnesota (Minneapolis)

About 3,000 educators have participated in Educ 521 human relations recertification programs sponsored by the Minneapolis Public Schools (MPS). In February 1975, the 755 participants who had processed their recertification forms were mailed a questionnaire to determine overall program effectiveness, differences among programs, and directions for future human relations education. Based on the post-program reactions given by 75 percent of the participants, it was the evaluator's opinion that, considering the conditions under which the program was operating, the 521 program was valuable. Not all participants became more competent in the areas specified by Educ 521; in fact, a substantial percentage indicated that the program was not helpful. However, two-thirds of the participants did say that the program helped them increase their understanding of various ethnic/cultural groups, biases, and power/powerlessness. Three-fourths said they improved their communication skills; about half said they learned skills that could be used in the school setting; and about half said they interacted differently in the school setting as a result of the 521 program. Recommendations were made to offer a variety of 521 programs that would meet the different needs of potential participants, define clearly the goals and activities of each program, offer voluntary in-depth human relations programs beyond the 521 program, emphasize real experiences in all programs, and explore some new approaches. (Author/RC)

Staff Members' Preferences for Characteristics of Educational Programs in Minneapolis West Area Schools.

Minneapolis Public Schools, Minn. Dept. of Research and Evaluation.

Report No.—C-74-54

Pub Date Apr 75

Note—37p.

EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage

Descriptors—Age, Community Involvement, Data Analysis, \*Educational Alternatives, Educational Innovation, \*Educational Programs, Elementary Secondary Education, Individual Differences, Parent Attitudes, Parent Participation, Parent School Relationship, Questionnaires, Student Evaluation, Student Responsibility, Surveys, \*Teacher Attitudes, Teaching Methods, Team Teaching

Identifiers—\*Minneapolis Public Schools, Minnesota (Minneapolis)

The results of a survey distributed to teachers in the West Area of the Minneapolis Public Schools concerning their preferences in the school setting indicate that teachers: (1) differ in

their preferences for instructional settings, (2) prefer flexibility and variety in school curriculum, schedules, and instructional methods, (3) desire the utilization of persons other than teachers, prefer team teaching, and think students should direct some of their own learning, (4) want parents more directly involved in their children's education, (5) prefer their students to be the same age or grade levels, (6) prefer both active and passive instructional learning methods, (7) believe that specific basic skills should be taught in specific courses, (8) stress the importance of affective education, (9) think that student evaluation requires both the assessment of individual progress and a comparison between the individual student and same-aged students, and (10) question extensive student responsibility within the learning situation. Appendices provide both information about staff and parent preferences for alternative education programs, and the West Area Staff Survey. (BJG)

Descriptors—Achievement Gains, Achievement Tests, Basic Skills, \*Compensatory Education Programs, Disadvantaged Youth, \*Elementary Education, Elementary School Mathematics, \*Individualized Instruction, Individualized Programs, \*Mathematics Instruction, \*Program Evaluation, Student Attitudes, Teacher Attitudes, Test Results

Identifiers—Elementary Secondary Education Act Title I, Hall Elementary School, \*Minneapolis Public Schools, Minnesota (Minneapolis)

The Individually Prescribed Instruction (IPI) mathematics project at Hall Elementary School in Minneapolis completed its fourth year of operation in June 1973. The program is organized on a continuum of 415 math skills grouped into eight levels according to increased difficulty. Students progress through the continuum at their own rate as they master math skills. Children in grades 2-6 participated in the 1972-1973 project. Achievement scores on the Modern Math Supplement to the Iowa Tests of Basic Skills have improved each year of the IPI project. Contrary to children in many disadvantaged areas, Hall students do not compare less favorably with publisher norms as they become older; the IPI students hold near the percentile rank they had as third graders as they progress through school. Hall students have expressed more positive attitudes toward math than those in comparison schools. Hall teachers have supported the IPI project, emphasizing the individualized approach and the students' positive attitudes. IPI was not to be continued in the 1973-74 school year. (Author/BJG)

Olien, C. N. And Others

A Social Systems Approach to Evaluation Research.

Pub Date [Apr 75]

Note—14p.; Not available in hard copy due to marginal legibility of original document

EDRS Price MF-\$0.76 Plus Postage. HC Not Available from EDRS.

Descriptors—Adult Education Programs, Audiences, Delivery Systems, \*Educational Television, Elementary Education, Evaluation, \*Information Dissemination, Mass Media, \*Models, Nutrition Instruction, Organization, Prediction, \*Program Evaluation, Research, Social Action, Social Systems, Student Reaction, \*Systems Analysis

Identifiers—Mulligan Stew

An information-control systems model for evaluation of adult education programs is offered and illustrated. The model is based upon identifying principal subsystems, such as source, channel and audience, which are involved in initiation, production, delivery and reception of educational messages. These subsystems are seen as separate

but interdependent, having the power singly or jointly to make crucial decisions about generation, dissemination or withholding of information. The extent to which these subsystems may in fact exert such controls has been demonstrated in a variety of research studies, many in the mass communication area. Specific application of the model is illustrated in the evaluation of the "Mulligan Stew" television series which, although directed at a young audience, has implications for evaluation of any adult education program which involves extensive use of the mass communications media. The study included before-after, student responses in eight schools and estimates of such response from nutrition specialists, information specialists, television station personnel, and teachers. In terms of final outcome, the Mulligan Stew results generally and strongly support the information control systems model, and testify to its utility in evaluational research. (RC)

Descriptors—Culture Free Tests, Disadvantaged Environment, \*Ethnic Groups, Evaluation, Genetics, Heredity, \*Intelligence Differences, Minority Groups, Models, \*Nature Nurture Controversy, Negro Achievement, Negro Youth, Prenatal Influences, Probability Theory, Psychometrics, \*Racial Differences

Identifiers—\*Jensen (Arthur)

This paper, focusing on differences between Caucasians and Negroes in the United States, summarizes from a "scientific standpoint" the main facts and theoretical issues involved in the study of human racial differences and behaviors. Three principles are considered to govern the orientation of this document: (1) objective research and knowledge are possible and should not be entangled with political and social policy; (2) phenomena are better explained by theory as opposed to ad hoc explanations; and (3) conclusions expressed in terms of statistics and probabilities must be accepted, with their tentative nature kept in mind. Among the topics dealt with are: (1) mutation and drift, migration, and selection processes affecting evolutionary differentiation; (2) formulation of heritability of group differences; (3) psychometric evidence for the author's conclusions; and (4) hypotheses of culture-biased tests and environmental foci. It is reiterated that it is highly probable that genetic as opposed to environmental factors are involved to a substantial degree in the lower average IQ of American Negro groups. (Author/AM)

Descriptors—Biculturalism, Bilingual Education, Bilingual Schools, Bilingual Students, Bilingual Teachers, \*Conference Reports, Economically Disadvantaged, Educationally Disadvantaged, \*Educational Policy, \*Educational Problems, English (Second Language), Ethnic Groups, Instructional Materials, Interagency Coordination, Language Programs, \*Minority Group Children, Non English Speaking, Puerto Rican Culture, \*Puerto Ricans, Teacher Education, Teacher Recruitment

These conference proceedings deal with the exploration of the problems faced in educating Puerto Ricans and in seeking solutions for these same problems with a focus on the programs for school age children. Major areas discussed in the conference proceedings are: the cultural background of the Puerto Rican child, testing and

placement of Spanish speaking children, views of state-side educators, overcoming the language barrier of the Spanish speaking child (pre-school English instruction), English as a second language (reading), English as a second language (language and bilingual programs), observation visits to schools and other institutions, recruitment and training of teachers of English for Spanish speaking children, preparation of instructional materials, and affective cooperation of Puerto Rican agencies. **Identifiers—**\*England, West Indians

This paper proposes measures for policy implementation to meet the educational needs of minority group children from "New Commonwealth" (newly independent) countries residing in England. An admission of the importance of education of these children, the need for more resources to be made available to them, and the extent to which these children's needs and those of the indigenous community are similar are stated to be relevant considerations. The main results of systematic research findings and experience in multi-racial schools are given along with the main implications for action and research. Specific recommendations submitted include requests for additional resources from central government, the establishment of a national policy for deprived urban areas, several programs for local education authorities (such as advisory teams on multi-racial education, multi-racial curricula development, and assessment in multi-racial schools), and teacher training with the adoption of positive policies to recruit and train professionals from minority backgrounds. **Identifiers—**College Bound Programs, \*New York (New York)

This dissertation investigates the factors operant during the high school years which facilitate or inhibit the entrance into college of a group of low-income students in a New York City high school. A qualitative approach is used to examine a group of students in a compensatory education program, the transactions that occurred between them, their educational environment as they perceived it, and their social world. A review of the literature considered in this study includes topics such as the relationship of education to occupational attainment and factors influencing school achievement. A section on people, setting, and treatment discusses antecedents to the program and the specific program itself. Two case studies of a pair of students who contradicted the predictions are described along with two additional case studies of a pair of students whose completion might have been predicted. A

concluding discussion examines each pair of terms of similarities and differences, and both pairs in terms of such foci as differential experiences of the program, group membership, and others. Three categories comprising the mix of person-program qualities resulting in completion or non-completion of the program are presented. A series of general implications and implications for counselor training are also included. (Author/AM)

**Identifiers—**New York (New York), Puerto Rico (San Juan)

This anthropological study examines whether sociocultural factors are basic to the etiology of stuttering through (1) an investigation of the incidence of stuttering in a single ethnic group, Puerto Rican rural migrants living in two different cultural milieus (San Juan and New York City), and (2) a comparison of the sociocultural variables in the lifeways of the migrants in the two cities. The study focuses on the validity of the theory that stuttering is a deviant linguistic response to sociocultural stress. A section on perspectives in stuttering provides an overview, a literature review, methodology, procedures, and statistical findings. A cultural-historical perspective of Puerto Rico covers topics such as the Spanish heritage and the North American overlay, rural subcultures in Puerto Rico, and the migrants in San Juan. A cultural-historical perspective of the United States likewise provides a discussion of the migrants in New York City, a comparison of the migrants in San Juan and in New York, contemporary American working-class values, and the American heritage. The final section discusses stuttering and stress. A series of inferences derived from the study are made, among them being the relation between dominant values of a culture and the prevalence or lack of stuttering, and the importance of cultural and socioeconomic factors. Suggestions for further research are made. (Author/AM)

**Identifiers—**District of Columbia, Michigan, Mississippi

This study compares information about the attitudes of black children in a predominantly black urban community with that from a previous study on Mississippi and Michigan children in which no difference in race attitudes and no relationship between racial attitudes and self-concept were found. The report studies a sample of four- and five-year-old black children, testing them on two occasions a year apart with the stated intent of assessing the impact of three demographic

settings (an integrated northern area, an all black rural southern area, and an all black urban mid Atlantic area) on self-concept, racial attitudes, and self-identification. Self-concept and I.Q. were found to be positively related at the retesting. The D.C. children had good positive self-concepts and showed positive changes in self concept and I.Q. at the retesting. It is suggested that the black child feels better about himself when he is surrounded by those of a similar group membership. (Author/AM)

**Identifiers—**Elementary Secondary Education Act Title I, ESEA Title I, \*New Hampshire

This report studies the specific attributes of educational disadvantage which prevent satisfactory achievement in New Hampshire children. It is based on a sample of approximately 10 percent of the state school districts, which are divided into three levels of economic status, three levels of achievement, and an urban, suburban, or rural category. Sections listed are comprised of exhibits that include methodology, educational disadvantage, perception of needs by type of district, and areas for further study. The exhibits are considered to reveal many insights into the elements of disadvantage, the quality of the school-family relationship, the usefulness of current programming for children with special problems, and other subjects. A complex relationship is said to exist between educational disadvantage and levels of economic status and achievement in school districts. Communication problems between school and home, and the tendency by each group to point the finger at the other are listed as findings derived from the study. (AM)

**Native Language and Black Dialect Interference in the Oral Reproduction of Standard English by Puerto Rican Pupils.**

Pub Date [72]

Note—13p.

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

**Descriptors—**Bilingualism, Bilingual Schools, Bilingual Students, Educational Problems, \*Language Handicaps, Language Research, \*Minority Group Children, Native Speakers, Non English Speaking, Non Standard Dialects, \*Puerto Ricans, \*Reading Achievement, Reading Difficulty, \*Second Language Learning, Sociolinguistics

The purposes of this study are stated to be twofold: (1) to determine the relative effects of the native language and black dialect influences on the oral English performance of Puerto Rican pupils in mainland schools and (2) to assess the relationship of these sources of linguistic interference with aural ability in English, reading ability in English, and time in mainland schools. The oral repetition technique is used with 80 Puerto Rican children enrolled in grades 2-4 in a predominantly Puerto Rican bilingual school. Findings indicate a significant positive correlation between degrees of black dialect interference and time in mainland schools. Significant inverse correlations are indicated between degree of black dialect interference and reading ability in English and between degree of Spanish interference and aural ability in English. Time in mainland schools is said to be significantly related to aural ability in English but not to reading ability. A relationship approaching significance between the degree of native language interference and reading ability in English is considered to indicate a need to explore more systematic approaches to the teaching of English to Spanish speaking students. **Identifiers**—New York (New York), Puerto Rico

This report separates Puerto Ricans into four major subgroups: those who were born on the mainland and live either in New York City, or elsewhere in the United States, and those who were born in Puerto Rico and live either in New York City, or elsewhere in the United States. The report places considerable emphasis on those born on the mainland. A section on overall observations describes the situation on the mainland and presents the diversity characterizing the four subgroups. Sections on demographic, social, economic, and housing conditions, and on the New York City area include topics such as migration, vital statistics, education, employment, income, family and marital status, quality of housing, and geographic distribution of the group in the New York City area. A final section on future migration from the island suggests that the Puerto Rican migrant of the future will resemble the general United States population more closely than did the earlier migrants, in terms of increased schooling, better jobs, higher earning, lower fertility rates, and an urban rather than rural background. **Identifiers**—Alabama, Arkansas, Georgia, Mary Holmes College, Mississippi

This document reports on a conference, concerning rural blacks in four Southern states, that has as its theme the definition of the problem and research priorities relating to the development of a sense of community. A section on formal presentations includes topics such as democracy, economic progress, and research in the southern region, the university's role in rural development and research, the conditions in rural black Arkansas in 1973, the emergent or extant black community, and adolescent pregnancy. A separate section summarizes conference proceedings, followed by discussion summaries organized into four research areas, which include suggestions for both research and action. The conference is considered to have been valuable and worthwhile in that, to some extent, it provides information and action to improve the quality of life for urban blacks and guidelines and priorities for research thereof. Appendices include basic social, economic and demographic characteristics of the black rural residents in the four states considered, project information, an evaluation of the conference by participants, and a bibliography. These conference proceedings are separated into three areas: (1) presentations by individuals who have played important roles in desegregation; (2) presentations on contemporary issues; and (3) the continuing challenge of providing equal educational opportunity to all. Among the topics included in the first section are the social and legal history building up to Brown v. Board of Education case, the implications of Brown, and Delaware's contribution to Brown. Issues such as busing, the continuing validity of integration as a predominant goal in the search for quality education, bilingual education, the emerging meaning of equal educational opportunity, Chicano education, and outlooks for the future are included in the second section. Another aspect of the Brown decision and the civil rights movement, the decision's relevance to white Americans, and the need for racial harmony are discussed in the third section. (AM)

This study evaluates the effects of busing on the subsequent achievement performance of bused black students. Differences in achievement gains or losses are hypothesized as being both a function of bused students attitudes toward busing and desegregation and of the interracial climate of acceptance in the receiving schools. Findings from data gathered by various statistical analyses indicate that the achievement performance of bused black students after the two year period of busing is significantly lower than that of the non-bused black students. In two years, bused black students are said to have advanced an average of only one month in grade placement. School interracial climate and student attitudes are considered to account for the significantly lower achievement performance of the bused students. The major conclusion of this study is that mandatory busing to desegregate schools in communities with great resistance to busing may serve to weaken the achievement performance of the bused minority student. Five hundred and twenty six journal articles, monographs, books and reports dating from 1970 to 1974 comprise this bibliography on issues relating to and attempted solutions of the health problems of minority urban youth. Documents are classified under the following headings: health problems and behavior of ethnic and racial minority groups, health problems related to growth and development, health and environment, learning disabilities, school and community health delivery systems, services and policies, school and community health care personnel, educating health consumers, physical fitness, and recreation and health. The following observations are made: (1) societal health problems can often be identified early in a person's life; (2) school is a critical factor and force in prevention of and treatment of health problems; (3) school personnel are not adequately trained to deal with health problems, and health workers in the community are not aware of health problems and programs in the schools; and, (4) ethnic minority children are most vulnerable to health problems and least likely to receive remedial services. **Descriptors**—Academic Achievement, Decision Making, Decision Making Skills, Individual Power, \*Locus of Control, \*Negro Youth, Pattern Recognition, Personality, \*Problem Solving, Psychological Characteristics, Reinforcement, Self Concept, \*Self Control, Sex Differences, \*Visual Perception

Aspects of problem-solving measured here are delay of gratification, field-dependence independence, and the relection-impulsivity dimension. The following hypotheses are proposed (1) Those subjects who score high on externality will not delay gratification as those who score low, but they will score lower on measures on field-independence than those who score low, they will respond more quickly on measures of reflection and impulsivity than those who score low, and they will commit more errors on this measure than those who score low. (2) There will be no relation between I.Q. scores and degree of externality on the locus of control measures. (3) Significant sex differences will be found on the measure of externality. Findings indicated no significant relation between the locus of control construct and measured aspects of problem-solving abilities. Significant intercorrelations between the dependent variables are found. The data did not indicate significant sex differences. Future research on the locus of control construct is recommended, especially, a specification of what areas of cognitive activities it influences for black youngsters. (Author/AM)

Descriptors—Classroom Observation Techniques, Cognitive Development, Individual Development, Individual Differences, Infancy, \*Infant Behavior, \*Interaction Process Analysis, Low Income, \*Mothers, \*Parent Child Relationship, Parent Role, \*Performance Factors, Psychological Studies, Success Factors

The focus of the study reported here is on two issues: whether the two most elaborate systems of natural observation, that is, those developed by Escalona and Watts could be applied to mother-child interaction recorded in a teaching situation; and whether there are relationships between maternal-child behavior so observed, and a more extended definition of competence than those originally applied by the various independent investigators. This study, therefore, is considered to have used elements of the natural observation measures and applied them to the videotape from the Instructional Strategies in Infant Stimulation (ISIS) project to further examine the social roots of competency. The sample consisted of 53 families with 22 boys and 31 girls who participated in the ISIS project. They were low income families residing in or near Gainesville, Florida. It is held that, generally, the project demonstrated that the use of observation systems developed originally for naturalistic observation in the home is functional for the analysis of videotapes of structured teaching situations. Further, it is asserted that the mix of theoretical orientations contributes to the richness of this understanding of the meaning of the social transactions between babies and mothers. The project is seen as having demonstrated that within a social class there are variances in maternal-baby behavior which influence infant performance. (Author/JM)

**Identifiers—Elementary Secondary Education Act Title VIII, ESEA Title VIII, Kentucky (Louisville), Kentucky (Paducah)**

The major objectives of the projects reported are to reduce dropouts, to decrease suspensions, to increase attendance rate, to increase reading and math achievement, to decrease disciplinary referrals, and to improve self-concept. Three project components are instructional, including personalized instruction in English, mathematics, social studies, and reading; staff development, including curriculum development and human relations training; and student services, including counseling, psychological-physical needs, home visitation, and parental involvement. Findings indicated a 34.4 percent reduction in the dropout rate over a five-year period for Paducah and 16.9 percent at Shawnee for a three-year period. Suspensions are found to be reduced to an acceptable level. Achievement gains in reading and math at Shawnee are seen to be significantly higher in 1973-74. At Paducah, student self-concept is considered to have improved throughout the five-year period, with the exception of 1973-74 at the junior high in Paducah. The document includes abstract, summary, context, program, overall objectives, components I-III, and appendices. (Author/AM)

This report summarizes the data about minority group scientists and engineers obtained as part of a national survey of scientific and engineering personnel in 1972. Information pertaining to minority group college students enrolled in engineering is also discussed briefly. Data presented on overall distribution patterns indicate that persons of Oriental descent have the highest concentration of scientists and engineers. The distribution of all scientists and engineers among regions of the country are seen to correspond to the distribution of the total population. The age distributions of minority group engineers are found to reflect past lack of opportunities for entry into the field, the median age for all minorities being five years less than the white median age of 42. Age distributions of scientists show less differences. The levels of educational attainment among the different racial groups of scientists and engineers vary, with those of Oriental descent indicating more education than either members of other minorities or whites. The key relationship between field of study and professional identity relationship is considered to be the level of degree earned rather than the racial characteristics of the workers. (Author/AM)

Identifiers—National Educational Opportunities Act 1975

This document contains the components of the National Educational Opportunities Act of 1975.

Among the purposes of this Act are the provision for a viable mechanism for States and their local educational systems to implement the national policy on equal educational opportunity, the improvement of results achieved by elementary and secondary education throughout the nation, the facilitation of the reduction in the concentration of children from minority groups and low-income families in certain schools, including prevention of resegregation after desegregation has been achieved, and the reduction and elimination of any educational ill-effects resulting from the concentration of children from minority groups and low-income families in schools where such concentrations are found to exist. Title II provides the guidelines to be followed by State equal educational opportunities plans, and Title III contains such items as the general provisions and definitions for terms such as minority students, low-income families, local educational agencies, desegregation, and basic supportive services. **The Isolated Appalachian Black Community.**

Pub Date Aug 75

Note—17p.; Paper presented at the Annual Meeting of the Rural Sociological Society (San Francisco, California, August 1975)

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

Descriptors—\*Black Community, Community Characteristics, Community Problems, Community Study, Cultural Factors, \*Depressed Areas (Geographic), Ethnic Groups, Ethnic Relations, Group Structure, Intergroup Relations, Minority Groups, Negro Attitudes, \*Negro Culture, Negro Role, Role Perception, Social Differences, Social Environment, \*Southern Community

Identifiers—\*Appalachia

This paper investigates the isolation of the local black community within the social/cultural perspective. A profile of the community is given in terms of data collected from personal and family interviews. Personal interviews assessed how the Appalachian black viewed his group. Among the 13 variables studied are: trustworthiness, religion, work ethic, intragroup cooperation, discrimination, drinking problems, and educational values. The family interviews inquire as to the religion, education, marital status, occupation, family size, length of residence, type of dwelling, number of vehicles owned, nature of family relations, and income level of families. The blacks are considered to share, to a great extent, the Appalachian lifestyle of advocated abstinence, strong religious, community, and family ties, as well as the contradiction of heavy alcohol consumption among adult males. While sharing in similarities, whites, Cherokees, and blacks of Appalachia are seen to have little interaction with each other. All three groups are found to project negative images to the valley whites and to outsiders. The paper concludes that the black community is not an isolated phenomenon but part of a larger cultural situation that must change in order for the black community to change. (Author/AM)

**Several Curriculum Variables in Inner City Education.**

Spons Agency—Protestant School Board of Greater Montreal (Ontario).

Pub Date Jun 75

Note—20p.; Paper presented at the Annual Meeting of the Canadian Educational Research Association (Edmonton, Alberta, June 1975)

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

Descriptors—Class Size, \*Curriculum Development, Curriculum Planning, \*Curriculum Problems, \*Inner City, Lower Class Students, Minority Group Children, Minority Group Teachers, Principals, Public School Teachers, School Personnel, Student Teacher Ratio, Teacher Characteristics, Teacher Improvement, Teaching Experience, \*Urban Education, Urban Schools

Identifiers—\*Quebec (Montreal)

This paper discusses the influence of class size and school personnel on the development and implementation of the curriculum of 10 inner city schools in Montreal, Quebec. Information is based on interview data, personnel records, and responses to a questionnaire. Results indicate that while teacher-pupil ratios in inner city schools are

slightly less than in non-inner city schools, actual class size is not significantly less. Principals and teachers in inner city schools are found to have less teaching experience and greater staff turnover than those in middle class schools. Results are discussed with reference to the educational implications of teacher experience, satisfaction, and stability on the implementation of the curriculum. A selectively screened and well prepared staff is suggested to be an essential component for curriculum development. An identification of pupils' needs and the establishment of educational priorities to adapt the curriculum to reflect these priorities is stressed, along with improvement in teacher education programs and inservice training for teachers and administrators in inner city schools. Hope, John, III, Ed.

Minorities and Women as Government Contractors.

Commission on Civil Rights, Washington, D.C.

Pub Date May 75

Note—206p.

EDRS Price MF-\$0.76 HC-\$10.78 Plus Postage

Descriptors—Administrative Agencies, \*Administrative Policy, Affirmative Action, \*Agency Role, Budgeting, \*Civil Rights, Contracts, Expenditures, \*Federal Government, Federal Programs, Minority Groups, National Surveys, Program Budgeting, \*Purchasing, Resource Allocations, Working Women

The stated objectives of the study reported here were to determine the answers to the following questions: what Federal, State and local programs provide contracting opportunities for minorities and women equal to those provided to nonminority males; if not, what the barriers to their full participation are; to what extent special State or local contracting programs have been established to facilitate contracting with firms owned by minorities and women; whether distinct

organizational mechanisms have been established to implement such special contracting programs, and if so, whether such mechanisms are adequately equipped to carry out their task; whether goals have been established for such programs and are these programs achieving their goals; whether the type and size of contracts being awarded through the special programs aid the development of the firms they are designed to assist; whether there is an adequate flow of information to minorities and women regarding Federal, State, and local contracting opportunities; whether unique problems are encountered by minority and female-owned firms supplying goods and services to government agencies; and, whether the government's purchasing power is being effectively used to aid the development of firms owned by minorities and women. Data on Federal contracting programs were gathered from responses to a questionnaire sent to 10 Federal agencies and two offices responsible for administering Indian programs. (Author/JM)

## **SPECIAL ANNOUNCEMENTS**

### **NIE PRICES FOR MICROFICHE (MF) AND PAPER COPY (HC)**

Please consult next page of this Index, **HOW TO ORDER ERIC DOCUMENTS**, for the latest prices and ordering information from the:

ERIC Document Reproduction Service  
P.O. Box 190, Arlington, Virginia 22210

Prices are subject to change. Please refer to the most recent issue of RIE for current ordering information.

---

### **How to Submit Documents to ERIC**

If you have documents or reports which you would like to have considered for announcement in **Resources in Education (RIE)**, you should send clear, legible copies (in duplicate, if possible) to the following location:

Educational Resources Information Center (ERIC), National Institute of Education, Washington, D.C. 20208.

Should the documents be copyrighted, it would be helpful if you could include a letter giving ERIC permission to reproduce in Hard Copy or Microfiche, or Microfiche only. If the latter is selected, and there is a source of obtaining the original publication, please provide ordering and price information.

---

## Introduction

**Resources in Education** is prepared monthly by the Educational Resources Information Center (ERIC) to make possible the early identification and acquisition of reports of interest to the educational community. ERIC is a nationwide information network for acquiring, selecting, abstracting, indexing, storing, retrieving, and disseminating the most significant and timely education-related reports. It consists of a coordinating staff in Washington, D.C. and 16 clearinghouses located at universities or with professional organizations across the country. These clearinghouses, each responsible for a particular educational area, are an integral part of the ERIC system. The clearinghouses are listed on the inside back cover.

All the documents cited in the Document Résumé Section of the journal, except as noted, are available from the ERIC Document Reproduction Service. Availability and prices of document collections are to be found on the How To Order ERIC Document Reproductions page.

	Women's opportunities for employment will be directly related to their level of skill and experience but also to the labor market demands through the remainder of the decade. The number of workers needed for all major occupational categories is expected to increase by about one-fifth between 1970 and 1980, but the growth rate will vary by occupational group. Professional and technical workers are expected to have the highest predicted rate (39 percent), followed by service workers (35 percent), clerical workers (26 percent), sales workers (24 percent), craftsmen and foremen (20 percent), managers and administrators (15 percent), and operatives (11 percent). This publication contains a brief discussion and employment information concerning occupations for professional and technical workers, managers and administrators, skilled trades, sales workers, clerical workers, and service workers. In order for women to take advantage of increased labor market demands, employer attitudes toward working women need to change and women must: (1) receive better career planning and counseling, (2) change their career aspirations, and (3) fully utilize the sources of legal protection and assistance which are available to them. (SB)			Informative Abstract.

Descriptors—Behavioral Science Research, Educational Methods, Educational Principles, \*Educational Research, Educational Strategies, Instructional Media, \*Learning Theories, Literature Reviews, \*Teaching Methods, Teaching Techniques, \*Technical Education, \*Vocational Education

The manual provides vocational and technical teachers with a review of the principles of learning which have application to their subject fields. Organized into three sections, the booklet offers: (1) a selected review of the literature related to how learning theory is applied to instruction; (2) principles of learning that have been identified as having application to classroom teaching, subdivided into those related to motivation and those related to instructional methods and teaching strategies; and (3) principles of learning related to instructional media, conditions, and materials. The reader can find the lesson component in which he is interested (attention, presenting stimuli, promoting retention, etc.) listed in the table of contents and learn what research has to say about the area of his concern on the page cited. Identifiers—\*Gerontology

The development of trained manpower in gerontology for the delivery of health and social services to older adults in Pennsylvania is the focus of an ongoing adult education program at The Pennsylvania State University. This paper discusses the theoretical and methodological bases for this program, with emphasis on the importance of linking community-based education and training programs with the appropriate academic base, to provide the conceptual framework and evaluative expertise required for a good program. Assumptions and observations about this process led to theoretical and methodological formulations for adult education in general, with specific examples provided from the current gerontology project. Descriptors—Adult Education, \*Consortia, Educational Needs, \*Educational Planning, \*Geriatrics, Higher Education, \*Interinstitutional Cooperation, Program Development, State Programs, Workshops

Identifiers—\*Gerontology

In response to growing needs of older citizens, the University of Pennsylvania and the Office of Aging of the Pennsylvania Department of Public Welfare developed a three-year gerontological program. A series of faculty seminars was planned as part of the first-year program, after an initial survey of all Pennsylvania institutions of higher education indicated an interest in a gerontological seminar series. The first two-day workshop was designed to introduce participants to general concepts in gerontology and to stimulate program planning. An Opinion About People scale was developed and administered prior to the first workshop to determine participant background and set the level of presentations. Participant evaluation of the first workshop reflected a two- and four-year institutional dichotomization of interests, which was taken into consideration in planning the second workshop. Evaluation of the second session

showed an increase in the level of interaction among participants. The concluding workshop focused on curriculum development, with participants organized into small role-playing groups for problem-solving at hypothetical institutions. A core of interested and knowledgeable individuals, representing the needs, resources, educational philosophies, and institutions in the State was identified for second-year planning in program development for gerontology. Occupational Opportunities in Nebraska: 1975 Report.

Nebraska Occupational Needs Research Coordinating Unit, Lincoln.; Nebraska State Dept. of Education, Lincoln. Div. of Vocational Education.

Pub Date Jun 75

Note—57p.

EDRS Price MF-\$0.76 HC-\$3.32 Plus Postage

Descriptors—Educational Programs, \*Employment Projections, Employment Trends, \*Occupational Clusters, Occupations, \*State Surveys, Statistical Analysis, \*Statistical Surveys, \*Tables (Data), Vocational Education

Identifiers—\*Nebraska

The eighth annual study of occupational opportunities in Nebraska is based on a 5 percent random sample of employers in each of the six Technical Community College Areas in the State. A computerized straight line projection technique was used to project total employment, need over the next 12 months, reason for need, and need over the next two years. Table 1 summarizes total projected employment and future need by occupational category. Tables 2 through 11 provide total projected employment figures at the State level and list future need and appropriate Vocational Instructional Training Programs for each occupation within the 10 occupational categories for each of the Technical Community College Areas. Tables 12 through 21 provide total projected employment figures for the State and projected need from expansion or turnover over the next 12 months for the broad occupational divisions within the 10 occupational categories for each of the Technical Community College Areas. Tables 22 through 29 project employment figures over the next 12 months and the next two years for the seven major instructional areas of vocational education. Table 30 similarly projects employment figures for all other occupations not covered by Vocational Instructional Training Programs or Dictionary of Occupational Title numbers. (JR)

Career Guidance Counseling Placement Guide.

Idaho State Dept. of Education, Boise.

Pub Date Sep 75

Note—35p.

EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage

Descriptors—\*Career Awareness, \*Career Education, Educational Counseling, Educational Guidance, Elementary Secondary Education, \*Occupational Guidance, Program Administration, \*Program Guides

An effective program to aid the student in making the transition from school to the world of work requires a coordinated guidance effort, including the administrator, counselor, and teacher. The K-12 guide will assist educators in coordinating aspects of career guidance, counseling, and placement in the student's career development and preparation for life. The goals and objectives of career guidance are self awareness—self identity, education awareness—educational identity, career awareness—career identity, economic awareness—economic understanding, decision making—career decisions, beginning competency—employment skills, employability skills—career placement, attitudes and appreciation—self/social fulfillment. The process of career guidance relates to self awareness, decision making skills, environmental understanding, and relating to the world of work. The six major components of a career guidance program are: individual data system, information system, career assessment and planning process, dissemination system, facilitation of community experiences, and placement and follow-through. Guidance counselors, teachers (including special education teachers), administrators, parents, students, employers, and other community members all have roles and responsibilities in career guidance. Evaluation must involve both career education programs and also the school's ability to meet the needs of the students. A bibliography is included. (Author/EC)

Descriptors—\*Achievement Rating, Career Awareness, \*Career Education, \*Comparative Analysis, \*Elementary Secondary Education, Evaluation Methods, \*Program Evaluation, Vocational Education

Identifiers—Florida (Orange County)

The purpose of the project was to plan, implement, and evaluate a comprehensive vocational education program for career development in Grades K-12, in one metropolitan school district in Florida. Data for the evaluation of the program were collected from students, teachers, counselors, and administrators. The hypotheses for guiding the evaluation of students in career education programs are listed. Achievement in elementary schools, junior high schools, and high schools in career education instruction were measured using specially constructed instruments, and comparison made between a random selection of students in career education schools and in traditional schools. The design included pre and post observations. On the basis of the results it was concluded that achievement in the elementary schools and junior high schools showed no significant difference from the comparison group in regard to scores on the tests designed to measure knowledge about careers. However, high school students in the career group learned more entry level job skills than the comparison students but there was no difference between the groups in relation to scores on a multiple-choice type instrument designed to measure knowledge about careers. A selected bibliography, list of consultants, instruments, and forms used in the study are appended. (Author/EC)

Descriptors—\*Administrator Guides, \*Curriculum Design, Educational Assessment, \*Medical Record Technicians, \*Models, Program Development, Program Evaluation, Program Planning, Systems Approach

The curriculum management guide serves as an aid to medical record teachers and other medical record educators. It is designed to provide them with a useful tool to improve student performances by improved administration and management of programs. The guide documents one possible systematic approach to professional and vocational curriculum management. A brief description is given on the original intent, investigation process, expert opinions, and the need for a detailed management model. A lengthy discussion (81 pages) on the curriculum management design presents elements, tables, materials, checklists, and recommendations on the four phases of school/curriculum management: assessment, planning, implementation, and evaluation. In addition, alternative educational approaches to help professional and technical educators in various aspects of curriculum design are included. A work-flow diagram of the four phases of the curriculum management design is included. Correspondence related to the study and a manpower forecasting form are appended. (Author/EC)

Descriptors—\*Equal Opportunities (Jobs), \*Equivalency Tests, \*Federal Legislation, Health Occupations, \*Medical Record Technicians, Occupational Mobility, Performance Criteria, \*Professional Associations, Role Perception, Standards

In order to be able to comply, and to be able to document their compliance, with federal legislation regarding health occupations education and discriminatory practices, the American Medical Record Association conducted a study to see if a data base could be built to validate proficiency tests for medical personnel. The report was prepared to document the structure, processes, and outcomes of the study, the Role and Functions Project. Six major concerns were: patient care standards, acceptability to health care field, integrity of medical record profession, occupational levels for proficiency tests, relevancy to job performance, and career mobility. The report discusses purpose, methodology, results, conclusions, medical record models, and recommendations. It contains 45 conclusions, three analytic models, and 15 action recommendations. About two-thirds of the report is devoted to appendixes: policies for the development of credentialing mechanisms for health personnel; a 20-page bibliography; reports on State Medical Record Associations' Tasks 1 and 2; final report on affect measurement of medical record personnel; and formative evaluation report for roles, functions, training, and proficiency tests for medical record personnel project. Occupations: Military—Civilian Occupational Source Book.

Armed Forces Vocational Testing Group, Universal City, Tex.

Report No—DOD-1304.12Y

Pub Date Jul 75

Note—318p.

EDRS Price MF-\$0.76 HC-\$15.86 Plus Postage

Descriptors—Cluster Grouping, \*Comparative Analysis, \*Employment Qualifications, Enlisted Men, \*Information Sources, Jobs, \*Military Personnel, Military Service, Occupational Clusters, \*Occupational Information

Identifiers—Air Force, Army, Coast Guard, Marine Corps, Navy

Information on enlisted military occupations is offered in the source book to arrive at a comprehensive statement of job tasks in the military service and their similarities to jobs in civilian life. Basic information about five areas of the U.S. military services (Army, Navy, Air Force, Marine Corps, and Coast Guard) focuses on their military enlistment, training, promotion, assignment, advanced education programs, and military reserve components. A section is devoted to the structure and use of the source book, examining the classification (specialty/rating) system of the military service based on the occupational cluster concept and the Dictionary of Occupational Titles (DOT). A significant section (256 pages) of the source book focuses on job statements for military service occupations which are equated to corresponding civilian occupations according to 10 categories: (1) professional, technical, and managerial occupations; (2) clerical and sales occupations; (3) service occupations; (4) farming, fishery, forestry, and related occupations; (5) processing occupations; (6) machine trades occupations; (7) bench work occupations; (8) structural work occupations; (9) miscellaneous occupations; and (10) military unique occupations (no civilian counterpart). References and a cross-indexed list of civilian titles with their corresponding DOT code are included. (EC)

Master Planning for Postsecondary Education in Utah. Vocational-Technical Education Task Force Report and Recommendations.

Utah State Board of Higher Education, Salt Lake City.

Pub Date Jun 75

Note—57p.; Some chart material may not reproduce due to smallness of type

EDRS Price MF-\$0.76 HC-\$3.32 Plus Postage

Descriptors—Charts, Curriculum, Educational Planning, Facilities, Faculty, Financial Support, Institutional Role, \*Master Plans, \*Post Secondary Education, \*State Programs, Student Characteristics, \*Technical Education, \*Vocational Education

Identifiers—\*Utah

Representing the first Utah postsecondary vocational master plan, the report focuses on: (1) program flexibility, (2) designing new delivery systems, (3) provision of adequate facilities, and (4) securing financial support to meet changing student, State, and industrial needs. Following an introductory section, Section 2 summarizes the status of Utah students in regard to abilities, student college choices, programing scope, State manpower needs, and postsecondary enrollment patterns. Section 3 reviews the general governance of vocational-technical education in regard to curriculum, programs, and role assignments throughout the State. Section 4 further clarifies curriculum and roles as related to State manpower demands, program costs, program viability, Office of Education code designations, and manpower findings. Section 5 is directed toward vocational-technical faculty in higher education and discusses institutional and faculty flexibility, upgrading of faculty competencies, and articulation. The concluding section reviews enrollment and financial trends, funding for new programs, skills centers, new facilities planned, and energy and other resource development. Recommendations are stated for each section with target dates for the implementation of individual recommendations. Appendixes include lists of less than baccalaureate degree vocational-technical programs and program groupings according to Office of Education code designations. (EA)

What's In A Name? Elkhart Career Education Planning.

Elkhart Area Career Center, Ind.

Spons Agency—Indiana State Board of Vocational Education, Indianapolis.

Pub Date 4 Apr 75

Note—31p.

EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage

Descriptors—\*Career Education, \*City Wide Programs, Educational Development, Educational Programs, \*Elementary Secondary Education, Off Campus Facilities, \*Program Descriptions, Supplementary Educational Centers

Identifiers—Indiana (Elkhart)

The Elkhart Career Education Planning Program (ELCEP), a K-12 component of Indiana's career education effort, and its first three years of operation are described in the document. A general discussion of the definition of career education, program goals, administration, funding, and facilities provides background material on the program. Several projects are discussed, including: a model school; the development of a graduate course in the techniques of career education, in conjunction with Indiana University at South Bend; the screening of commercial products for applicability to the program; the development of the ELCEP library and mobile unit; recruitment of teachers for career education courses; and, consultation services and information on career education for the Elkhart school district. Administrative offices are housed at the Elkhart Area Career Center, and facilities enable field trips, workshops, the graduate course, and the resource library to be available to community schools. School projects developed by teachers in conjunction with ELCEP are discussed, and future goals cited for career education development. Suggestions for interviewing a resource person and a field trip check list are included. (LH)

**Home Economics Education Guide for Instruction Preparatory to Entering Food Service Occupations.**

Virginia State Dept. of Education, Richmond.  
Div. of Vocational Education.

Pub Date [70]

Note—46p.

**EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage**

**Descriptors**—Bibliographies, \*Course Descriptions, Course Objectives, \*Curriculum Guides, Educational Objectives, Evaluation Methods, Food Service, Food Service Industry, \*Food Service Occupations, Foods Instruction, Grade 11, Grade 12, Job Skills, \*Job Training, Learning Activities, \*Occupational Home Economics, Secondary Education, Vocational Education

The teacher directed home economics education guide is planned to prepare high school students for entrance into food service occupations upon completion of high school. Course length includes two periods daily from one to three years, with on-the-job training recommended. It is recommended that students complete one or two years of a homemaking course before beginning occupational training, and that they be in grades 11 or 12. Class size should not exceed 12 to 15 students. Units include: (1) nature and scope of food services—the employment picture—essential elements; (2) desirable personal qualities for job success; (3) safe food handling—essential health practices, sanitation, and storage of foods; (4) care and use of equipment and safety requirements; (5) basic skills in management of work and in preparation and service of food; and (6) waitress training. Each unit includes a statement of objectives, and a brief outline of content, related activities, and experiences. Also included are sections on teaching the course, criteria for judging trainee competence, job placement information and opportunities, and grades for developing surveys to explore this area. A bibliography includes titles of 60 books, 4 pamphlets, 10 films, and 11 magazines. (LH)

**Descriptors**—Educational Programs, Federal Legislation, \*Health Occupations Education, Health Personnel, \*Health Services, Internship Programs, Medical Education, Medical Services, \*Paramedical Occupations, \*Program Descriptions, \*Program Planning, Subprofessional

Through Medicaid, the Health Maintenance Organization Act (HMO), and Prepaid Health Programs (PHP) approaches were established whereby the government can help alleviate the medical problems of the needy. A program to educate and train students in California in the philosophy, administration, and development of PHP was developed in response to difficulties in the implementation of the legislation. The six-month program combines classroom training in specific skills with internship. Program activities described include student recruitment and selection, and the training program itself, which consists of a curriculum covering medical billing, statistical reporting, marketing, accounting, PHP/HMO law, medical terminology, principles of PHP/HMO management, and communications. An assessment of the curriculum showed a positive response from the students but an attrition rate attributed to several factors was detected. Other factors reported on are class composition, guidance and counseling, job placement programs, public acceptance, and student motivation. A high success factor in terms of realization

of objectives was found for students who finished the program. Conclusions and recommendations about the program are given. Appended materials include: details of the California State plan for nine-point Institute for Medical Service; student selection, orientation, and evaluation materials; curriculum outline; and a list of texts and materials. The final report outlines a statewide project which provided basic emergency technicians (EMT) training. The use of videotaped instruction, development of testing materials, and the development of cooperative voluntary structures on the State and community level are discussed. Objectives emphasize: (1) uniform training throughout the State, (2) training program continuation with the establishment of a continuous EMT program within the State's educational system, and (3) support and involvement of voluntary and government agencies concerned with emergency services. The implementation of the project is presented in outline form and includes a training needs survey, instructional materials bibliography, discussion of the 10 district programs in terms of counties included, type of instruction, number and success rate of students, and in-hospital training; videotaped instruction; test development; promotion; and the continuation of the training programs and materials developed for them. Summary and evaluation sections are positive and a list of six recommendations for replication in other States is provided. Appended materials make up the bulk of the document and include: South Carolina Ambulance Attendants Law, program related documents, a coordinator's guide for videotape instruction in relation to learning effectiveness, and sample publicity. **Descriptors**—Curriculum Guides, Economic Education, Employment Qualifications, \*Industrial Education, Learning Activities, Lesson Plans, Money Management, Secondary Education, \*Teaching Guides, Teaching Methods, \*Unit Plan, Work Attitudes

In the development of the guide, attention was centered on fostering the behavioral objectives delineated for the generally related study aspect of Industrial Cooperative Training (ICT). It has been generally accepted by coordinators and supervisors of ICT programs in Virginia that approximately half of the class time should be devoted to teaching lessons in the generally related instructional areas with the remainder of the time to be spent by the student in learning technical information related to his specific occupational area. The sample lesson plans compiled in the publication should assist the ICT coordinator in developing instructional units for the generally related phase of the ICT One program. It is emphasized that the guide is not designed as a course to be rigidly followed. Ten units including two to six lessons each are outlined: introduction to the ICT program; pre-employment information; employer-employee relations; techniques of learning; on-the-job communications; income tax; you and the American economy; money management and banking; laws, contracts, and you; and safety. Sample lessons are described in terms of objectives, content, and methods of teaching. Transparency masters, handouts, and lists of resource materials are included for most lessons. (Author/EC)

A selection of 26 operational linkage programs are described in the supplemental document, providing career education practitioners with examples of program development and operation in the area of school-work relationships. The programs are grouped under four categories and in terms of their relationship between education and work: (1) communication, programs that open avenues of information exchange; (2) participation, programs that facilitate recommendation and advice exchanges; (3) substitution, programs that periodically replace school setting or teacher with workplace and supervisor; and (4) integration, programs that aim toward making education and work a single process. Individual program discussions include title, contact persons, location, specific problems addressed, intent, specific program description, educational level and type, history, organizations involved, funding, and impact. An index is provided which cross references each program by its educational level and the service it primarily provides, including: curriculum, evaluation, guidance, manpower utilization, and planning. **Descriptors**—Behavioral Objectives, Career Awareness, \*Career Education, Career Exploration, Counseling Programs, Course Content, \*Elementary Secondary Education, Evaluation Methods, Guidance Programs, Intermediate Grades, Learning Activities, \*Program Descriptions, \*Program Development, \*Program Evaluation, Secondary Education, Student Evaluation

Detailing the development of a sequential career education program for grades 4-12, the report describes the following program components and the techniques used to accomplish their objectives: guidance and counseling model program (grades 6-12), career awareness at the elementary level (grades 4 and 5), career orientation and exploratory experiences at the middle school level (grades 6-8), and the high school job preparation program. Third party evaluators from Teachers College, Columbia University concluded that the project achieved its basic goals and was generally enthusiastically accepted. Their evaluation included a report of the degree of success obtained for behavioral objectives at the elementary and middle school levels, elementary student evaluations, and results of the Career Development Inventory given at the high school. Eighteen detailed program recommendations are listed. A four-page reference list and a glossary are included. Appendixes (158 pages) contain: elementary and middle school goals, behavioral objectives and coordinated activities, a list of occupational cluster related activities, high school objectives, content of civics and experimental career guidance programs, conference and workshop schedules, the career development inventory, Columbia University's formative evaluation reports, reaction sheets from career education staff, career education brochure, and the research evaluation design. Designed primarily as a guide for teachers at the secondary level and in adult basic education, the book summarizes basic techniques for instructing students in how to read, emphasizing continuous informal diagnosis and adaptive teaching. Chapter titles include: Stages of Development, providing an overview of the basics of the reading process and how one moves from nonreader to reader status; Diagnosis, discussing proven techniques and instruments used to assess reading levels; Teaching Procedures—Stage 1, discussing teaching methods for each stage of the reading process; Stage 2—Reading to Learn, exploring a variety of ways students learn through their reading; Specialized Reading Skills, discussing reading experiences drawn from current study or related work materials through the systematic teaching of work study skills; and, Classroom Management, emphasizing individualized reading and instruction. A bibliography of 52 titles is presented and specimen copies of informal measures for assessing basic reading skills, including the Fry Readability Formula, and a reference list of instructional materials are appended. It is stated that teaching the untaught demands an ability to transform components of the developmental reading program into instructional methods and materials appropriate for learners of all ages and in a variety of situations. **Identifiers—**Business Law

The textbook is intended for use in college methods classes in business education and is a practical how-to-do-it guide containing many examples, illustrations, and techniques adapted from actual classroom observations and experience providing variety, socialization, discussion, and problem solving in the classroom. The text is based on the premise that classroom procedures utilized in teaching the basic business subjects differ considerably from those employed in teaching the skill subjects. Chapters cover: basic business subjects, psychology of learning, student motivation, individual differences, dramatization and visualizing teaching, concept development and problem solving, teacher planning, evaluation of learning and teaching effectiveness, general teaching methods, and specific teaching techniques. Each chapter concludes with questions, activities, and projects. The final chapter on specific teaching techniques and suggestions (133 pages) provides ideas for teaching eight basic business topics (American business system; money and banking; economic risks and insurance; money management; being a good consumer; savings and investments; effective use of credit; government, business, and labor) including various instructional aids (guide sheets; attitude inventories; ideas for introducing unit topics; student activities; sources of supplementary materials; and transparency masters, posters, and bulletin boards). The project was an empirical exploration to determine the scope of the learning capacity of marginal Army personnel (those with low scores on Army general ability and aptitude tests), to observe the longitudinal effects of long term, self-managed learning strategies, and to determine the proficiency levels that these men could reach as a result of their application of these strategies. The approach was to design an individualized instructional program to provide participants with the instructional skills and knowledge to manage their own training and educational growth. A 104-page section describes the operational model which utilized 12 interrelated learning concepts and teaching strategies to structure the program into three levels, each containing sub-levels (modules). Data were collected on the self-selected activities engaged in by the 24 participants and the proficiency levels they reached during their stay in the project. Considerable gains were reported in both areas for a majority of the participants. Recommendations for setting up a special program with similar objectives are listed. Appended materials (66 pages) include: a schematic breakdown of model operation (describes the process the participant works through in the project), individual participant scores and mini-case reports, and a correlation matrix. The supplementary curriculum guide is designed to assist elementary classroom teachers in presenting a career education program based on: recognition of student needs, integration of career oriented mini-courses into the curriculum, relation to job clusters, and development of guidance concepts and methods. Coordinated with CE 005 139, mini-courses cover the subject areas of arts and crafts, culinary arts, hand sewing, horticulture, lettering and layout, outdoor living, personal banking, photography, practical home repairs, and woodworking. A section for each of these subject areas provides: (1) a statement of the need of the child as related to the area; (2) a list of ways that the subject can be integrated into the science, language arts, social studies, and math curriculum at each grade level (K-6); (3) a chart relating the subject area to job clusters; (4) guidance concepts and suggested methodology (activities) listed by grade level; and (5) outlines for selected student activities in the subject area. A scope and sequence chart shows the subject areas and grade levels in relation to the counseling concepts. Also included is a two-page list of instructor and student references. (MS)

The document contains recommendations and section reports from the National Conference on Lifelong Education, which the Australian Association of Adult Education organized and held in Canberra on November 23-29, 1973. Aims of

the conference were to examine: (1) the present condition of Australian society as this bears on lifelong education, (2) the present provision of educational opportunity for adults, and (3) existing and expected needs for the development of facilities for lifelong education. Recommendations are categorized under headings of: General Orientation, Values, and Purposes; General Implications for Education; Qualifications for School Work; Shared Use of Total Community Learning Resources; Learning Consultants and Their Preparation; Teaching and Learning Media; Provision for Special Groups; Communication, Coordination, and Administration; Financial Aspects; and Areas for Inquiry. More than half of the document consists of the seven section reports on: Lifelong Education and Recreation; Technology, Media, and Lifelong Education; Lifelong Education and the Learning Process; Training and Retraining (Needs, Problems, and Strategies); Resource Utilization/Administrative and Financial Structure; Communities and Organizations; and Lifelong Education and Women. The curriculum materials for high school students presented in the guide have been classroom developed and tested; they are the result of a project to establish a comprehensive career education program in the Peshastin-Dryden School System, Cashmere, Washington. An introduction discusses program goals, and is supplemented by the National Standard Career Education Model Goal Statements and a job cluster emphasis chart. Unit titles include: Art, Biology, Business and Office, Career Education, Clubs and Organizations, Distributive Education, English, History, Home Economics, Humanities, Industrial Arts, Journalism, Library, Mathematics, Music, Photography, and Vocational Agriculture. Each unit is organized according to: title of sub-topic; grade level; subject area; estimated time involved; career education cluster; elements of career education; program, course, and instructional goals; behavioral objectives; learning activities; evaluation; resources; and comments. Each academic unit explores related career areas and hands-on learning activities are emphasized. A guidance and library section discuss resources developed in the program. Teacher directed material is appended and includes: career education questions and answers, an outlined presentation of program planning, teaching suggestions, teacher evaluation of 78 commercial materials (including information on source, title, type, level, approximate cost, and comments), and a bibliography. **Descriptors—**\*Career Education, Community Resources, \*Curriculum Development, Educational Objectives, \*Elementary Secondary Education, \*Evaluation Methods, Formative Evaluation, \*Program Evaluation, Questionnaires, Summative Evaluation, Test Results

The document presents an evaluation of the Cashmere, Peshastin-Dryden, Washington School District's project to establish a comprehensive K-12 career education program, with emphasis placed upon the formative and summative stages. Background information is provided in the following chapters: (1) Objects of Evaluation discusses the evaluation model and plan; (2) Specifications of the Program presents the program rationale and discusses curriculum listings for all program levels and the National Standard Career Education Model Goal Statements; (3) Formative Assessment, an evaluation of that which was done during a project's development, discusses: an interim evaluation report prepared at the project's mid-point, a presentation of two staff questionnaires, their results and appraisal with tables, an assessment of community involvement and information dissemination, and costs; (4) Summative Assessment, evaluating student attitudes and knowledge relative to the project's intent, discusses the establishment of a control group and testing results. Types of questions and instruments used are discussed, with the format roughly following grade level sequencing, and supplemental tables are provided. Conclusions regarding the program are arranged under formative judgements and judgements of worth. It is stated that the program was exemplary, well managed, and well staffed. (LH)

Twenty-two field-tested instructional units were developed for use in adult and young farmer education by 20 specially trained agriculture teachers in Ohio. The resource units were developed in the following agriculture areas of instruction: corn and soybean production, agriculture mechanics, swine production, farm management, and horticulture. Each unit is presented with topic outlines, illustrations, and descriptions. Subjects discussed within each unit include the following areas: State situation, local situation, objectives, references, needed audiovisual equipment, interest approaches, questions to be answered, learning activities, to summarize (note to teacher), applications, and appended materials on content summary and instructional materials. The study to assess the status of elementary and secondary home economics programs in Massachusetts and to determine the inservice needs of the teachers also had the objectives of deter-

mining desirable types of inservice activities, determining desirable subject areas, gathering information on teacher education and experience, and sharing the findings with those responsible for planning inservice programs. Two questionnaires, one to collect information on programs and the other for teacher information, were developed and sent to all 1,403 home economics teachers in the state and to 731 schools. Responses from 426 schools and 956 teachers are analyzed separately in detail, with discussion of the information gathered from each section of the questionnaires. A general discussion section expands on the following: progress toward shorter courses by one-third of the schools; boys in courses in one-half of the schools; food and clothing areas as the major course content; lack of federal funding; need for more diversified programs; teacher interest in inservice dealing with nutrition, consumer education, family living, and special education students; desirable times for inservice; and reasons for not pursuing graduate study. A two-page bibliography and copies of the two questionnaires are also included. (MS)

Fourth in a series of yearbooks presenting an overview of industrial arts at the various levels of education, the yearbook clarifies the contribution of industrial arts at the elementary school level. Fifteen educators from industrial arts and related field have authored the 12 chapters of the yearbook. Chapter 1 (Mary-Margaret Scobey and Grace Graham) explores the effect of social needs and educational trends on curriculum development. Chapter 2 (Ardele Llewellyn and Violet Robinson) is specifically directed to developmental aspects of middle childhood. Technology: The Source, chapter 3 (H. G. Gilbert) sets a general direction for the comprehensive coverage of industry. Chapter 4 (Norma Heasley) provides coverage on various aspects of curriculum design. Contemporary programs (W. R. Miller) and environmental designs (Eberhard Thieme) are the topics for chapters 5 and 6. Chapter 7 (Gardner Boyd) discusses the role of industrial arts personnel, and chapter 8 (Franklin Ingram and Vito Pace) analyzes methodologies of teacher education. Historical reflections (Robert Hostetter) and philosophical positions (William Hoots, Jr.) are presented in chapters 9 and 10. Chapter 11 (W. A. Downs) includes a compilation of doctoral degree studies, master's studies, and non-degree research. The concluding chapter (Delmar Larsen) is a selected bibliography. (EA)

**Descriptors—**Community Health Services, \*Delivery Systems, Developed Nations, \*Educational Change, Educational Trends, Foreign Countries, \*Health Occupations Education, \*Health Services, \*International Organizations, Medical Education, Policy Formation, Post Secondary Education

The summary report focuses on postsecondary education for the health professions in the context of evolving health care systems within Organizations for Economic Cooperation and

Development (OECD) member countries. An assessment of health care practices in these countries led to the conclusions and recommendations presented in part one of the report. There are trends toward: (1) individualized community level health care and prevention (primary health care), (2) greater cost-effectiveness, and (3) educational reorganization. Recommendations deal with the need for national health policies, integration of health care and education, coordinated government action, research, continuing and recurrent education, and international efforts. The second section reviews present trends: the size, growth rates, and complexity of health care and education of the health professions in member countries. New demands on health care systems by consumers, professionals, and government officials for improved access, quality, cost control, and extension are outlined. Response to these demands is reported as new health care policies, (especially primary care) and policy implementing mechanisms. The educational responses to trends in health care systems are detailed with the conclusion that innovative approaches are more abundant than actions being taken on them. The report concludes with a five-page bibliography. (Author/MS)

Descriptors—\*Advanced Placement Programs, \*Curriculum Development, Educational Programs, Health Occupations, \*Health Occupations Education, Health Personnel, \*Individualized Instruction, \*Practical Nurses, Program Evaluation, Questionnaires, Testing

The purpose of the project was to develop evaluation, guidance, and tutorial services to maximize the previous health related experience and education of people and to enable them to be placed, with advanced standing, into an existing practical nursing program. Because each student comes into a program with certain knowledge and abilities, Project Opportunity used the module approach to evaluate and identify areas to be learned. The individualized learning modules were based on task analysis and included pre- and posttesting, behavioral objectives, learning strategies, and self-evaluation. The results and accomplishments of the project included the development of challenge examinations, practical nursing modules, core curriculum, a secondary health careers program, surgical technician program, and the Dakota County pilot project. Project evaluations were based on: student performance, evaluation, and comments; and faculty participation and comments. The Dakota County evaluation and evaluations of the core curriculum and the secondary health careers program are also presented. Conclusions, implications, and recommendations of the project are discussed. A project materials evaluation questionnaire and its results are included. A list of the practical nursing modules, core curriculum requirements, and an outline of the health careers curriculum are appended. (Author/EC)

Descriptors—\*Demand Occupations, \*Employment Projections, Industry, \*Labor Market, Matrices

Identifiers—Pennsylvania

The objective of the project was to generate historical estimates and projections of employment demand by industry and occupation (industry-occupation matrices) for the state of Pennsylvania and 12 metropolitan labor market areas in the state. The methodology is discussed in two sections. The first section is concerned with the methodology used in arriving at historical estimates and projections of the industry-occupation matrices. The second section presents procedures used in computing annual change factors for each occupation in each area, for the period 1970-80, given the benchmark years data for 1970, 1975, and 1980. A list of 88 industries is appended. (Author/EC)

Instructional Guide for Cosmetology.

Virginia Polytechnic Inst. and State Univ., Blacksburg. Dept. of Education.; Virginia State Dept. of Education, Richmond. Div. of Vocational Education.

Pub Date Oct 72

Note—476p.

EDRS Price MF-\$0.76 HC-\$24.75 Plus Postage

Descriptors—\*Cosmetology, \*Curriculum Guides, Educational Objectives, Grade 10, Grade 11, Grade 12, Instructional Aids, Instructional Materials, Learning Activities, \*Secondary Education, \*Unit Plan, \*Vocational Education. Intended as a tool for cosmetology teachers in Virginia public and private schools, the document is an instructional guide which offers 12 units of study, arranged in a three year course. Materials covered help prepare students for licensure in the State of Virginia and the guide is designed to cover the 1,500 hours required to be spent in the cosmetology laboratory, learning manipulative skills of the profession. Materials are arranged alphabetically by unit, and in outline form, leaving teaching sequence and style up to the instructor. Cosmetology 1, 2, and 3 are taught in high school grades 10, 11, and 12 respectively, for three consecutive class periods per day. A summary course outline lists 12 areas of instruction, their individual percentage of total course time, and total suggested hours for each in the three individual years of study. Units cover: care of the hands and feet; care of the hair, skin and scalp; haircoloring; hair pieces; hair straightening; hair styling; image development; permanent waving; professional makeup; salon management; and, shampooing and colorless rinsing. Each unit includes a discussion of general concepts and objectives, teacher presentation, student activities, and teaching aids. (LH)

A collection of materials to aid cosmetology teachers in organizing and managing laboratory/classrooms is presented in the document. The materials may be adapted for use in a variety of situations and have been compiled by a group of cosmetology instructors. Materials are presented in two ways, with the first providing a discussion of topics which revolve around teaching techniques. Included are: planning importance; instructional methods; sources of teaching materials and their uses, which includes a short bibliography; keeping records; organization and management of cosmetology laboratory/classrooms; the relationship of student, patron, and the community; vocational education and personal counseling; and working with the disadvantaged, problem, and gifted student. The second type of material consists of examples of record keeping sheets and forms. Included are: student attendance and progress sheets; classroom schedules; student project assignment contracts; teacher lesson plans; inventory and purchase requisition forms; student

attitude evaluation sheets; application and registration forms from the Virginia State Board of Registered Professional Hairdressers; charts of cosmetology jobs within the educational field, beauty shops, and the cosmetic industry; and procedure check sheets and rating scales for individual skills. Descriptors—\*Career Education, \*Educational Television, Elementary School Teachers, \*In-service Teacher Education, \*Program Evaluation, Teacher Attitudes, \*Teacher Workshops. Identifiers—\*Bread and Butterflies, Iowa

The document presents a discussion and evaluation of the training workshop program developed by the Iowa Educational Broadcasting Network and the Iowa State Department of Public Instruction to help teachers incorporate the Bread and Butterflies television series on career development into fourth, fifth, and sixth grade curricula. The Bread and Butterflies series is described as a quality product with extensive training aids, including a comprehensive curriculum guide, individual program analysis, before-viewing readiness plan, program summaries, and suggestions for classroom discussion and activities. Workshop goals included informing teachers of the program and its content, incorporating it into existing curricula throughout Iowa, and fostering a positive teacher attitude. A one-day, in-service, training workshop was developed for 14 regions of Iowa. A group of teacher trainers selected by region from school systems throughout the State received the training and, in turn, provided in-service training to faculties in their respective school systems. Evaluation was made of the teacher training workshops, career development attitude of upper elementary teachers, and cost effectiveness. A detailed discussion of evaluation findings is presented, and tables and figures supplement the material. (LH)

Descriptors—Cost Effectiveness, Data Analysis, \*Data Collection, Educational Finance, \*Expenditure Per Student, \*Models, \*Program Costs, \*Research Tools, Secondary Education, Trade and Industrial Education, Vocational Education

The study was designed to develop a model for the collection and analysis of cost data for defining the cost per pupil per program per type of school (area vocational or comprehensive). An advisory committee of New Jersey State Department of Education personnel and vocational educators was selected to provide unbiased input. The selected programs were practical nursing and health related occupations, each offered by different comprehensive high schools. The project proceeded according to 29 tasks illustrated in a flow chart. Five of the tasks, concerned with data collection using the model for calculating per pupil costs, were explained in detail. After review of the model and cost data, the advisory committee approved the model as reasonable for data collection. Five conclusions and six recommendations concerning use of the model are stated in the report. Appended materials (122 pages) include: definition of terms, advisory committee meeting materials, a two part literature review, task, task flow chart, cost of utilities (electricity), expenditures and cost computations for the two programs (for health occupations using the program budget accounting system and for practical nursing using the traditional accounting system). A directory of 4,013 hospital-administered allied health and nursing programs throughout the United States is presented in the document. Section 1, Guide to Training Programs, is designed for guidance counselors, students, and health planners. It contains an alphabetical listing of training programs within major occupational categories and provides information on program length, educational entrance requirements, and number of graduates. Section 2, Guide to Hospitals Having Training Programs, is designed for hospital administrators and health planners. It presents an alphabetical listing of hospitals having training programs by state and by city and provides information regarding the individual hospitals. Both sections are preceded by explanatory notes and a table of contents. The four-part appendix includes: (1) Screener Questionnaire, part 1 of the survey sent to hospitals; (2) Detailed Program Questionnaire, part 2 of the survey; (3) Glossary of Occupational Titles, a compilation of terms used in the document; and (4) Titles of Programs, Reported by Respondent Hospitals, not contained in the above glossary. An index lists all hospital training programs included in the directory. (LH)

The instructional guide for basic drafting is designed to aid in the organization and teaching of a first year course in drafting at either the secondary or postsecondary level. The body of the document consists of a student manual which is made up of seven blocks of instruction: introduction and orientation, geometric construction, multiview projection, dimensioning, sectioning, auxiliary projection, and pictorial views. Each block contains general objectives for the total block, directions for use of the block, a pretest, and lessons consisting of performance objectives and learning activities. The learning activities are made up of reference sources, informational outlines, performance operational steps, and criterion tests. A teacher manual, designed to complement the student manual, presents additional, supplementary material to aid in the implementation and effective use of the student manual (answers to test questions, reference sources, and comments). Completion of the manual should give the student the background that is necessary for successful achievement in the advanced drafting phase. (Author/EC)

cation, \*Instructional Program Divisions, Integrated Curriculum, Intellectual Disciplines, \*Matrices

Identifiers—Elementary Secondary Education Act Title III, ESEA Title III

The document provides a means of organizing the career education learner outcomes for Texas students into a scope and sequence to be used as a framework for continued development of learner activities. The 177 learner outcomes (objectives) are presented in the following nine categories: career planning and decision making, career and occupational information, job acquisition and retention, attitudes and appreciation for a career success, skills in human relationships for careers, self-investigation and evaluation for career success, personal/work/societal responsibilities, economic factors influencing career opportunity, and education/career opportunity relationships. Grade levels, subject areas, and phase of instruction (introduction, development, emphasis) suggested for each outcome are listed in a chart for each of the outcomes. A summary chart shows the distribution of learner outcomes by subject area and grade level. The outcomes are also indexed for each grade level, with recommended outcomes listed by number under subject area headings. (Author/MS)

An understanding of the professional development of educators involved in career education is necessary for an understanding of changes occurring in the field of education. Changes brought about in education have caused shifts in the professional and occupational behavior of educators, only some of whom perceive themselves as change agents. Educators' needs and values are changing, due in part to a greater emphasis placed on work values and expectations similar to those held by workers in general. A characterization of today's educator shows a variety of identified values and responsibilities which can be transformed into learning experiences. Job security is a factor which influences educator change and is applicable to other work situations as well. The continued growth in career education has been possible because it calls for a wider group of educator and student responsibilities, skills, and new behaviors. Educators actively involved in career education can be seen as providing a model of professionalism which appears to have achieved an equitable balance between the goals of an institution and the individual goals of its members. These educators will exact from any future definition of professionalism a far more explicit understanding of their roles in implementing a changing institutional image. A three-page bibliography is included. (Author/EC)

Descriptors—\*Comparative Analysis, \*Effective Teaching, Evaluation Methods, Learning, Program Evaluation, Tables (Data), \*Teaching Methods

Adjunct instructional materials are questions and answers keyed to a text. The adjuncts for the study were prepared for textbooks used with two Air Force ROTC courses. Over 400 students at two universities served as subjects. Four experiments were conducted using a counterbalanced repeated measures design. Students used adjunct materials for portions of the text and served as a control for other portions of the text. The results indicate that adjunct materials promote learning of materials directly covered by adjunct questions, but do not contribute to application of the material covered by adjunct questions. The use of adjunct instructional materials is recommended. Further research, especially concerning the effects of various types of questions, also is recommended. (The document concludes with a 16-item bibliography and three appendices: adjunct materials instructions and questionnaires and the analysis of the data from the study). (Author)

Identifiers—Officer Grade Requirements, OGR

This report presents interim results of a study developing a methodology for management engineering teams to determine the appropriate grade requirements for officer positions based on job content and responsibilities. The technology reported represents a modification and extension of methods developed between 1963 and 1966. Results indicated that Manpower and Management Engineering personnel can accurately apply the Officer Grade Requirements (OGR) determination procedure. Recommendations are made for operational implementation and for determining the total distribution of non-aircrew officer grade requirements. (The document concludes with a 15-item bibliography and three appendices: definitions of job requirement factors, a partial list of predictions evaluated during development of the OGR policy, and illustrations of job descriptions and ratings.) Descriptors—\*Comparative Analysis, Comparative Statistics, Job Skills, \*Military Personnel, \*Personnel Evaluation, \*Supervisors, Tables (Data), \*Task Performance

Identifiers—\*Air Force

A test was made of the hypothesis that only immediate supervisors know enough about their subordinates' job activities to render job performance ratings. Pairs of supervisors who rated the quality of performance of 295 supply airmen had identified themselves as immediate supervisors and other-than-immediate supervisors. These pairs, working independently, rated the same airmen (job incumbents) on how well they performed individual tasks. Each supervisor was asked to rate each task that he was sure the subordinate did, but he was not told which tasks the subordinate had identified. The selections of tasks were tallied against the responses made by the incumbents on the same inventory. An incumbent's responses were relative time spent ratings. Tasks were classified by a scale of percent time spent,

and two supervisory levels were compared in terms of percentage of tallies (agreements) with the incumbents. The tallies were greater for tasks on which the airmen spent more time, but there was no detectable difference between immediate and other supervisors. It was concluded that in the Inventory Management and Material Facilities career ladders, at least, it was possible to obtain other supervisors who were as familiar with their subordinates' jobs as immediate supervisors. Identifiers—Project Senior Abilities

Project Senior Abilities (PSA) demonstrated and evaluated the concept that the needs and talents of older workers (over 55) can be matched with specific job requirements. An industrial advisory board identified occupational categories in the local economy which met the criteria of being temporary in nature with limited career opportunities and lacking in appeal to younger job seekers. Older persons employed in these mainly clerical, assembly, and packaging positions were paid through the Human Resources Center. PSA clients totaling 804, recruited through other agencies and the mass media, were interviewed. Positions were found for 280. The others were placed in a work force supplement program (skills bank). For all clients, data were maintained on the numbers and type of placements, referrals but no placements, and non-referrals. These data and personal characteristics were analyzed to assess potential factors which might prove predictive of successful employability. Detailed discussion and conclusions indicated that: aged persons had a need to work, there was a demand in industry for their skills, and job placements enabled workers to earn incomes above poverty level. Appended are: tables on client characteristics and attitudes, interview forms, and reprints of publicity articles. (Author/MS)

The career exploration view is designed to stimulate learning which will provide individualized feedback to students concerning their self-identities. The career conscious individual career education model is an outcome-oriented model designed to provide a comprehensive overview of the knowledge, skills, and attitudes individuals need to facilitate their total development. The model has four basic interrelated domains: (1) self-knowledge and interpersonal skills, (2) knowledge of work and leisure worlds, (3) career planning knowledge and skills, and (4) basic studies and occupational preparation. The concluding section, entitled Career Guidance: Program Content and Staff Responsibilities, presents a pro-

gram planning guide developed for use in the career education workshop for professional development sponsored by the Missouri State Department of Education. (VA)

Identifiers—Connecticut (Bridgeport)

The study unit is intended for use by teachers in an exemplary project in career education in Bridgeport, Connecticut for the school year 1973-1974. It consists of three complete units each for the kindergarten through grade 8 levels with five career clusters identified for grades 6, 7, and 8. The units for use at the kindergarten level focus on parents and work—in the home, outside the home, and volunteer work. Grades 1 and 2 study jobs in school and community. The units for grades 3 and 4 center around occupations in local and State government, communications in Bridgeport, and manufacturing in Connecticut. Some of the unit topics for grades 5 through 8 are: transportation, manufacturing, marine science, hospitality and recreation, marketing and distribution, and environment. Each unit includes its goals, behavioral objectives, and learning activities. Many also include sample tests, materials and resources, and bibliographies. Short career exploratory courses in cosmetology, horticulture, and musical instrument repair are also outlined. (NJ)

Identifiers—Connecticut (Bridgeport)

The final report of the Bridgeport Career Education Project covers the period from August 1, 1971 to August 31, 1974. The project has as its major goal the development of a comprehensive career education and development program beginning at the elementary level and continuing through high school. The initial phase of the project centered on informing principals, counselors, and teachers of participating schools about the overall project objectives. This effort was accomplished by a workshop designed for this purpose. Another workshop was conducted for developing curriculum guidelines and presenting information related to sources of occupational information for teacher use. The development and implementation of a career education materials center followed. Inservice training sessions were conducted on the effective use of the occupational materials. Efforts to involve the community as a whole in the career education program were also undertaken. The major conclusion of the report is that the support for career education concepts in Bridgeport has been very favorable. (VA)

The manual was designed for use by local school systems in order to maintain a comprehensive program of career and vocational education in the State of Georgia. The program includes, but is not limited to elementary career development programs, junior high exploratory and prevocational programs, secondary vocational cluster and cooperative programs, postsecondary and adult programs of technical and skilled training, job placement, work study, and vocational guidance. The comprehensive program of career and vocational education is described in detail in the manual, providing information to help local school systems formulate and prepare local plans for vocational education. Information regarding the program's purpose, type of program and level, methods, personnel requirements, contact person, funding sources, and references are provided for the following comprehensive prevocational and vocational high school programs: agricultural, business and office, vocational office, consumer and homemaking, occupational home economics, distributive, industrial arts, trade and industrial, and diversified cooperative training. Also treated are programs for students with special needs, finance and reimbursement, and definition of terms. (VA)

The instructor packet lists performance objectives, vocabulary, learning tasks, and supplemental activities for lessons 12 through 21.

Pretest and post-test keys are also included. The unit is concerned with the basic accounting theory as it is used with the combination journal and subsidiary ledgers. It also acquaints the student with payroll procedures and data processing for accounting. The material presented is closely coordinated with the other documents in the eight volume accounting unit. Elementary guidance materials providing career education activities for grades K-6 are presented for utilization by elementary teachers and elementary guidance specialists. Arranged by grade level, materials cover the following career education concepts: appreciation and attitudes, self-awareness, decision making, career awareness, and educational awareness. Subject areas include: language arts, social studies, math, art, homemaking, science, music, and physical education. Each activity includes information on the guidance objective, materials needed, procedure, and discussion, if applicable. A variety of implementation strategies are used, including: direct student involvement, vicarious student experiences, individualized instruction, interdisciplinary approaches, and management by objectives. Modification and additional activities supplied by teachers to meet the individual needs of each school and classroom are suggested to expand the effectiveness of the guide. (LH)

**Descriptors—**\*Administrator Guides, \*Career Education, Curriculum Development, Demonstration Programs, Educational Programs, Elementary Secondary Education, Evaluation Methods, Management Systems, \*Models, Needs Assessment, \*Program Administration, Program Descriptions, \*Program Development, Program Planning, Questionnaires, Staff Utilization

Using the example of a Career Education Model developed by the Orange County, California Consortium, the document provides guidelines for setting up career education programs in local educational agencies. Component levels, a definition of career education, and Consortium program background are discussed. Subsequent chapters include: Program Planning, discussing system designs for a district effort and for an individual school site; The Evaluation Design, describing the Consortium's adaptable design in terms of process and product evaluation; Needs Assessment, supplying a breakdown of compilation methods for each form used by the Consortium, and 11 inventory and survey examples; Staff Utilization, providing 11 sample forms helpful in facilitating staff organization; and Project Activity Management and Evaluation System, including an overview of the project, and discussing major functions, a time-line management chart, and a program budget. Supplementary sections include: Career Guidance, discussing K-12 and guidance center staff; Career Education Development, discussing a model curriculum development matrix, format design, class operations, articulation, and implementation; Utilization of a Learning Unit, discussing format; and Career Education Curriculum Proposal, presenting guidelines, instructions, and sample proposals. The Consortium has utilized the California State Department of Human Resources and Development as one of its main resources for course development and content. (LH)

The goals of the Career Motivation Program in the Akron Public Schools are to provide students in grades K-6 with activity-centered experiences geared to the development of self-concepts and attitudes toward work and an appreciation of all vocations and the dignity of all workers. Career motivation is the first phase of the Career Development Program; it is based on the belief that every healthy individual is at work at something, and its final outcome is the integration of career education into the total curriculum of the schools. Career motivation activities are presented in the guide to provide teachers at the kindergarten level with suggestions for introducing career education into the curriculum. Four units are included: (1) workers at school, children work—children learn; (2) workers at school, school staff; (3) people in the family work; and (4) workers in our neighborhood. Each unit contains developmental objectives, concepts, behavioral objectives, teaching approach and pupil activities, and a list of references and resources. (Author/EC)

Identifiers—Guam

The conceptual foundation for the career education program in Guam is presented in the document, which can serve as a resource for others wishing to implement similar programs. Rationales for the four-phase system (awareness, exploration, preparation, and continuing) are discussed in terms of students, teachers, administration, and society. They emphasize the need for every student who leaves a formal education system to have the necessary skills for employment. A position paper discusses plans for a limited revision of curriculum content in terms of the integration of systematic study and interaction of the following concepts: self, society and culture, career development and work ethics, environment, personal economics, and decision-making. The philosophy of the program incorporates the following concepts: self-awareness, academic proficiency, occupations, personal economics, society roles, value and attitude clarification, life-coping skills, leisure time utilization, decision-making, cultural awareness, and environmental awareness. A Latte Stone Model for career education is presented, comprising four phases of development: (1) Career Awareness, (Grades K-6); (2) Career Exploration, (Grades 7-9); (3) Career Preparation, (Grade 10 to the termination of formal education); and (4) Retraining and Upgrading. Lists of general and student expected outcomes for the overall program are provided. (LH)

Identifiers—Guam

A project to investigate the feasibility and effectiveness of a Mobile Career Guidance Laboratory is described and evaluated in detail in the document. Designed to serve all ninth grade students on Guam by providing group counseling and access to materials regarding career education, the mobile unit moved from school to school. Faculty orientation was provided and two and one-half to three hours of group and individual work was scheduled for nine students at a time. Activities included: a general explanation of career counseling; student evaluation of individual interest areas, abilities, and attitudes; discussions regarding job categories, requirements, success, and satisfaction; two films; dream time to explore aspirations; and independent study time with resource materials. Statistical evaluation by instrumentation, and participant observation were used, with the five junior high schools rated separately and together. Thirteen tables supplement the discussion. It is stated that the physical makeup, internal operation, and visitation schedule of the mobile unit were very successful in meeting career counseling needs for the ninth grade students. More counselor involvement and a followup on the mini-career information centers established at each junior high school is suggested. Project related material is appended. (LH)

Identifiers—Army, Project TALENT

An intensive investigation of the impact Army service has had on the quality of life for a representative sample of young Americans is analyzed in terms of possible improvement in Army personnel procedures. A total of 166 men (of a potential 200) and 49 women (of a potential 50) were interviewed. The information from these interviews; a review of interviewee lives before, during, and after Army service to about the age of 30; and Project TALENT (a 1960 national survey of high school students) information have been analyzed. Background and purpose of the study, a definition of the information required, a description of the sample group, procedures for collecting the data and the results of its analysis, and the impact of Army service on present quality of life are discussed. A summary indicates that, for the group as a whole, Army service had a positive effect on their subsequent quality of life. Results imply that the Army could improve in its career guidance and training programs and thus have an opportunity to make a significant improvement in the life planning activities of many of the nation's young people. One table and five figures supplement the discussion. (LH)

The supplementary report serves as documentation for the summary version (CE 005 383) and provides greater detail regarding study procedures and results. The investigation concerns the impact Army service has had on the quality of life of a representative sample of young Americans, which has been ascertained through interviews, data collection, and analysis of the Army's Project TALENT information. (Project TALENT was a 1960 national survey of high school students.) Chapter titles include: (1) Interview Development, discussing interview forms and the respondent's booklet; (2) Sample Selection and Characteristics, examining the participants and how they were selected and contacted; (3) Data Collection, presenting field data collection procedures used for various data; (5) Results, examining the characteristics of the male participants; and (6) Results for a Small Sample of WACs, examining the characteristics of female participants. The text is supplemented by 68 tables. A bibliography, table of contents for the interview forms and respondent's booklet, personnel involved, and a listing of the tables are appended. (LH)

The Demand for Scientific and Technical Manpower in Selected Energy-Related Industries, 1970-85: A Methodology Applied to a Selected Scenario of Energy Output. A Summary.  
National Planning Association, Washington, D.C.  
Note—36p.

**EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage**  
Descriptors—Demand Occupations, \*Employment Projections, Employment Statistics, Employment Trends, \*Energy, Energy Conservation, \*Engineers, \*Industry, Manpower Needs, \*Scientists, Tables (Data)

The primary purpose of the study was to develop and apply a methodology for estimating the need for scientists and engineers by specialty in energy and energy-related industries. The projections methodology was based on the Case 1 estimates by the National Petroleum Council of the results of "maximum efforts" to develop domestic fuel sources by 1980 and 1985. It is based on seven energy-related industries: electric generation; petroleum and natural gas extraction and petroleum refining; natural gas production, transmission, and distribution; coal mining; nuclear power production and radioactive waste disposal; manufacture of selected producers' durable equipment for electric companies; and energy-related construction. Employment of engineers and scientists is expected to increase 117 percent from 1970 to 1985, with a more rapid growth of demand for engineers than for scientists. Physicists, with an increase of 186 percent, and chemists, with an increase of 110 percent, are expected to comprise about 61 percent of the total demand for scientists. Demands for geologists and geophysicists will also continue. The projections indicate an average, annual additional requirement of about 11,200 engineers and 4,300 scientists by 1985; the future supply of engineers and scientists may be inadequate to meet the demands of energy/energy-related industries. Task Analysis for the Jobs of Freight Train Conductor and Brakeman. RDTR No. 263.  
Naval Ammunition Depot, Crane, Ind.  
Report No.—RDTR-263  
Pub Date 22 Jul 74  
Note—268p.; Several diagrams may reproduce poorly

**EDRS Price MF-\$0.76 HC-\$13.32 Plus Postage**  
Descriptors—Annotated Bibliographies, Diagrams, Employment Qualifications, \*Job Analysis, Job Skills, Job Training, \*Occupational Information, \*Rail Transportation, Safety, \*Task Analysis  
Identifiers—Brakemen, Train Conductors

The principal tasks performed by conductors, rear brakemen, and head brakemen during over-the-road freight operations are identified and described in the report. Forty-four tasks and subtasks are analyzed and grouped into six categories: basic handling tasks, prerin preparation and starting off tasks, over-the-road tasks, terminating tasks, operating emergency and malfunction tasks, and auxiliary equipment operating tasks. Task and subtask descriptions describe initiating stimuli, information processing and decision making, response made by the operator, and the feedback received. Task analysis includes task difficulty, potential hazards, and the criticality of each task. Operational sequence diagrams for each task, with additional information given concerning the decisions depicted, are provided. Evaluation measures can be ascertained from task data, training requirements, selection criteria, and performance. Illustrations of common train documents filled out by the conductor and an annotated bibliography of 43 titles dealing with job analysis are appended. Recommendations are made in the area of improving the safety of train operations. (Author/LH)

Mocker, Donald W., Ed. Jones, William C., Ed. *Why Teach the Humanities to Adult Basic Education Students?*

Missouri Univ., Kansas City. Center for Resource Development in Adult Education.

Spons Agency—Missouri State Committee for the Humanities, Jefferson City.

Pub Date Jun 75

Note—39p.

EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage

Descriptors—\*Adult Basic Education, \*Adult Students, Anthologies, Cultural Background, \*Curriculum Development, Ethnic Origins, Humanistic Education, \*Humanities, Humanities Instruction, Individualism, Productive Living

The publication contains an article on curriculum selection in adult basic education (ABE), three presentations on the humanities and ABE, and a concluding commentary. An introductory article, "Criteria for Selecting Curriculum in Adult Basic Education" by Donald Mocker, emphasizes the need for broader criteria for selection of ABE curriculum. Three papers, authored by educators of diverse backgrounds, address the question of what is basic in the humanities and why this must be included as part of the ABE curriculum. The papers, presented as part of a 1975 "town meeting," are: "Why Not Teach the Humanities to ABE Students?" by H. Bruce Franklin, "The Humanities in ABE: A Means of Achieving Productive Individuality" by Carmen Rodriguez, and "The Humanities: A Brief View of Potential Power" by Walter Bradford. The commentary on the three addresses is by William Jones. The authors stress that there are individual rights to full development of human potential and that human potential can best be understood through the humanities. The articles call for ABE learners to demand that they be given an education which nurtures cultural and ethnic pride. Objections are raised toward institutional goals of ABE and the narrow conceptualization of ABE and the adult basic learner. (EA)

Descriptors—\*Correlation, Data Analysis, Intelligence Level, \*Intelligence Tests, Learning Motivation, \*Motivation, \*Performance Factors, Stenography, Student Motivation, Typewriting, \*Vocational Education

The student sought to identify positive factors which might be used to increase the performance levels of students in vocational classes and to investigate the relationship between motivational characteristics (intrinsic and extrinsic) and individual performance. Subjects included students

in typing and shorthand classes and their two instructors. The students were grouped according to the following levels: high I.Q.—intrinsically motivated; high I.Q.—extrinsically motivated; average I.Q.—intrinsically motivated; and average I.Q.—extrinsically motivated. Procedures used in testing the six hypotheses formulated for the study were: intelligence testing; occupational preference inventory; pretest to measure developmental level of students and posttest for subject evaluation; and performance rating based on quality and amount of work accomplished. Instructors and instructional materials were also tested to rate their motivational orientation as intrinsic or extrinsic based on the occupational preference inventory. Data gathered from the study were analyzed, interpreted, and tested on their applicability to the hypotheses. No substantive evidence showed that different motivation or different combinations of variables promoted or inhibited the performance of the subjects in the study. A bibliography is included, and the instruments used in the study are appended. (Author/EC)

Identifiers—California

The annotated bibliography, listing source materials pertinent to career education, is arranged alphabetically within each of eight sections. The first four sections present selected sources of information on: (1) the nature of students in the 1970's, (2) the occupational market, (3) statements of objectives, and (4) methods of developing curriculum. The fifth section includes teacher and student resources relating to career education and occupational preparation divided into a list of California sources and out-of-State sources. Part 6 presents a list of basic sources and useful reports and a list of names and locations of sources for counselors and other guidance personnel. Sources dealing with program evaluation guidelines are listed without annotations in part 7. The eighth and final part contains supplemental sources of information related to career education, including printed materials, audiovisual, and other instructional aids. Appended is an alphabetical list of publications of the Center for Vocational Education. (Author/MS)

The report contains of collection of career education activities representative of those initiated by teachers of the Penasco and St. Anthony's Schools (Penasco, New Mexico) during the first semester of implementation (second semester, 1974) of an integrated program for grades K-12. Each activity was recorded by the program coordinator following classroom visitations. The grade level, subject area, and a brief description of the

lesson, followed by an evaluative statement of the outcome, are provided. Some of the activity reports include unedited student writings or responses. The activities are arranged according to grade levels: kindergarten, primary, intermediate, junior high, and senior high. A broad variety of activities were used at the various levels, including role playing, discussion, and field trips. Self-awareness, music appreciation, career awareness, and career exploration were among the career education concepts stressed in classroom activities. Some of the activities were teacher-developed, and others utilized commercially prepared materials. (MS)

Descriptors—\*Adult Basic Education, \*Adult Educators, \*Educational Television, \*Program Descriptions, Program Evaluation, \*Teacher Education

The report describes the accomplishment of the objectives of a project, the overall purpose of which was to disseminate a video-taped adult basic education teachers training program (Basic Education: Teaching the Adult) to interested institutions of higher education in 10 educational regions. The 10 objectives dealt with conducting regional orientation seminars for regional, state, and higher education institutional staff, selecting institutions, providing technical assistance and consultation, coordinating regional and state project activities, delivering course material, supervising the evaluation component, conducting evaluation sessions, and disseminating the project evaluation report. The successful fulfillment of each of the objectives, except for regional evaluation meetings which were possible in only one region due to lack of funds and time, is discussed. Project problems are described as few in number and as mainly the result of temporal constraints.

The report also includes a calendar review of the one-year project and five specific recommendations for future projects. Appended are: the program, agenda, conference evaluation, and letters from two national conferences held for evaluation of the project, a report of Region Five professors' evaluation meeting in Indianapolis, and a copy of the Ohio State Award. Research, Employment Qualifications, \*In-  
dividual Characteristics, Job Placement, Job  
Skills, Personnel Selection, \*Predictive Ability  
(Testing), \*Problem Solving, Task Analysis,  
\*Task Performance

The report describes the fourth and final study in a program of research into the relationships between the characteristics of human tasks and the abilities required for task performance. The goal was to generate principles for identification of ability requirements from knowledge of the characteristics of a task and of variations in the conditions of task performance. Such knowledge has implications for selection and training of personnel. In this fourth study, possible interactions among task variations, ability profiles, and subject strategies were examined within the context of troubleshooting and problem-solving tasks previously studied. Subjects' strategies were defined in terms of their method of problem-solving under each level of task difficulty and perceptual complexity. Subgroups adopting one of several kinds of strategy were then analyzed to determine the relationships between abilities and strategies, and strategies and performance. The recurrent findings support the contention that abilities are sensitive to differences among tasks, making them more precise descriptors of performance than the broader rubrics (e.g., mental, motor; cognitive, noncognitive; etc.) which have been in vogue. In general, knowledge of a subject's problem-solving strategy was useful in obtaining a clearer understanding of ability requirements under different conditions of task performance. (Author)

Identifiers—California

The purpose of the study was to help define the role of the county vocational education coordinator by surveying the opinions of professional educators. The following five population groups representing the 31 counties in the central region of California were chosen to respond to a mailed survey instrument: county vocational education coordinators/directors, regional occupational program coordinators/directors, district superintendents, principals, and vocational education teachers (department heads). A total of 393 individuals out of 544 who were contacted returned the survey, which elicited responses concerning: rank order given 12 vocational education program functions, the improvement needed for each function, and the agency/person who should have primary responsibility for assisting school staff and district staff with the 12 functions. The tabulated findings are analyzed by groups, county

class, county, and combined into composite results. Mean rank scores, mean improvement scores, average frequencies, and percentages were computed on the data. The survey produced 10 major conclusions and seven general recommendations related to the role of the county coordinator and the 12 functions. Appended are a list of school districts within the counties surveyed, definitions of the 12 program functions, and a list of county classes. (Author/MS)

Identifiers—Minnesota

The document presents the final report of a study to measure and compare the satisfaction and satisfactoriness of office employees 18 months after graduation from model office, cooperative office education, and office procedures courses. Differences among the three programs on a number of job- and education-related variables were also investigated. The population for this study consisted of 713 individuals who had graduated from Minnesota public secondary schools in 1973, having completed the three types of programs listed. Information on the graduates included: in-school measures, personal questionnaires, Minnesota satisfaction questionnaire, and the Minnesota satisfactoriness scales for employers. Definitions of terms used in the report are given, and specific questions to be answered, a review of related research, the need for research, and limitations are discussed. Independent and dependent variable instruments, data collection, population and sample, and data analyses are described. Findings are presented in terms of the specific questions to be answered followed by results of appropriate data analyses. Conclusions and recommendations are enumerated. A bibliography is provided, and 31 tables supplement the discussion. Appended material includes a questionnaire and communication forms related to the study and 19 additional and detailed tables. Identifiers—Navy

An experimental Basic Electricity and Electronics course (BE/E) utilizing a lock-step, instructor presentation methodology was developed and evaluated at the Service School Command, Great Lakes. The study, directed toward the training of lower mental group, school nonqualified personnel, investigated comparative data on test performance, attitude, and attrition of 50 students in an experimental group matched to a control group within the ongoing individualized BE/E training system. The results revealed significantly reduced attrition within the experimental group, control group, and overall Great Lakes BE/E School with no significant differences in quality of the graduates of the two treatment

groups. Attitudinal data was generally positive for both groups and not significantly different. Two factors were concluded to be responsible for the program's success: the focus of management attention to problems of training lower ability individuals in both groups, and the introduction of prestudy sessions into the experimental group. Appendixes (55 pages) include: statistical tables comparing test performance of the two groups, statistical analyses of test and attitudinal questionnaires items, instructor comments on the course, instructional materials readability and student reading ability, the prestudy concept, and cost breakdown for conducting the research. Identifiers—\*Project TALENT

Data on the responses of nearly 54,000 individuals from the original sample of approximately 200,000 11th and 12th grade students are presented in an 11-year followup on the 1960 Project TALENT survey. Information is arranged regarding the educational, career, and personal and family experiences of the group, and their reflections on the value of these experiences in relation to their present activities and plans. The scope of the information contained in the 11-year followup questionnaire mailed to each of the participants is outlined and highlights of the data are discussed. The bulk of the document (100 pages) is taken up by appendixes, which contain the tabulated data. Appendix A contains the distributions of responses to individual questions from the questionnaire. Responses to a five-year followup questionnaire are presented in Appendix B. Appendix D discusses sampling and weighting methodology. It is stated that the data in the report are essential for a researcher who plans a Project TALENT data bank study and suggests important avenues for investigation to others who might be unfamiliar with the resource. The Professions, the Police, and the Future.

Pub Date 4 May 74

Note—11p.; Paper presented at the National Endowment for the Humanities Symposium on the Humanities and the Police (Washington, D.C., May 4, 1974)

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—Futures (of Society), \*Police, Police  
Community Relationship, \*Professional Occu-  
pations, \*Role Conflict

In presenting a forecast of the emergence of the police profession using a sociological approach based on societal processes and relations, both the discussion of professionalization of the police in the bourgeois literature and a more general discussion of the professions by Talcott Parsons, taken as the foremost structural-functional theorist of the professions, are considered. An inherent contradiction was found in the characterization of professional police in these terms, and a reconsideration of the professions and the police is necessary. The concept of reproductive activity is suggested which is substantively understood as the process of reproducing the social order, especially the working class. This activity is the activity of the professional and of the police. The exercise of control over this activity renders the professionalization of the police impossible. (Author/EC)

Identifiers—New Mexico

The development of a model for career education at the K-12 levels is presented in the document. Thirty career education objectives were evaluated by teachers, counselors, parents, and career people in the Las Cruces, New Mexico, School District; they were asked to rate the objectives as to their relative importance and to determine at what grade level each objective should be presented. The 10 career education objectives of the New Mexico State Department of Education are also included. Making up the bulk of the document, career education resource materials available at the Las Cruces Public Schools' Educational Service Center are listed, described, and their grade level given. These include hooks, films, kits and games, and tapes. Materials available from the State Adopted Textbook List are also presented and described. Several useful career education models for possible use in the Las Cruces system are presented, and, in the concluding section, 31 abstracts of related career education documents available through ERIC Document Reproduction Service are offered. The state of the art of home fire safety educational material was reviewed to prepare a bibliography of home fire safety educational materials available from major public and private sources. Sources contacted were: National Fire Protection Association, National Safety Council, U.S. government agencies, private publishers and film distributors, insurance organizations, trade associations, fire safety equipment manufacturers, and local fire departments. The materials were organized into three categories: literature, films, and other materials. The literature category is briefly described as mainly written for adults and directed to occupants of one and two family dwellings. Additional information on the intended audience, topics covered, and the quality of the literature is provided. Materials in the other two categories are described in the appended annotated bibliographies. The 34-page appendix lists 156 literature items, 31 films, 2 slide shows, and 3 flipcharts. The bibliographies are arranged according to source of the materials, and each page is presented in chart form providing the title, a brief description of the topic, a physical description, the source, and the cost for each item. **Convention and Recommendation Concerning Vocational Guidance and Vocational Training in the Development of Human Resources.**

International Labour Office, Geneva (Switzerland).

Pub Date 23 Jun 75

Note—30p.

**EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage**  
Descriptors—Career Education, Developed Nations, Developing Nations, Disadvantaged Groups, \*Educational Policy, Equal Opportunities (Jobs), \*International Organizations, International Programs, Job Training, Labor Force, \*Manpower Development, Manpower Utilization, \*Occupational Guidance, Policy Formation, Program Development, Standards, Vocational Counseling, \*Vocational Education

The document presents the new international convention (with five articles or policy statements) and the formal statement of recommendations adopted by the International Labor Conference on June 23, 1975. Prepared by the International Labor Office, the instruments concern vocational guidance and vocational training in the development of human resources. The texts of the instruments were discussed at two successive sessions of the International Labor Conference by a technical conference committee composed of representatives of workers, employers, and governments. The convention contains five provisions regarding policies and programs. The recommendations contain 15 topics: (1) general provisions, (2) policies and programs, (3) vocational guidance, (4) vocational training, (5) training for managers and self-employed persons, (6) programs for particular areas or branches of economic activity, (7) particular groups of the population, (8) promotion of equality or opportunity of women and men in training and employment, (9) migrant workers, (10) training of staff for vocational guidance and vocational training activities, (11) research, (12) administrative aspects and representative bodies, (13) periodical reviews, (14) international cooperation, and (15) effect on earlier recommendations. Descriptors—\*Abstracts, Foreign Countries, Labor Force, \*Manpower Development, Manpower Utilization, Newsletters, Publications, \*Rural Education, \*Vocational Education

Abstracts of material covering a variety of topics regarding vocational and labor development throughout the world are presented in the fourth dispatch. Noted, in particular, are publications regarding education and training in rural areas, research, vocational guidance, and international instruments. The first section, News in Brief, contains 21 news items from around the world under the following headings: Forthcoming Events; New Institutions; New Policies; Management; Research; Information and Documentation; Abstracts Services; and For the Bookshelf. The second section contains 17 abstracts of various publications which present the author, title, bibliographical references, translation if necessary, subject analysis, and contents analysis. A list of eight periodical publications from various countries that have already been abstracted is included. (LH)

**The Need for Change in Industrial Arts Based on Societal and Industrial Conditions.**

Pub Date Apr 75

Note—155p.; Master's Thesis, University of Wisconsin-Stout

**EDRS Price MF-\$0.76 HC-\$8.24 Plus Postage**

**Descriptors**—\*Educational Change, Educational Development, Educational History, \*Foreign Countries, \*Industrial Arts, \*Industrialization, \*Social Factors, Vocational Education  
**Identifiers**—Great Britain, Russia, Sweden, \*United States

The author has presented a historical review of societal/industrial conditions affecting the development of manual education to determine if a need for change in industrial arts exists at the present time. Societal conditions, industrial conditions, and the resulting educational response are examined in: Russia (mid-19th century), Sweden (19th century), England (19th century), America (mid-19th century to 1920), and America (present time). In Russia, the 1861 emancipation resulted in freed, untrained peasants, who formed the basis of the working force required for industrial development. The introduction of Sloyd (a system of handwork or manual training in Scandinavian countries) in Sweden was more an attempt to revitalize a society than to produce skilled workers. In England, the Arts and Crafts Movement was a protest against the dehumanization of workers. Decay of the apprenticeship system in America necessitated the development of manual training. As dissatisfaction with manual training became apparent, industrial arts, aimed at helping students understand industrial processes and materials, appeared on the scene. Industrial arts is still making use of general shop today as it did in the 1920's. The author contends, in light of the data collected, that a need for change in industrial arts currently exists. **Descriptors**—Course Content, Course Descriptions, \*Curriculum Design, Curriculum Development, Curriculum Guides, Curriculum Planning, Food Service Industry, \*Food Service Occupations, \*Hotels, Instructional Materials, Occupational Home Economics, Occupational Information, Post Secondary Education, Program Development, Program Planning, Recreation, \*Secondary Education, \*Service Occupations, Tourism

**Identifiers**—\*Hospitality Education

The guide presents key steps in establishing hospitality education curricula, based on recommendations of more than 300 surveyed educators and industry personnel and on information from over 60 proposed or existing curricula. The scope of the hospitality industries is described as including the categories of food service, lodging, tourism, and recreation. Suggestions are provided for establishing the program. Course descriptions (topic descriptions, performance objectives, learning experiences, and evaluations) are provided for the following core subjects: self-evaluation of interests and aptitudes, development of hospitality attitudes, personal appearance, hospitality-core job skills (change-making and record keeping), job analysis, and obtaining, retaining and terminating employment. Information on job-related training for each of the four major hospitality categories includes entry-level job descriptions and advancement opportunities and outlines of courses in the job skills curricula which cover: food service (sanitation, equipment safety, quantity cookery, and serving patrons), lodging (history and scope, front office, switchboard, uniformed service, housekeeping, and law and security), tourism (history and scope, geography, analyzing destinations, required qualities, and travel arrangements), and recreation (leadership, program planning, and practical skills). Opportunities for post-secondary education are briefly described. A six-page bibliography lists references, audiovisual aids, and information sources. (Author/MS)

**Identifiers**—Illinois

The document reports on a model, performance-based, interdisciplinary program to prepare vocational directors in Illinois. Five objectives in the Occupational Education Administration Model's third year were: (1) field-test the model; (2) develop implementation strategies for a transportable program; (3) provide experiences that would assure the attainment of 159 administrative and leadership competencies to 10 program participants; (4) place all participants in occupational education leadership positions by September 1975; and (5) qualify all participants to receive State of Illinois Level I supervisory certification. The degree of achievement of the objectives and the project's procedures are recounted briefly. Participants served internships for a school year, supervised in working on the 159 performances by a local cooperating administrator while completing course requirements for supervisory certification and engaging in enrichment activities. Forty pages offer project personnel information, followed by two three-page sections summarizing the project's evaluation and conclusions. The evaluation data is interpreted as bearing out the project's emphasis on interpersonal proficiency, and the project has prepared employable Occupational Education Administrators, but refinement of the orientation provided the project's instructors is needed. Extensive appendices (66 pages) include the competency list, the performance assessment system, two followup studies, and a project evaluation. (AJ)

**Descriptors**—\*Change Strategies, Environmental Influences, Environmental Research, Essays, Futures (of Society), Human Dignity, Human Engineering, \*Humanization, Human Relations, Job Enrichment, \*Labor Force, Organizational Climate, Organizational Development, Program Descriptions, Social Change, \*Work Attitudes, \*Work Environment

A series of essays discussing ideas about humanizing work are presented in the document. Three major sections divide the essays, and each includes a preface with comments suggesting the central focus and questions with which the authors are concerned. The first section deals with the history, philosophy, and issues related to work and contains essays by Ivar Berg, George Strauss, Irving Bluestone, Franklin Wallick, Mitchell Fein, Marcus Raskin, Michael Maccoby, Alan Gartner, and Frank Riessman. The second section discusses specific illustrations, both exemplary and incredible, with essays by Robert Schrank, Bennett Kreman, Jack Russell, Myra A. Peabody, J. Davitt McAteer, M. H. Ross, Edward Walsh, and Walter Kleiman, Jr. The third section provides a look into the future, and the authors include Louise Kapp Howe, Stevanne Auerback-Fink, Richard J. Schonberger, Robert Schrank, and Howard B. Radest. The introduction, prefaces, and epilogue are written by Roy P. Fairfield. A list of the contributors is provided and includes biographical notes. **Identifiers**—Dental Auxiliary Education Programs

The document is the final report of a project to develop a suitable method for studying the task content of accredited dental auxiliary education programs and the relationship between the tasks taught in such programs and the tasks involved in a professional situation. The set of instruments developed and pilot tested in 63 programs was used to collect data concerning: (1) characteristics of educational institutions and their accredited programs, (2) characteristics of faculty and preceptors responsible for teaching dental and dental-related tasks, (3) dental tasks taught in accredited auxiliary education programs, and (4) the level of responsibility with which graduating auxiliary students are expected to perform dental tasks. Chapters include: Introduction, providing background material; Review of Literature, presenting historical and current perspectives, task analysis, and educational curriculum and the world of work; Methods and Procedures, discussing the basic design of the study; Analysis and Findings, examining sample characteristics, survey instruments, biographical profiles, and dental task information; and Summary, Discussion, and Conclusions. Tables supplement the discussion and appendices include the program questionnaire, interview, and letter forms; task inventories; reference notes to tables; and a hierarchical clustering scheme for 52 dental auxiliary education programs. **Identifiers**—\*Work Samples

Work samples are job tasks used as a diagnostic tool in the evaluation of vocational rehabilitation clients. The manual was developed to provide a standardized format for the construction, administration, and interpretation of necessary information from work sample assessment techniques used by vocational evaluators. The outline is divided into seven sections: introduction (title, assessment description, job listing, and related validity); instructions to the evaluator (prerequisites, work sample conditions, administration equipment, and setup and breakdown); administration (client orientation, and instruction and demonstration); scoring (technique, tables, forms, description of norm group, norming method, and reliability); insights; construction (diagrams and/or photographs, materials list, and assembly instructions); and references and appendix. Each section discusses what type of information should be included within a specified topic and in what order it should be presented. Two different examples using the format of the work sample manual are given as a guide: Hurley Upholstery Job Samples, and The Order Picking Work Sample. (Author/EC)

Descriptors—\*Diagnostic Tests, Evaluation Criteria, \*Evaluation Methods, Handicapped, \*Measurement Techniques, \*Norm Referenced Tests, Performance Criteria, \*Vocational Rehabilitation

Identifiers—\*Work Samples

Work samples are commonly used to aid in the assessment of a client's potential for functioning in various competitive occupations. To determine an individual's position relative to a particular reference group the most commonly used norms are those based on scores of other clients who have performed a specific work sample, and performance scores achieved by a sample of the general population. Different advantages and disadvantages can be found in both methods of assessing a client's potential for success in a particular job. Work measurement techniques developed by industrial engineers may provide accurate estimates for assessing the client's competitive employment potential involving manual operations requiring brief instruction. Work measurement includes the stopwatch time study and predetermined motion time systems. These may be used to provide valid and realistic performance standards for many work samples. The main concerns include the time needed and the methods used to perform the task. Individuals trained in work measurement may be contacted through the American Institute of Industrial Engineers. (Author/EC)

Descriptors—\*Employment Potential, \*Handicapped, Personnel Evaluation, Program Planning, \*Rehabilitation Programs, \*Vocational Rehabilitation

Identifiers—\*Prevocational Unit

One of the essential services in rehabilitation centers is offered in the prevocational unit. This unit explores the client's abilities through specific activities in a variety of work experiences directed toward evaluating the client's vocational potentialities. The six major objectives of such a unit are described and organization and program planning outlined. Program activities, necessary equipment, and possible employment opportunities are suggested for the following areas: clerical work, skilled and semiskilled occupations, service occupations, and subprofessional occupations. In planning the unit's program, special consideration must be given to safety precautions for the protection of the workers. Information about the client should be gathered from all staff members. Following the client's experience in the unit, the supervisor should provide specific reports, recommendations, and a general interpretation of the client's potentialities. Recommendations for placement, vocational training, additional vocational evaluation, or temporary or permanent assignment to a sheltered workshop will be based on these reports. Program planning must be developed with the cooperation of the vocational counselor, placement workers, other staff, as well as an advisory council composed of community members. A suggested floor plan is illustrated, and lists of necessary equipment and resource materials and a bibliography are included. (Author/EC)

Descriptors—\*Achievement Tests, Aptitude Tests, Handicapped, Intelligence Tests, Personality Tests, Psychological Evaluation, \*Psychological Tests, Reading Tests, \*Reference Materials, Testing, \*Tests, \*Vocational Rehabilitation

Identifiers—\*Vocational Evaluation

The purpose of the document is to help fill the gap between the use of psychological tests by evaluators and evaluators' feelings about their competence in using these devices. The first section contains descriptions of 33 tests and instruments presently used in evaluation facilities serving a wide variety of clients. These tests are divided according to the following areas: achievement batteries and reading tests (six tests), character and personality (four tests), intelligence (three tests), vocations—clerical (four tests), vocations—interests (six tests), vocations—manual dexterity (four tests), and vocations—mechanical ability (three tests). The tests are described with respect to 10 categories: purpose, final score, description, materials required, appropriate groups, technical consideration, American Psychological Association (APA) level, sources of information, availability, and comments. The four-page second section of the document provides the evaluator with a basic list of reference materials about testing and statistics. A list of test publishers is included. (Author/EC)

Descriptors—Evaluation Methods, \*Guidelines, Records (Forms), Rehabilitation Programs, \*Reports, \*Technical Writing, \*Vocational Rehabilitation

The document serves as a guideline to report writing for vocational evaluation and work adjustment programs, providing general principles for content with the aim of developing some uniformity in report organization. Common problems in report writing are described from the reader's and writer's perspective. Basic principles are listed which should be considered in effective rehabilitation report writing to improve the readability of the report. Three major types of report formats for evaluation and training reports are the narrative report, the basic checklist, and the narrative checklist. Information that should be included in reports on clients includes: identifying information, reason for referral, background information, psychological and vocational test results, work performance, work habits and behaviors, physical characteristics, and summary and recommendations. Evaluation and training reports should also discuss the client's role or include client input. A selection of nine examples of report formats used in different rehabilitation facilities are included to serve as guides in report writing techniques. Report writing aids in preparing and organizing information for the final document include: a detailed topical outline, an open form or outline, and a checklist to evaluate report content. A bibliography is included. (Author/EC)

**Identifiers—**\*Work Evaluation

A two-day workshop, conducted to study the different meanings of the concept of work evaluation, was participated in by representatives from rehabilitation facilities, work evaluation training programs, institutional organizations, and rehabilitation research and training centers. In addition, different types of patient populations were represented—physically handicapped, emotionally disturbed, mentally retarded, narcotic addict, penal offender, and culturally disadvantaged. Edited transcripts are provided of the proceedings, which were divided into three sessions which discussed the following areas: goals of work evaluation; scope and definition of work evaluation; and methods, models, and functions. A fourth session was left unstructured so that each group could choose its own subject area. Topics chosen were: ethics of work evaluation, the work evaluation process, and competencies of work evaluators. The main points of agreement reached during the workshop are summarized under the following topics: differentiation of processes, the work evaluation process, goals, scope, the work evaluator, and the client. A list of participants in the workshop is appended. (Author)

**Descriptors—**Adjustment (to Environment), \*Daily Living Skills, \*Educable Mentally Handicapped, Educational Programs, Handicapped, Lesson Plans, Personal Adjustment, Self Evaluation, Social Adjustment, \*Teaching Guides, Unit Plan, \*Vocational Adjustment, Vocational Rehabilitation

The program guide is designed primarily to teach the areas of personal, social, and work adjustment to vocational rehabilitation clients to help facilitate their future adjustment to life and work in the community. The basic curriculum is directed to the level of the educable mentally retarded and is also helpful for junior and high school teachers of the educable mentally retarded. It is organized into three areas of study

and training: personal adjustment (self-evaluation, personal health and hygiene, and personal appearance and grooming); social adjustment (establishing basic etiquette, social relationships, and use of leisure time); and work adjustment and preparation for community living (vocational adjustment, money management and consumer education, home and family adjustment, and community orientation). Each of these areas is divided into individual teaching units containing a list of suggestions for lesson plans with their related objectives, contents, activities, and teaching and evaluation materials. An evaluation guide which may be used on completion of the total program is included. (Author/EC)

**Identifiers—**\*Work Behavior

Systematic procedures in the observation, description, and assessment of the rehabilitation client's work behavior and potential in workshops and other sheltered work programs are offered, to provide supervisors with training in observation. The color-coded manual defines 12 basic areas of work behavior crucial for work functioning, which can be used by floor supervisors and evaluators to organize their observations concerning the client's work performance and job readiness. For each area concrete behaviors or cues are suggested, which the evaluator can refer to as an aid in recognizing and rating the work behavior being expressed by clients. Use of the manual and Staffing Preparation Form (for rating clients) in rehabilitation work programs resulted in a significant increase in the ability of work program staffs to communicate with one another and with counselors, psychologists, and placement workers. These materials and procedures can be used by floor supervisors in workshops and other rehabilitation work programs regardless of the amount of formal training. Features of the training program and observational training of individual floor supervisors in the clinical use of the procedures are discussed with reference to experiences in the testing agencies as to the advantages of the observational procedure. The annotated bibliography contains 108 entries of literature on work evaluation and adjustment produced in 1974. It also serves as a catalog to the loan literature available from the Materials Development Center (MDC) of the Department of Rehabilitation and Manpower Services at the University of Wisconsin-Stout, Menomonie. A Keyword-out-of-context Title Index is provided to aid the user in quick identification of annotations relevant to a particular topical area. An author index is also provided. These indexes also provide access to the literature listed in the comprehensive bibliography published in 1974 by MDC. (Author/EC)

and training: personal adjustment (self-evaluation, personal health and hygiene, and personal appearance and grooming); social adjustment (establishing basic etiquette, social relationships, and use of leisure time); and work adjustment and preparation for community living (vocational adjustment, money management and consumer education, home and family adjustment, and community orientation). Each of these areas is divided into individual teaching units containing a list of suggestions for lesson plans with their related objectives, contents, activities, and teaching and evaluation materials. An evaluation guide which may be used on completion of the total program is included. (Author/EC)

**Descriptors—**\*Ability Identification, Behavior Problems, \*Behavior Rating Scales, Behavior Standards, \*Employment Potential, Evaluation Methods, Handicapped, Sheltered Workshops, \*Vocational Rehabilitation

**Identifiers—**\*Work Behavior

The behavior identification format was developed as an aid for the observation, identification, and recording of work and work-related behavior which may limit or enhance the employment opportunities of the vocational rehabilitation client. A rating system consists of a series of judgements which are made regarding the client's behavior as they relate to employment. Its primary concern is to determine if the client's existing work behavior interferes with his ability to hold a job in competitive or sheltered employment. The three rating classifications are A (acceptable), B (selective placement), and C (change needed)—each subdivided into two or more precise categories. The behavior identification form is divided into 22 categories with space for comments on behavior and for the rating. The categories provide guidelines for the observation and identification of specific behaviors. A definition is provided of each category which includes examples of important situational variables which influence behavior, and examples of ways in which behavior problems may be displayed. **Identifiers—**\*Texas

A mail survey of secondary vocational-technical directors in Texas was conducted to identify the tasks they performed and to determine the amount of time spent in the performance of these tasks. Data were gathered using a 56-item questionnaire given to all secondary vocational-technical directors in the state (169) with an 82 percent return rate. Fifty-six competencies or tasks were identified in the instrument, grouped under six headings: (1) planning, organizing, and administering; (2) improving educational opportunities; (3) securing and developing personnel; (4) providing educational facilities, equipment, materials, and services; (5) providing and maintaining adequate fiscal resources; and (6) developing and maintaining effective communication. Each task was analyzed in the following areas: rank by percent of respondents performing, cumulative sum of average time spent by all respondents, average time spent by all respondents, average percent time spent by respondents performing, and percent of respondents performing. It was concluded that the respondents could differentiate their tasks and the time spent for their performance. The data produced by the

research offers useful information for developing competency-based instructional programs and for curriculum decision making. A bibliography is included and the questionnaire appended. (EC)

 Identifiers—\*Texas

A mail survey of vocational-technical teachers in Texas was conducted to identify tasks performed, knowledge required, and amount of time spent in the performance of these tasks. A questionnaire was given to 1,149 vocational-technical teachers with 85 percent responding. The teachers were classified according to vocational program areas and were asked to identify the tasks they performed and the time spent on each of 105 given tasks in the areas of: instructional planning, execution, and evaluation; program planning, development, and evaluation; management; guidance; school-community relations; student vocational organization; professional role and development; and coordination. Data are arranged according to vocational education program areas and a composite analysis of the data across program areas was also performed. Each task was analyzed in the following areas: rank by percent of respondents performing, cumulative sum of average percent time spent by all respondents, average percent time spent by respondents performing, and percent of respondents performing. It was concluded that the respondents could identify the tasks performed and the amount of time required. The research offers useful information for curriculum decision making and developing instructional programs. A bibliography is included and the questionnaire appended. (EC)

 Identifiers—\*Texas

A mail survey of vocational-technical counselors and guidance personnel in Texas was conducted to identify the tasks performed and amount of time spent in the performance of these tasks. A questionnaire was distributed to 40 occupational orientation teachers (with 87 percent responding) and 160 counselors and guidance personnel (with 92 percent responding). Eighty tasks were identified and divided into 11 sections: pupil appraisal, staff consulting, referral work, counseling, public relations, placement, planning and development of the guidance program, educational and occupational planning, counselor as a person, parent help, and local research. Data were analyzed according to the occupational orientation educators, vocational-technical counselors and guidance personnel, and a composite analysis of the two groups. Each task was analyzed in the following areas: rank by percent of respondents performing; cumulative sum of average time spent by all respondents; average percent time spent by all respondents; average percent time spent by respondents performing; and percent of respondents performing. The

study concludes that the respondents could identify the tasks and the amount of time required by each task. The data produced offers useful information for developing curriculum for vocational-technical counselors and guidance personnel. A bibliography is included and the questionnaire appended. (EC)

Descriptors—\*Dictionaries, \*Occupational Clusters, \*Occupational Information, Occupations, \*Sex Discrimination

Identifiers—Age Discrimination, \*Dictionary of Occupational Titles Third Edition

The publication brings job titles in the Dictionary of Occupational Titles, Third Edition, into conformance with equal employment legislation and with recent administration policy statements and instructions which prohibit the use of sex- and/or age-referent language by the public employment service. Job titles that have sex and/or age identification are, wherever possible, revised in favor of titles that do not connote age or sex. Nearly 3,500 job titles have been revised and are listed in the publication, including approximately 2,200 base job titles, 130 defined related job titles, 1,100 undefined related job titles, three master definition titles, and 60 term titles. Five different job title data arrangements are provided: (1) an alphabetical listing by current Dictionary of Occupational Titles, Third Edition, job titles which are affected by this revision; (2) a numerical listing by the nine-digit codes of the Dictionary job titles affected by this listing; (3) an alphabetical listing by revised job titles; (4) an alphabetical listing by current Dictionary of Occupational Titles, Third Edition, master definitions and term titles which are affected by this listing; and (5) an alphabetical listing by revised master definition and term titles. **Exemplary Exploratory Program for Eighth Grade Students: Sherwood School District. End of Year Evaluation Report.**

Sherwood School District 88J, Oreg.

Pub Date 13 May 74

Note—66p.

**EDRS Price MF-\$0.76 HC-\$3.32 Plus Postage**

Descriptors—Business Education, \*Career Education, \*Career Exploration, Course Descriptions, \*Grade 8, Home Economics, Industrial Education, \*Pilot Projects, \*Program Evaluation, Vocational Education

The document is an evaluation report of an exemplary program to introduce eighth grade students of Sherwood High School (Sherwood, Oregon) to an exploratory and career-oriented program in the four areas of business education, home economics, industrial education, and vocational agriculture-horticulture. The assessment team gave major overall commendations and recommendations for the program. The document consists mainly of teachers' self-assessment reports with specific comments in the four areas of the program. Information is given according to course objectives, accomplishments, the status of identified objectives, and recommendations. Letters related to the evaluation process are also included. Brief exploratory course outlines and time plans for the four areas are presented for eighth grade. (EC)

Descriptors—\*Computer Graphics, \*Computer Science, Drafting, Guides, \*Instructional Materials, \*Programming, Secondary Education

The document provides an introduction to computer graphics and is intended to be used as reference material to assist the high school drafting student in compiling information. A teletype machine with an acoustical coupler for telephone hookup and a time-sharing Peripherals Corporation flatbed plotter were acquired, and an illustrated programmer's guide was prepared as reference for utilization of the system. The guide is intended to provide drafting students with an explanation of the techniques of plotting utilizing a G.E. 225 time-sharing computer and a time-sharing Peripherals Corporation flatbed plotter (TSP212). Section 1 provides a basic understanding of computerized drafting so that plotter output can be generated with minimal Fortran training. Available subroutines and instructions on how to use them are discussed. Six subdivisions cover: glossary of terms, using the time-sharing system, using the time-sharing plotter, subroutines, normal program structures, and sample program with plotter. Section 2 deals with the Fortran makeup of the subroutine available in the system. It provides knowledge of the structure of plotter-oriented subroutines so that, with a knowledge of Fortran, one can expand subroutines to provide a broader library of available subroutines. It is divided into areas on programming and subroutines. (Author/EC)

**Educational Counseling of Adults: Where It's At.**

Pub Date Oct 75

Note—12p.; Paper presented at the Conference on Advising and Counseling Adult Learners (Albany, New York, October 1-2, 1975)

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

Descriptors—\*Adult Characteristics, \*Adult Counseling, \*Adult Education, Counseling Effectiveness, Counselor Attitudes, Counselor Functions, \*Counselor Role, \*Educational Needs

"Counseling adults is the most impoverished, depressed, but developing area in the entire area of adult education." This is due to: (1) a lack of serious commitment by the educational community, (2) a lack of adequate literature, and (3) a lack of clear-cut role distinctions. The limited number of research studies on counseling adults conclude that more progression is found among counseled groups than noncounseled groups and that existing guidance services for adults are inadequate to meet clientele needs. The essence of counseling is the relationship between counselor and client which places emphasis on the client's perception of his/her environment. The role of a counselor may be clarified by examining what tasks counselors of adults perform or by studying the competencies identified as needed for counseling in adult education. Of basic importance in counseling adults is to understand the needs of adults. Moreover, adult students bring many anxieties, over and above those in any learning situation regardless of age or level, to the learning situation. Another consideration is counselor attitudes toward the adult counselee which can influence the counseling process. Abraham Maslow's explanation of self-actualization is recommended as an ideal model for counselors when dealing with adults. (EA)

**Acquisition of a Psychomotor Skill Using Simulated-Task, Augmented Feedback (Evaluation of a Welding Training Simulator).**

Navy Personnel Research and Development Center, San Diego, Calif.

Report No.—NPRDC-TR-75-13

Pub Date Oct 74

Note—29p.; One page of photographs removed as it would not reproduce in microfiche; For related document, see ED 102 361

**EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage**

Descriptors—\*Comparative Analysis, Psychomotor Skills, Reinforcement, \*Simulation, Simulators, Skill Development, Task Performance, \*Teaching Methods, \*Welding

The research was conducted to determine if a physically complex, continuous, three-dimensional psychomotor skill could be acquired more efficiently with simulated-task, augmented feedback than with the feedback normally provided

by performing the task itself. The specific skill selected for the study was shielded metal arc welding because it is representative of this class of skills. Thirty-six inexperienced welding trainees were gathered: 18 were assigned to an experimental group and alternated their time equally between the simulator and the weld shop; the other 18 were assigned to the control group and received conventional welding practice only. After 12 days of training their performance was evaluated based on visual grading of the vertical and overhead test. The following conclusions were reached: the simulator trainees performed significantly better than the conventionally trained group, and the simulator trainees also used 215 times less electrical energy, less welding material, and spent approximately half as much time in the weld shop. A list of references is included in the document. An analysis of the welding skill development and the analysis of variance tables are appended. (Author/EC)

**Descriptors—**\*Adult Education, \*Adult Education Programs, Adult Learning, Career Planning, Educational Objectives, \*Professional Continuing Education, Program Evaluation, \*Workshops

**Identifiers—**\*Hartford Graduate Center

An examination of the Hartford Graduate Center was the focus of a workshop designed to: (1) study its goals for continuing education programs for working professionals, (2) analyze a proposed approach for accomplishing these goals, and (3) assess how the knowledge and resources of continuing education can be most effectively used. Participants considered areas of human conditions, learning environments, and technical resources as they influence the ongoing graduate-level education of professionals. The report is divided into two sections: workshop discussions and excerpts from group discussions, and observations and suggestions for action. The workshop discussions are arranged according to eight interrelated topics: the role of the Hartford Graduate Center, determining what should be learned, professional career planning, adult learners, managers of learning resources, media and delivery systems, top management and continuing education, and measuring and evaluating learning. Each discussion is comprised of a summary statement and selected statements from the recorded comments of the participants. A synthesis of findings and conclusions about the center, the center's program, the faculty, the learner, and cooperation with industry are provided in the latter section. A list of participants, statement of goals of the center, and a workshop prospectus and agenda are appended. (Author/EC)

A description of the curriculum dissemination system of the New Jersey Curriculum Management Center (NJCMC) is provided for the use of educators needing these services and for other states who wish to establish similar curriculum dissemination systems. As a curriculum management center in the National Network for Curriculum Coordination in Vocational-Technical Education, the NJCMC is responsible for curriculum dissemination to the states of northeastern United States. The services they offer and procedures for acquiring these services are described. These include the distribution and sales of Vocational-Technical Curriculum Laboratory publications, microfiche duplication and reproduction of curriculum documents, conduction of workshops on curriculum resources and Curriculum Microfiche Collection services, newsletters, and the operation of booths and exhibits at conferences. Materials are obtained from ERIC, the other five CMC's of the national network, states of the northeastern network, curriculum development projects in New Jersey, and career education projects across the nation. A 25-page appendix includes a reference materials index, vocational subject index, academic subject index, and occupational cluster index. The indexes are keyed to the concluding 15-page bibliography which presents the career-related Curriculum Microfiche Collection titles, organized alphabetically by state. (Author/EC)

**Identifiers—**Army, Supplyman

As part of the Army's adoption of performance-oriented instruction in Army Training centers, a study was conducted to determine the feasibility of using self-paced instruction without programed texts in a clerical and computational skills course. Course organization, course management, and effective instructional techniques for self-paced training were the principal areas of study. A seven-week Supplyman course was selected for the experiment. There were 19 performance tests for the course, each constituting a station at which an instructor provided an overview of the material and information on where the required reference documents and practice materials were located. Students were allowed to take each of the 19 Supplyman performance tests whenever they felt qualified to do so. Performance and attitude data were collected on approximately 135 baseline (lock-step) students and 200 self-paced students. Findings indicate the self-pacing is feasible to implement and operate, can be used effectively in cognitive skill training, and is well-received by students and instructors. Appended are two student attitude surveys with responses statistically expressed, one instructor information questionnaire with response scores, and another instructor questionnaire for which responses are not shown. **Nontraditional Occupations for Women of the Hemisphere: The U.S. Experience.**

Employment Standards Administration (DOL), Washington, D.C. Women's Bureau.

Pub Date 9 Aug 74

Note—70p.; Report on the Conference for Women of the Hemisphere on Nontraditional Occupations and Career Opportunities—The United States Experience (Washington, D.C., August 9, 1974)

**EDRS Price MF-\$0.76 HC-\$3.32 Plus Postage**

**Descriptors—**Career Choice, Career Opportunities, Career Planning, Change Strategies, Conference Reports, \*Employment Experience, \*Employment Opportunities, Equal Opportunities (Jobs), Government Role, Organizations (Groups), \*Sex Discrimination, Social Change, \*Speeches, \*Working Women

Edited versions of speeches presented at the conference are presented in the document. Section I, Women in the Fields of Government, Education, Trade Unions, Business and Industry, presents personal accounts of women in nontraditional occupations. Speakers include Betty Southard Murphy, Lucille Maurer, Barbara G. Kilberg, Ruth Weyand, Julia M. Walsh, and Eva S. Poling. Section 2, The Role of Government, Non-Government Organizations and Voluntary Associations in Promoting Nontraditional Training and Employment Opportunities for Women, highlights steps taken in the United States to promote employment opportunities for women. Speakers include Mary N. Hilton, Pearl Spindler, Sandra K. Carruthers, Dorothy B. Ferebee, Agnes

M. Dill, and Mary Hallaren. Audience reaction in the form of questions to the speakers, a preface, biographical notes, and opening remarks by the Secretary and the Undersecretary of Labor are included. Major themes are outlined, and ways women can enter previously closed fields and how nontraditional occupations can be promoted are suggested. A list of conference participants and materials distributed to them are appended. (LH)

 Note—146p.

**EDRS Price MF-\$0.76 HC-\$6.97 Plus Postage**  
**Descriptors—**\*Accident Prevention, Alcoholism, Driver Education, Law Enforcement, Performance Factors, Program Content, Program Costs, Program Descriptions, \*Program Effectiveness, \*Program Evaluation, State Programs, \*Statistical Analysis, Statistical Data, Statistical Studies, Tables (Data), Traffic Accidents, Traffic Regulations, \*Traffic Safety, Trend Analysis  
 A nationwide systematic approach to assess the developments and achievements of highway safety activities was conducted to measure program outputs from 1969 through 1974 using key indicators of performance such as ratios and percentages. A sample of 10 states was selected with overall sample of 105 local jurisdictions which would provide estimated national highway safety trends. Several criteria were used as the analytic base for the interpretation of national results: trends in program performance (resources, activities, and outputs) matched against growth in numbers of licensed drivers, vehicles, road mileage, and miles of highway travel; program productivity in terms of outputs per unit or manpower time; trends in unit cost; and direct and indirect effects of state and community grants. Summaries of findings are given for the following program areas selected for study: (1) the funding of highway safety programs, (2) police traffic services and adjudication, (3) drinking-driver countermeasures, (4) emergency medical services, (5) driver education, (6) driver licensing, and (7) periodic motor vehicle inspection. Making up the bulk of the document (99 pages), key statistics and an extensive statistical analysis are presented for each of the program areas. A list of state and local contacts is included. **A Systems Design for Classification and Utilization of Indian Adult Education for Development Purposes.**

Pub Date 7 Jul 75  
 Note—16p.; Paper presented at Seva Mandir (Rajasthan, India, July 7, 1975)

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**  
**Descriptors—**\*Adult Education, Classification, Continuous Learning, \*Developing Nations, Educational Change, Educational Objectives, Educational Strategies, \*Indians, Individual Development, \*Nonformal Education, Program Administration, Program Content, Program Coordination, Program Evaluation, \*Systems Approach

There is a growing recognition in India of the significant role nonformal adult education can play in achieving national and individual developmental objectives. Traditional formal education with its greatest benefits for a small elitist group will not contribute significantly toward the resolution of major socioeconomic problems. Adult education is an important existing strategy that can be further developed as a major nonformal strategy. Currently, adult education is beginning to assume two major new role tasks, as lifelong education for all levels of society and as a major component in education for developmental strategies. A limitation of adult education, however, is the lack of an organizational framework to systematically build and improve operations. The systems classification of this proposal would provide classification for self-analysis, gathering, classifying, evaluating, and diffusing information about adult education programs in India. The model includes: (1) Identifying Characteristics (organization/administration, program objectives, and time allocation); (2) Setting (needs assessment, culture/economic/civic/scientific context,

and other area programs); (3) Program Structure and Function (facilities, philosophy, personnel, clientele, curriculum, and processes); and (4) Output: Evaluation and Feedback (pre- and post-tests, interviews, questionnaires, on-the-job records, research, cost/benefit analysis, internal/external efficiency, and feedback). **Identifiers—**\*Concept Inventories

A methodology for inventorying the technical concepts relevant to the occupations of automotive mechanics, business data programmers, and general secretaries is described in the report. Five general types of technical concepts are presented, consisting of specialized knowledge having practical use to workers. Through a process of development, editing, and review, these general concepts resulted in a listing of 440 concepts for automotive mechanics, 382 concepts for business data programmers, and 80 concepts for general secretaries. CSR (Concept Significance Rating) booklets for each occupational area containing these listings were sent to selected occupational instructors to obtain their ratings of the job significance of the concepts. Usable returns were obtained from 104 instructors in seven states. Summaries of the ratings obtained for each occupation are presented, along with methodology, rationale, and description; an explanation of the process involved with compiling and rating the concepts; and a summary and implications. Tables supplement the discussion. Ratings for the three occupational areas, additional concepts suggested by instructors, and the CSR booklet are appended. It is stated that summaries of the ratings obtained may be useful to those involved in curriculum development and research, and occupational performance surveys that derive or validate training content. **Descriptors—**\*Auto Body Repairs, Course Content, \*Curriculum Guides, Evaluation Criteria, \*Instructional Materials, Learning Activities, Post Secondary Education, Secondary Education, Student Evaluation, \*Tests, \*Trade and Industrial Education, Unit Plan

The guide contains 11 sections, each consisting of one or more units of instruction designed to provide students with entry-level skills in auto body repair. The sections deal with: introductory and related information; body and frame construction; tools; welding; basic metal repair; hardware, glass, and trim; major metal repair; refinishing; damage estimating; and miscellaneous topics. Each unit includes performance objectives stated as terminal objectives, indicating the subject matter to be covered, and as specific objectives for student performance. All units contain suggested student and teacher activities, information sheets providing the essential content of the unit, tests with answers, and a reference list. Many of the units also have transparency masters, student handout sheets, job sheets designed to teach a skill, and assignment sheets to provide paper and pencil activities. Numerous illustrations are included on the assignment and job sheets, tests, and transparency masters. Progress charts, with

predetermined levels of accuracy for evaluating skill attainment, are provided after each major section and contain a listing of all the tasks for which job sheets are included in the units. (Author/MS)

**Musick Career Curriculum Development Study: A Study of the Relationship of Curricula to Employment.**

Wisconsin College-Conservatory, Milwaukee.  
 Spons Agency—Office of Education (DHEW), Washington, D.C.

Note—55p.

**EDRS Price MF-\$0.76 HC-\$3.32 Plus Postage**

**Descriptors—**Career Education, \*Curriculum Development, Curriculum Evaluation, Educational Needs, Employment Opportunities, \*Music Education, Musicians, \*Questionnaires, \*Relevance (Education), Student Opinion, \*Symposia

A program to investigate the curriculum available to students in the independent conservatory in terms of future employment is discussed in the document. Three groups of students, from the Wisconsin College-Conservatory, the New England Conservatory, and the San Francisco Conservatory, were interviewed and asked to complete a questionnaire. Forty-three professional musicians responded to a questionnaire, most of them from the Milwaukee area. A symposium was conducted which involved students, music teachers (both private and school affiliated), music association representatives, members of the Milwaukee Symphony Orchestra, and other music professionals. The three workshops, headed by professionals from outside the Milwaukee area, focused on preconservatory education, curriculum, and careers. Dialogue with students and questionnaire results are presented. Conclusions cover a variety of areas, including: (1) the suggestion that conservatories are providing vocational training, (2) curriculum development, (3) the need for stronger humanities programs, and (4) other educational needs. Recommendations suggest a broader study, with a stronger questionnaire and more developed interviewing techniques. The student and professional musician questionnaires and the symposium announcement are appended. (LH)

Identifiers—Army

The specific objective of Work Unit ATC-PERFORM was to provide technical research and development assistance to the Army agencies involved in the review, evaluation, and refinement of performance-based training techniques in Army Training Centers. It continued and extended the Army's effort to accomplish major training innovations that had been initiated in 1971-72, during conversion to an all-volunteer status. A brief background to Work Unit ATC-PERFORM is provided and an overview of the work unit's activities and priorities is sketched. The report describes the work unit's activities and accomplishments in basic training, advanced individual training, advanced individualized training (combat support), self-pacing individualized instruction, and Reserve and National Guard training and noncommissioned officer leadership/instructor training. Performance training and testing principles and techniques in those areas were instituted and reflected in Army training documents, pamphlets, instructional and assessment materials, and Army staff policy decisions. Descriptors—Educational History, \*Educational Legislation, \*Equal Education, \*Females, Public Education, \*Sex Discrimination, State Boards of Education, State Legislation, Tables (Data), \*Vocational Education

Identifiers—\*Massachusetts

The study has presented a case history of the evolution, passage, and early implementation in vocational education of a Massachusetts law, the first of its kind in the country, designed to counter practices and policies in public education which resulted in students receiving different treatment solely on account of their sex. Analysis of the Federal and State legislative history from 1906 until the present has revealed that early legislation encouraged the separation of vocational programs by sex as a way of meeting what was then viewed as the special needs of girls. Later legislation continued this separatism, leading to the isolation of vocational education programs for females. Analysis of the data pertaining to Massachusetts' vocational education has clearly demonstrated the existence of a separate system of education in which females have not participated equally with males. The study recommends a series of corrective actions which the State Board of Education could undertake. The 90-page appendix contains separate system data from localities and regions, supplementary documents (student questionnaire, Chapter 622 recommendations/regulations/policy statements and educational specifications in response to Chapter 622), and selected references. Individualizing Vocational and Technical Instruction.

Pub Date 75

Note—244p.

Available from—Charles E. Merrill Publishing Company, 1300 Alum Creek Drive, Columbus, Ohio 43216 (\$12.95)

Document Not Available from EDRS

Descriptors—Course Objectives, Evaluation, \*Individualized Instruction, Student Ability, Task Performance, \*Teaching Methods, Teaching Procedures, \*Teaching Techniques, \*Technical Education, \*Vocational Education

The book's focus is on classroom procedures that allow an instructor to meet the needs of in-

dividuals while managing the learning activities of a group. The individualized instruction model that seems most appropriate for use with vocational programs is the fixed-content, variable-time, mastery model in which individuals are assisted in developing the skills and knowledge required to succeed at entry-level jobs in an occupation. Following an introductory chapter, Chapter 2 discusses methods for establishing vocational/technical program content, while Chapter 3 is directed toward identifying student instructional prerequisites for courses and specific tasks. Chapter 4 deals with the development of vocational instructional objectives (terminal performance objectives and intermediate performance objectives), based on job descriptions and task analysis. Instructional strategies, instructional media, and educational computer technology are discussed in Chapter 5. Chapter 6 covers methods of evaluating student progress in an individualized learning system. The concluding chapter recognizes the demands for "open access" and "accountability" as bringing increased pressure for individualizing vocational instruction programs. Appendixes include: sample job descriptions, sample differentiated staffing job descriptions, the National College Verb List, and a learning guide. (EA)

Descriptors—\*Apprenticeships, Business Responsibility, \*Graphic Arts, National Programs, \*Standards, Training Objectives

Set forth in the booklet are the national apprenticeship and training standards for the training of lithographers, photoengravers, gravure workers, bookbinders, and finishers as developed and recommended by the Graphic Arts International Union in cooperation with the Bureau of Apprenticeship and Training, U.S. Department of Labor. The objective of the standards is to provide a common basis for the mutual undertaking of training which will benefit employers, employees, and the public. Their purpose is to improve the quality and opportunity of craft workers through the establishment of uniform training programs. In addition to itemizing the various provisions of the national standards, the booklet contains an explanation of the application of the standards for the guidance of employers and labor representatives. Descriptors—Airports, Cost Effectiveness, \*Educational Programs, \*Job Training, Performance Criteria, Personnel Selection, \*Professional Training, Program Budgeting, Quality Control, Simulators

Identifiers—\*Air Traffic Controllers

The report reviews the evolution of existing national programs for air traffic controller training, estimates the number of persons requiring developmental and supplementary training, examines present controller selection and training programs, investigates performance measurement methods, considers standardization and quality control, discusses the capabilities and limitations of existing simulation devices for air traffic controller training, and identifies and compares on a cost basis developmental training alternatives. It also considers: simulators and centralized and noncentralized training, the training budget, fu-

ture requirements of training, research and development for training, hiring practices, and the training load at the Federal Aviation Administration Academy. Over 200 pages of the document consist of the following appendixes: statement of work; field facility survey on training; simulation for air traffic controller training; selection of air traffic controllers; performance measurement in air traffic control; review of present training; cost analyses of air traffic controller training, FY 1974, and of alternative training methods; alternative developmental training programs; and budgetary and fiscal control training. Identifiers—\*Arizona (Mesa)

A description of the General Work Education Program developed for high school students in the Mesa Public Schools and procedures for its implementation are discussed in the document. The program provides students with an opportunity to gain occupational knowledge through two basic approaches: (1) work exposure, including formal observation of a career setting with limited involvement, verbal interaction, and/or participation; and (2) work experience, involving the student in a work setting for an equivalent of one hour per day for a nine-week period. Piloted during the spring semester of 1974, the program was offered by 18 teachers to approximately 540 students. Teachers screened and sponsored interested students, who enrolled in a nine-week course, receiving one-fourth credit toward graduation. Community Resource Service, the teacher, and CO-OP staff cooperated in identifying and contacting suitable placement agencies, which in turn made arrangements with a suitable work station. Forms used to implement the program include a parental permission form, pre- and postwork exposure forms, cooperating agency evaluation forms, and student information request for placement forms. These are appended with an executive summary work education proposal for the program. (LH)

The trainer-directed manual describes a 45-minute school staff orientation session of not more than 30 participants discussing why people work and the influential role school can play in formulating student perceptions of work. The purpose, activities, outcomes, duration, setting, resources needed, and pre-session activities and preparation are presented. The script for the session takes up the bulk of the document and is di-

vided into four parts, with procedures and directions for each part provided. A tape/slide presentation of workers giving their own reasons for working and the film "Leo Bauerman" provide a focus for the discussion. Three activity sheets and overlays provide further stimulus. The script for the tape/slide presentation, the three activity sheets, three overlays, and evaluation sheets for the presentation are appended. Developed by the Mesa Public Schools, the program is in its preprint stage and is subject to revision. (LH)

The trainer-directed manual describes a 45-minute school staff orientation session of not more than 30 participants in which individual independence and societal interdependence, in terms of leisure time activities, are discussed. Classroom implementation of this concept is then explored. The purpose, activities, outcomes, duration, setting, resources needed, and pre-session requirements are stated. The script for the session is presented, with procedures and directions included. A tape-slide activity identifying the desirability of participating in leisure-time activities provides a focus for the discussion. Three activity sheets and overlays are also used. Participants list five leisure-time activities and, through activity sheets, actual participation time and the number of people needed to support the leisure-time activity and their pay are determined. Three routine school activities involving field trips, lunch, and football games are then explored in similar terms. The activity sheets and overlays are appended along with a postsession reaction sheet and an evaluation form. Developed by the Mesa Public Schools, the program is in its preprint stage and is subject to revision. (LH)

**Identifiers**—World of Work

The trainer-directed manual describes a 45-minute school staff orientation session of not more than 36 participants in which the potential of the classroom for teaching the interdependence of society as revealed through the world of work is explored. The purpose, activities, outcomes duration, setting, and resources needed are stated. The script for the session is with procedures and directions supplied. Working in groups of six or less, participants list the occupations of family members and consider their evident interdependence. Total group interdependence is determined, and parental information request forms are completed. A career tree with 12 occupational areas is constructed, and participants place parental information forms in the proper occupational areas on the tree. Overlays

and activities supplement the discussion and include a graduated classifying diagram, occupational cluster definitions, participant's occupational and family information forms, and worker trait components. These are appended along with evaluation and postsession reactions forms. Developed by the Mesa Public Schools, the program is in its preprint stage and is subject to revision. (LH)

**Identifiers**—Missouri (University City)

The final report of an 18-month project in University City, Missouri, to develop junior and senior high school components centered on career education, and a guidance and counseling component for both levels is presented. An Alternative High School was established, with students pursuing career education and academic core subjects; career awareness courses were developed for use in the junior high school. Evaluation through process-documentation and analysis of pre- and post-tests found the junior high program generally successful, and the Alternative High School results mixed in their impact. An outlined discussion of the problem area and project goals, objectives, design, procedures, and results are presented. Measurement and analysis of component objectives, and outcomes for students in the Alternative High School are discussed, including case histories of 14 students. A third party evaluator's conclusions and recommendations are summarized, stating that the guidance component was the most effective component in achieving both process and outcome objectives, but that the project was least successful in its primary purpose—student career development. Tables supplement the discussion. Behavioral objectives, course descriptions for the Alternative High School and descriptive data on its student population, curriculum review inventory, and attendance records are appended. (LH)

A project in adult basic education was established in the Model Neighborhood of Wilmington, Delaware. A delivery system of services using paraprofessionals was created to give eligible adults individualized instruction in their home or a nearby center. The results showed that most of the project enrollment and performance objectives were met. Data are provided regarding: enrollment data, an education opinion instrument administered to 69 students at the end of the project period, a wide range achievement test to determine the amount of progress in the areas of spelling, math, and reading, and a list of student activities. Instructional materials used by staff

members were chosen according to the needs of individuals. Some of the materials are listed, rated, and evaluated. Problems encountered in the project were constant turnover of paraprofessionals, transportation of students, enrolling students in driver's education classes who did not possess functional English skills, and retaining and recruiting. Excerpts from a third-party evaluation provide information related to the procedures used in the project, a final evaluation questionnaire administered to the staff, an analysis of the project operations, and interview questions to determine extent of student participation. The project was termed "an exciting, rewarding, and successful program." (Author/EC)

**Adult Functional Competency: A Summary.**

Texas Univ., Austin. Div. of Extension.

Pub Date Mar 75

Note—30p.

**EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage**

**Descriptors**—\*Adult Characteristics, Adult Education, Adults, Basic Skills, Daily Living Skills, \*Functional Illiteracy, Individual Needs, \*Knowledge Level, National Competency Tests, \*National Surveys, Performance Criteria, Performance Factors, Performance Tests, \*Success Factors

**Identifiers**—Adult Performance Level, APL

The Adult Performance Level (APL) project summary specifies the competencies which are functional to economic and educational success in society and describes devices developed for assessing those competencies. The APL theory of functional competency identifies adult needs in general knowledge areas (consumer economics, occupational knowledge, community resources, health, and government and law) and in primary skills (communication skills, computation skills, problem solving skills, and interpersonal relations skills). The APL project methodology involved the following activities: specification of competencies, development of performance indicators, field test and subsequent revision, national assessment of competency, and determination of competency levels. Three APL levels are identified: APL 1—adults functioning with difficulty, APL 2—functional adults, and APL 3—proficient adults. An APL national survey (five samples totaling 7,500 adults) on functional competency reports the competency levels of adults according to knowledge and skill areas and demographic groupings, with 20% falling in the APL 1 category. Additional performance data related to general knowledge areas and primary skills are provided. Possible methods for APL implementation and dissemination in the classroom, local program, State, and national levels are suggested as well as its implications for elementary and secondary education. Appended materials in-

clude additional notes on APL goals, objectives, and tasks. (Author/EC)

Identifiers—Arizona (Pima County)

Information for prospective employers of students involved in a work education program sponsored by the Pima County Developmental Career Guidance Project is presented in the document. Two of the project's programs are described: (1) Work Exposure, aimed at providing seventh through twelfth grade students with an opportunity to observe on a job site for approximately 10 hours, with some participation, no pay or credit, and classroom followup and (2) Work Experience, aimed at providing tenth through twelfth grade students with an opportunity to spend approximately eight hours per week for about three-quarters of a school year on the job, with pay and credit possibilities. Child labor laws for the State of Arizona, job limitations, student I.D. cards, and insurance are discussed. Participating schools will provide a pretraining program, determining the student's interests and abilities. The project center will locate job sites, schedule interviews, and conduct pre- and postevaluations. A school sponsor will regularly visit the work site. Work Experience programs will require employer and student evaluations. Sponsor and evaluation forms and an employer expectations list are included. (LH)

Identifiers—WAC, \*Womens Army Corp

The introduction of performance-oriented instructional procedures into Women's Basic Training (BT) at Fort McClellan and the revision of Army Training Program 21-121 to incorporate the philosophy and principles of performance-oriented training are described in the document. Results from a questionnaire regarding duties, activities, and attitudes of a representative worldwide sample of 1,573 first-tour enlisted women as reported by themselves and a representative sample of 156 of their supervisors provided data for the performance-oriented program development. The objectives and development of the questionnaire and program are discussed and questionnaire data is summarized. Major findings indicate that the majority of BT graduates have a high education level, find BT and subsequent assignments different from what they expected, and report a lack of correlation between BT-taught knowledge and assignment task requirements. Tables supplement the discussion. Appended materials takes up two-thirds of the document and include major briefings, locations surveyed, questionnaire and interview forms, questionnaire instructions, and results. This effort was undertaken as a part of the Army's current program to utilize increasing numbers of women in meeting its operational requirements, as well as an attempt to develop modern training technology in Women's BT. **An Analysis of Vocational Education in Danbury, Connecticut, 1969-1970; An Application of Systems Analysis to Educational Programs, Locations, and Benefits. (Emphasis on Danbury High School).**

Pub Date May 72

Note—33p.

**EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage**  
 Descriptors—\*Cost Effectiveness, Educational Research, Input Output Analysis, \*Program Costs, Program Effectiveness, Program Evaluation, \*Senior High Schools, \*Systems Analysis, \*Vocational Education

Identifiers—Optner Model

The author combined cost-benefit analysis with systems analysis, using the Optner model, to analyze the vocational education program in Danbury, Connecticut (a demonstration city), in 1969-70 and 1970-71. Background information on the community and the program's development are related; the analysis is presented in summary, illustrated by figures, tables, and computational exercises. The model conceptualizes the educational program as a productive system within a dynamic social systems framework. Dollar amounts were assigned to input and output phases: a return of \$432,020 (earned by those students who became employed in an area related to their training during 1969-70) represents 124 percent of the input monies allocated for vocational education in Danbury during the same year, and represents the earnings of less than half the vocational education graduates for that year. Other findings were that the cost of vocational education decreased relative to the costs of educating students in the regular school program, and that the Optner model is a powerful analytical tool. The author concludes that the recent trend away from academic pursuit as a primary educational purpose has been a reaction to various dysfunctional societal symptoms, not a response to a vision of educators; their commitment could erase vocational education's stigma. (Author/AJ)

 Identifiers—California (Alameda County), \*California (Area V), California (Contra Costa County)

The document presents a directory of vocationally oriented educational programs which already exist in Alameda and Contra Costa Counties, California. It is hoped that the inventory will permit improved planning for future programs and greater utilization and coordination of present ones. Listings include: Directory of Educational Agencies, with program information on address, telephone, accreditation and approval, financial aid, handicapped and disadvantaged, placement, admission requirements, and follow up; Programs by Sponsor, with programs listed alphabetically by sponsoring institution and including the United States Office of Education (USOE) identification number, followed by the titles of the programs; and Programs and Courses, presenting a clustering of all programs of one type together under the USOE number, with the sponsors listed in alphabetical sequence within the cluster, followed by program information regarding skill level, length of program, instructional methodology, student enrollments and completions, tuition and other costs, documents awarded and data date. Introductions to each section of the directory provide necessary information for their use, and implications for further study and the utilization of the inventory through remote terminals is discussed. Alphabetical and numerical indexes of USOE program titles are appended. (LH)

Identifiers—California (Alameda County), \*California (Area V), California (Contra Costa County)

Ten problem areas identified by the State Legislature of California in regard to vocational education are reviewed in terms of Alameda and Contra Costa Counties, California. The problem areas are discussed in terms of present status and required direction and specific activities needed to achieve objectives. They include: (1) assessment of opportunities for vocational education, including financing vocational opportunities, funding procedures, organization of labor market information, and vocational discrimination practices; (2) quality standards, including vocational competency, occupational analyses for teaching, vocational instructional packages, certificates, instructional costs, and financial incentives for quality; (3) followup, including comprehensive monitoring system; (4) prevocational education, including curriculum; (5) vocational guidance, including vocational competency—self guidance and vocational counselors; (6) dual attendance, including college credits for college work; (7) advanced placement, including vocational competency evaluation; (8) remedial programs, including evaluation; (9) work experience, including promotion, work experience credits and education placements, and training of teacher-coordinators; and (10) informing the public, including coordination of public information activities. The Area Five Planning Committee members and evaluation and participation form to be filled out in response to the document are appended. (LH)

**Identifiers**—California (Alameda County), \*California (Area V), California (Contra Costa County)

Conclusions and recommendations regarding the development of an Area Master Plan to provide maximum coordination between vocational, technical, adult, and continuing education agencies within Alameda and Contra Costa Counties, California, are presented. The Area Five Planning Committee, which developed the Master Plan, based its evaluation and study on the Education Code for vocational areas, as stated by the California Legislature. Data from numerous sources was collected and reviewed, educational surveys were developed and conducted, and students, educational personnel, and members of the general public were interviewed. The socioeconomic setting of the two county area is described. Discussion of the conclusions and recommendations makes up the bulk of the document, and is arranged in five groups with tables supplementing the presentation: (a) Curriculum—Programs, including program planning and coordination; (b) Related Services, including guidance and counseling, follow-up, cooperative and work experience, and remedial programs; (c) Quality Standards; (d) Articulation, including advanced placement and dual attendance; (e) Public Image; and (f) Business Services, including finance, accounting system, and justification procedures. A consolidation of the recommendations is provided. Planning Committee members, State of California Education Code, Article 10.4, Committee Work Plan, and a bibliography are appended. (LH)

**Descriptors**—\*County Programs, Educational Programs, Program Development, \*Program Planning, Research Committees, State Legislation, \*Vocational Education

**Identifiers**—California (Alameda County), \*California (Area V), California (Contra Costa County)

A review of the Area V Planning Committee's study and evaluation of vocational education programs in Alameda and Contra Costa Counties, California, is presented. Three generalized problem areas were addressed, including: (1) financial support for needed programs; (2) the development of new programs and the evaluation of old ones; and, (3) the lack of a system to coordinate programs and encourage school district cooperation. Problems encountered by the committee included confusion as to the appropriate roles for the committee, its members, and agencies in terms of the area planning process. The adequacy of and accessibility to planning information and financial support for the planning program were also problem areas. Conclusions and recommendations are presented, emphasizing: coordination between vocational education programs, financial support from the State government to help implement educational and manpower information systems, the establishment of a monitoring system for vocational education program status and planning, and regulatory measures. A complete listing of the Committee recommendations and their present status, committee members, and Article 10.4 of the California Education Code are appended. The document is one of a series regarding Area V. (LH)

**Descriptors**—Agency Role, \*Delivery Systems, \*Evaluation, Evaluation Criteria, \*Evaluation Methods, \*Handicapped, Human Services, Psychometrics, Vocational Counseling, \*Vocational Rehabilitation

**Identifiers**—\*Vocational Evaluation

The first of three parts of the Vocational Evaluation Project final report contains an editorial, two task force reports, and brief summaries of the seven task force reports which comprise the final report. The editorial summarizes the project's purpose, its activities for the three years of its existence, and its results, and describes the task force reports' strength as lying in the high degree of practitioners' research that they demonstrate. The first task force report, Vocational Evaluation Services in the Human Services Delivery System, (1) describes vocational evaluation as a component of a delivery system; (2) outlines the general characteristics of the manpower service delivery system; (3) describes vocational evaluation as an alternative assessment service; (4) outlines the goal and objectives of vocational evaluation services; (5) describes the delivery of vocational evaluation services; and (6) discusses barriers related to: agency structure, personnel, philosophy, communication, and referral. The second task force report, The Tools of Vocational Evaluation, discusses three categories of vocational evaluation tools: situations as tools (on-the-job evaluation, work samples, and psychometrics); resource tools (occupational information, client information, and audiovisual materials); and applied tools (interview, observations, and reports). The second task force report also discusses tool accountability and proposals on professional action. (Author/JR)

**Identifiers**—\*Vocational Evaluation

Part 3 of the three-part Vocational Evaluation Project final report contains brief summaries of the seven task force reports which comprise the final report and three such task force reports. The report of task force 4, The Evaluation Team Approach to Vocational Evaluation, describes the multiple roles an evaluation team must play in the vocational evaluation process, approaches which might be taken in order to develop the acceptance of the evaluation team, and ways in which evaluation teams could be trained. The report of task force 3, The Vocational Evaluator, describes the different roles and functions required of the professional evaluator, the necessary knowledge and skills, and the training required to develop them. This report also proposes a series of studies aimed at developing a definitive career ladder for the field of vocational evaluation. The report of task force 6, The Relation of Vocational Evaluation to Organizations and Educational Institutions, examines the extent of national organizations' and Federal agencies' recognition of the field of vocational evaluation and the facilities for training the vocational evaluators who will be necessary to upgrade the field. The handbook for special education personnel was written by 18 graduate students culminating a period of intensive work with physically and mentally handicapped adults at workshops operated by the Pennsylvania Association for Retarded Citizens and the Easter Seal Society. The first chapter details the steps from contract procurement to work completion for a sheltered workshop, providing information on workshop organization, time studies, bids, foreman or work supervisor's duties, training procedures, safety, and productivity and reevaluation. Chapter 2 outlines problems in occupational placement and suggests some ways to overcome them. Criteria and methods for evaluating occupational and community living skills are presented in Chapter 3, which also contains vocabulary lists of functional words related to work and to the use of tools. Task analyses, educational and skill prerequisites, and descriptions of 10 job experiences by workshop participants are provided in the fourth chapter. The final chapter describes four additional jobs and the tasks they require. A brief list of information sources concludes the handbook. (MS)

The guide contains 11 sections, each consisting of one or more units of instruction in commercial carpentry. The sections cover the following: introduction (orientation, safety, and applying for a job), leadership, related information (lumber, measuring, and fasteners), power and hand tools, blueprint reading, site preparation and layout, forming, framing, exterior finish, interior wall finish, and interior trim. Each unit is based on behavioral objectives stated in two forms: terminal objectives stating the subject matter to be covered, and specific objectives stating the necessary student performance. Suggested teacher and student activities, information sheets providing the essential content, reference lists, and tests with answers are included for each unit. Many of the units also contain transparency masters, student handout sheets, job sheets designed to teach skills, and assignment sheets (with answers) providing paper and pencil activities. Illustrations are numerous throughout the guide. Progress sheets after each section can be used by students and teacher to record test results and acceptable performance of skills outlined in the job sheets. (Author/MS)

**Overeducation and Jobs: Can the Great Training Robbery be Stopped?**

Pub Date Aug 75

Note—12p.; Paper presented at the annual convention of the American Psychological Association (83rd, Chicago, Illinois, August, 1975)

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

**Descriptors**—\*Educational Background, \*Employment Qualifications, \*Employment Statistics, \*Job Satisfaction, \*Labor Force, Promotion (Occupational), Role Conflict, Self Esteem, Tables (Data)

**Identifiers**—\*Overeducation

In recent years, researchers have been questioning the assumption that more education necessarily guarantees workers greater occupational payoffs. This study examines overeducation in the American work force in terms of its frequency; segments of the work force in which it is most common; its relationship to job dissatisfaction, low self-esteem, and depressed mood; and the effects of reinforcement from the worker's environment on the overeducated worker. Data were collected in 1973 from a national probability sample of people 16 years old or older, living in households, and working for pay at least 20 hours a week. Workers were interviewed regarding overeducation, job satisfaction, self-esteem, depressed mood, promotions, and skill shortage. Findings indicated that 27 percent of the American work force felt their level of formal education exceeded that needed by people in their jobs, and 19 percent felt their education was less than that needed. Overeducated workers were significantly more likely to be dissatisfied with their jobs, to have low self-esteem, and to experience depressed mood. Occupational role strain was greatest when the worker was both overeducated and either had never been promoted or did not perceive a shortage of people with his/her skills. (EA)

**ED 114 624** **CE 005 489**  
**Workweeks of 41 Hours or More and Premium Pay.**

Bureau of Labor Statistics (DOL), Washington, D.C.

Pub Date Sep 75

Note—8p.; Summary, Special Labor Force Report

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

**Descriptors**—Blue Collar Occupations, \*Census Figures, \*Employment Statistics, Industry, \*Labor Force, Occupations, \*Overtime, Tables (Data), Union Members, White Collar Occupations

The survey conducted in May, 1975 by the Bureau of Census showed that both the number of employees working more than the standard 40-hour workweek and the number receiving premium pay for hours in excess of the standard were substantially fewer than in the previous year. About 14.1 million wage and salary employees worked overtime in May, 1975 (down 2 million from 1974) and about 5.1 million of them (down 1.6 million from 1974) received overtime pay for those hours. The changes were linked to the decline in economic activity beginning in late 1973. The goods industries, accounting for about two-fifths of all employees on extended workweeks in May, 1973, sustained about four-fifths of the employee reduction on long weeks in the following two-year period. In the automobile industry, employees on overtime declined by approximately 70 percent. Overall, the proportion of workers on overtime who received premium pay declined from about 43 percent in 1973 to 36 percent in 1975. Blue-collar workers were more than three times as likely as white-collar workers to receive premium pay. Among overtime workers employed in May, 1975 who received overtime pay, about 70 percent were union members and 30 percent were non-union. (EA)

**Descriptors**—\*Data Collection, \*Followup Studies, Guidelines, \*Manuals, Measurement Techniques, Questionnaires, \*Research Methodology, Tables (Data), Vocational Education, \*Vocational Followup

Field-tested procedures to collect followup data on former students of vocational education programs are described in the document. The procedures presented are designed to facilitate the collection, analysis, and reporting of information on jobs obtained and their relationship to training programs, and the income, geographic mobility, and the satisfaction of former students. The questionnaire data collection procedures, and examples of possible output formats are presented, with eight figures and 22 tables supplementing the discussion. Field-tested procedures included identification of the population, file preparation, the questionnaire, pre-orientation of the population, mailing sequence, sequence of events, and interpretation of data. Advantages and disadvantages of collecting followup data from teachers as opposed to students are discussed. The development phase of a followup of former vocational students in Kentucky includes information on the development of the instrument, data collection, and development of a software package for processing and analyzing the data. This, along with examples of the kinds of output and interpretation which may be generated using these procedures, make up the appendix. (LH)

The McLennan Community College Multi-County Needs Assessment Project's (MAP) survey, assessing the felt and perceived needs, problems, and interests of the local population

relative to education and training programs, is discussed in the document. The Needs Assessment Survey, one component of MAP, was conducted in the central Texas area (Bosque, Falls, Hill, and McLennan counties) during 1974. Survey development and procedures for its implementation are discussed including the interview process, eight objectives, sampling procedures and reliability, and data processing. Senior citizens were trained as interviewers, and field supervision was provided. Sample size was determined at 750 with 20.9 percent of the survey population reporting a need or desire for additional training and education. The discussion is supplemented by tables. Results of the survey are presented through brief analyses, individually by objective, and through a summary. The interviewer's manual, the questionnaire, and tabulated responses are appended and make up over half of the document. The questionnaire responses (89 pages) are tabulated by demographic subgroups. It is hoped that the information presented will prove helpful to potential users of these survey methods and that the data provided will form a common base for adult education decision-makers. (LH)

The McLennan Community College Multi-County Needs Assessment Project's (MAP) survey to identify employer needs is discussed in the document. The Business and Industry Survey, one component of MAP, was conducted in the central Texas area (Bosque, Falls, Hill, and McLennan counties) during 1974-1975. Survey development and procedures for its implementation are discussed, including objectives, data preparation, supervision, administration, and data processing. Interviewers were selected from those who had conducted the Needs Assessment Survey, with training and supervision provided. A total of 127 businesses and agencies responded to the questionnaire; a random sampling technique was not employed. Questions covering general information, employee information, entrance requirements, problems, and supportive education programs were asked. Analysis of findings is presented, with 10 charts supplementing the discussion. A listing of the various businesses, industries, and agencies contacted; the questionnaire; code manual; tabulated responses to the questionnaire; and a listing of local job openings current as of January 1975 are appended. Information and data gained will be used to establish resource files for local curriculum planning, enabling school counselors, local educators, and manpower planners to concentrate on developing skill training areas specified as necessary by local businesses and agencies. **A Computerized Task Inventory System for Providing Curriculum Content. [Carpentry]. Final Report.**

Northern Arizona Univ., Flagstaff.

Pub Date 30 Jun 74

Note—39p.; Not available in hard copy due to marginal reproducibility

**EDRS Price MF-\$0.76 Plus Postage. HC Not Available from EDRS.**

**Descriptors**—Building Trades, \*Carpenters, Job Analysis, \*Job Skills, Questionnaires, Relevance (Education), \*Task Analysis

The pilot study was designed to develop a system for analyzing and providing task invento-

ries for carpentry curriculum development. An initial task inventory of 174 statements was constructed from available published sources, including only those tasks thought to be performed by incumbent workers in residential carpentry in Arizona. The tasks were grouped into the following duty categories: preparing for the job, forming for concrete, framing floors, framing walls, framing a roof, roofing, applying insulation, finishing exterior, finishing interior, and completing special operations. The task statements were assigned to the duty categories sequentially, as they are normally performed on the job. A random sample of 21 members of a carpenters union responded to the personally administered inventory by checking the tasks that each performed and by rating these tasks on a seven point relative time spent scale. The tabulated results list the task statements in descending order of performance frequency and also show ratings of percentage time spent revealing that a variety of tasks were normally performed by the workers. Recommendations to further validate the results are stated. The carpentry task inventory form is appended. (Author/MS)

Descriptors—\*Building Trades, Carpenters, \*Construction Industry, Electricians, \*Improvement Programs, Job Training, Labor Unions, Occupational Surveys, Operating Engineering, Participant Characteristics, Plumbing, \*Program Descriptions, Program Evaluation, \*Skilled Labor, Statistical Data, Tables (Data), Trade and Industrial Education, Union Members

The report describes a study of industry-sponsored upgrading programs for journeymen in construction unions. Interviews with union and training officials, as well as 405 journeymen and 99 contractors, revealed that upgrading activities were concentrated in electrical work, carpentry, and the pipe trades, and that both the number of programs and journeymen's participation had increased rapidly since 1970. Courses were offered in response to worker demand, and were taught by union members, using either school or industry training facilities. Welding, safety, and blueprint reading were offered in most trades, with a variety of specialized courses taught in individual locals. No significant differences were found between participants and non-participants, except that more participants had been trained in apprenticeships. Several suggestions are made for improving upgrading programs, including the prospect of using these programs to assist in bringing more minority journeymen into building trade unions. Appended are lists of persons who provided information for the study and interview forms for journeymen and contractors. A 14-item bibliography is also included. (Author/MS)

Identifiers—Recruits

The report on the management of recruit and initial skill training identifies delays in training cy-

cles, their causes, and resultant costs. In visits to four recruit training centers, eight initial skill training schools, and various headquarters offices, the General Accounting Office (GAO) identified 1,979,000 man-days per year that new members of the Armed Forces and Reserve components spent unnecessarily in training status at a cost of about \$48.1 million. Described are: delays in Army and Marine Corps recruit training systems due to inflexible starting times; the immediate start of training in the Navy and Air Force; management of initial skill training and resulting delays in all the armed services; and delays due to orientation of new members and use of them in work crews. Costs of these delays are reported for each of the services in terms of dollars and man-days. Five recommendations are presented for the Secretary of Defense and each service Secretary to use in reviewing and improving training operations. Appended is a chart showing annual economic costs for E-1 military personnel and a list of Department of Defense officials responsible for administering activities discussed in the report. **Managing Employee Development: A Step-By-Step Approach.**

Civil Service Commission, Washington, D.C. Bureau of Training.

Note—17p.

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

Descriptors—Educational Resources, \*Guides, Learning Processes, Needs Assessment, \*Organizational Development, \*Personnel Management, Program Content, Program Evaluation, \*Systems Approach, Teaching Methods, Training Objectives

A guide for agencies in setting up new employee development programs or a tool for assessing existing ones, the paper presents an eight-step process for organizational training. Step 1 commences with the identification and ranking of learning needs, or conducting a needs assessment. Step 2, selection of learning objectives, includes a job analysis and job performance standards (terminal performance objectives and interim objectives). Step 3 focuses on the selection of learning content while Step 4 is directed toward the selection of learning approaches for training and education. Step 5 deals with the selection of learning resources (resource adequacy and cost/value analysis) and is followed by Step 6, the selection of participants. Step 7, conduct of the learning experience, considers the learning environment, the learning process, and the learning technology. The concluding step involves evaluation (inputs, implementation, outputs, and results) as well as feedback. Although the eight steps may be described as a learning sequence, there is a constant process of interaction between steps. (EA)

Descriptors—\*Administrative Problems, Building Trades, Business Administration, Business Skills, \*Construction Industry, \*Construction Management, Employers, Ethnic Groups, Financial Support, \*Improvement, Industrial Training, Interviews, \*Minority Groups, Negro Businesses, Statistical Analysis, Technical Assistance

An empirical study of minority business enterprise in construction, the paper is based on interviews with 340 general and specialty contractors (out of 1,275 identified minority contractors) in Atlanta, Houston, Chicago, and San Francisco.

Oakland, as well as 300 other individuals including civil rights officials, and other knowledgeable individuals. The study includes consideration of the characteristics of existing contractors and their firms, the aspirations of the contractors, an analysis of the problems they face in upgrading their businesses, and an examination of alternative approaches to improving and expanding minority business enterprise in construction. Among the strategies reviewed are demand stimulation through identifying minority firms in published lists and redirecting public and private procurement toward minority firms and supply development through bonding and financial assistance, technical and managerial assistance, and labor training. Also discussed are the potential and pitfalls of the minority contractor association and joint ventures between minority and nonminority contractors. The general conclusion is reached that some minority contractors have significant potential for advancement which could be realized with the proper assistance. Specific conclusions and recommendations concerning the efforts to offer this assistance are stated. The concluding section lists interview subjects and bibliographic sources. (Author/MS)

Descriptors—\*Career Exploration, Cooperative Education, Counseling Programs, Disadvantaged Youth, \*Job Placement, Job Training, Junior High Schools, Program Descriptions, \*Program Evaluation, Public School Systems, Questionnaires, Secondary Education, Tables (Data), Urban Dropouts, Urban Youth, \*Vocational Counseling, Vocational Education, \*Work Experience Programs

Identifiers—Pennsylvania (Pittsburgh), Pittsburgh Public Schools

The report contains an overall account of three annual evaluation studies (1971-73) of a project designed to demonstrate how four components supplemented the existing counseling system in the Pittsburgh Public Schools. The components providing occupational information were: (1) a career orientation program for sixth, seventh, and eighth grades; (2) a cooperative work experience program for secondary students enrolled in marketable skill-centered programs; (3) a placement program for high school graduates; and (4) Project SET (Select Employment Trainee), a counseling/training program for alienated potential high school drop-outs not enrolled in vocational programs. A summary describes each of the components and presents major conclusions of the three year evaluation reflecting the general success of the program. Other sections of the report provide descriptions of the interactive process used in evaluation, detailed descriptions of the program components, and the procedures used for each of the three evaluations. An in-depth discussion of the evaluation results (including tabulated achievement test scores and attitude data) is presented cumulatively by year for each project component, with emphasis on the third year. Appended are student, parent, and employer questionnaires for the project components, and a student achievement test for the career orientation program. (Author/MS)

**Assessing the Training Needs of Personnel Specialists.**

Civil Service Commission, Washington, D.C. Training Management Div.

Pub Date 74

Note—113p.

**EDRS Price MF-\$0.76 HC-\$5.70 Plus Postage**

Descriptors—Administrative Personnel, \*Educational Needs, \*Evaluation Methods, \*Federal Government, Government Employees, \*Needs Assessment, \*Personnel Directors, Personnel Evaluation, Personnel Management, \*Questionnaires

The document presents tools designed to assist supervisors of personnel specialists in the systematic assessment and identification of the training needs of individual personnel specialists in Federal agencies. The two major components are the questionnaires and the system of scoring and interpreting the questionnaires. The methodology will enable the employee development specialist to determine the training needs of six categories of personnel specialists: personnel management series, personnel staffing series, position classification series, salary and wage administration series, labor-management and employee relations series, and employee development series. There is a set of three different 45-item questionnaires for each type of specialist. The combined results of the three forms will yield a listing of areas of training needs. The questionnaires are designed to accommodate inputs from the specialist and the specialist's supervisor. The result is a readout of each individual's reaction to the questionnaire in terms of the appropriateness of training in areas of importance to personnel specialists. An example of a completed and scored questionnaire and its interpretation is given. Both manual and computer scoring are explained. (Author/EC)

The compilation of research and development activities in secondary and post-secondary agricultural education includes abstracts of 54 studies completed during the period July 1, 1974 to June 30, 1975 in 17 States. Nineteen of the completed studies represent staff research, 11 represent doctoral theses, and 24 represent masters theses. They are arranged alphabetically by State and alphabetically by author within States. A brief summary of the purpose, method, and findings is given for each study. A subject index, utilizing ERIC descriptors, is provided. Studies reported as in progress during 1975-76 are also compiled, arranged alphabetically by State, with authors and titles listed. In progress were 33 staff studies, 30 doctoral dissertations, and 11 masters theses. A chart showing where to find previous summaries of studies in agricultural education on microfiche in the ERIC system is included. (Author)

**Trends and Issues in Graduate Programs in Adult Education.**

Pub Date 8 Nov 75

Note—7p.; Paper presented to the NAPSAC Commission of Professors (Chicago, Illinois, November 8, 1975)

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

**Descriptors**—\*Adult Education, \*Adult Educators, Educational Administration, Educational Philosophy, \*Educational Trends, Employment Potential, Graduate Students, \*Graduate Study, Higher Education, Program Content, Relevance (Education), \*Speeches

A review of the history of adult education (AE) graduate programs and their recent spurt of growth reveals four areas of concern (trends). First, the content of courses seems to be returning to basic, practical knowledge after an emphasis on knowledge without application. Secondly, diversity in the names of units governing AE graduate programs is noted. The issues surrounding these name changes are: public awareness of graduate programs, employability of graduates due to name given program, and diversity of employable skills of graduates. The third concern is the relationship of programs of study to job availability and placement. Younger students with less work experience may give rise to a need for a sound specialty basis for employability. The final concern deals with the philosophies of departments/units for degrees in adult education. The predominant philosophic stance centers on the dichotomy of basic content vs. process. It is

feared that the issues of other more long-term educational units have been taken on philosophically. Perhaps a cooperative philosophy of adult education programs can be arrived at as a beginning to build on. (Author/MS)

**Descriptors**—\*Agriculture, Agricultural Machinery, \*Cost Effectiveness, Economic Factors, Followup Studies, \*Program Costs, \*Program Effectiveness, Salesmanship, \*Vocational Education

The step-by-step cost benefit study, confined to measuring and comparing economic costs with economic benefits, is based on the 1971, 1972, and 1973 classes graduating from the Agribusiness-Machinery Partisan-Salesman Program at District One Technical Institute in Eau Claire, Wisconsin. Numerous tables throughout the report contain cost benefit data. Private Economic Costs, Chapter 1, are reflected in a general formula calculating the components of student opportunity cost, other school related expenses, percentage of students receiving financial aid in agribusiness, and the average amount of financial aid received by students in the agribusiness program. The model implies that a student would work or go to vocational school and does not consider the alternative of college. Chapter 2, Societal Economic Cost, identifies 16 components for computation: instructional costs (teachers), student opportunity costs, average financial aid given, equipment depreciation, building depreciation, ancillary and professional, administration local, debt service, operation/maintenance, transportation, fixed charges, transfers to clearing accounts, outgoing transfers accounts, school sales, food services, and school administration. Societal/private economic benefits are determined in Chapter 3; the concluding chapter determines societal/private benefit cost ratios. Two appendixes contain tabulations of material related to private/societal economic costs. (EA)

**Descriptors**—Educational Needs, Employees, \*Employer Attitudes, \*Manpower Needs, \*Occupational Information, \*Occupational Surveys, Questionnaires, School Industry Relationship, Tables (Data), Vocational Education

**Identifiers**—\*Texas (Howard County)

A survey developed by the Occupational Education Division of Howard University to determine employee supply and demand in Howard County, Texas, involved both employees and employers. Employer data were compiled from interviews with 319 out of a possible 409 employers who employed three or more people. Conclusions and recommendations for the following occupational areas are presented on an individual basis: farm and ranch, industrial, office, health, technical, public service, distributive, home economics, agriculture, and home. General conclusions for employer data cover 27 items pertaining to training programs, educational requirements, employment opportunities, educational needs, and wages. Employee data, based upon surveys of 88 employed and 82 unemployed subjects, were considered too meager for generalized conclusions. Ten tables supplement the discussion. Fourteen brief statements comment on the outcome and knowledge gained from the pilot program and recommendations for improving the survey are

listed. Literature in the area of manpower needs projection is reviewed and project related documents and survey forms are appended. (LH)

**Adult Basic Education Teacher Training in Measurement/Diagnosis of Learning and Teaching Reading and Math. Final Report.**

Ohio State Univ., Columbus. Coll. of Education. Spons Agency—Ohio State Dept. of Education, Columbus. Div. of Federal Assistance.

Pub Date 25 Jul 75

Note—41p.; Report of a workshop (Columbus, Ohio, July 14-25, 1975)

**EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage**

**Descriptors**—\*Adult Basic Education, \*Adult Educators, Educational Objectives, \*Program Descriptions, \*Teacher Education, \*Teacher Workshops

The report describes a workshop for adult basic education teachers in Ohio which utilized the teacher training television series, "Basic Education: Teaching the Adult." Responses from teachers identified the two clusters of content presented: (1) measurement/diagnosis of student learning and individualized instruction, and (2) teaching reading and math and selection and use of materials. A structure for individualizing the experience for participants is described. Resource persons developed the following procedures for the workshop: viewing and discussion of a few relevant television lessons (selected for each cluster), formulation of individual written learning objectives by participants, discussion of the objectives with a resource person, and use of the objectives in planning special sessions. A summary of the television lessons used in each cluster and lists of some of the learning objectives formulated by participants are included in the report. An outline of the special session topics and learning experiences for each cluster is provided. A summary of the participant evaluation of the workshop concludes the report. Appended material (14 pages) includes: a roster of participants, instructions, staff, schedule, the Albany learning lab training package, a discussion guide for film: "The Sound of My Own Name," and the evaluation questionnaire. **Descriptors**—\*Criterion Referenced Tests, Electronic Technicians, \*Equipment Maintenance, Machine Repairmen, Maintenance, Measurement Instruments, \*Military Personnel, Military Training, \*Performance Tests, Speeches, Task Performance, \*Test Construction, Test Results, Test Validity

**Identifiers**—\*Air Force

The paper concerns instruments used in the determination of task performance efficiency of mechanical and electronic maintenance men. Composite results of unvalidated knowledge tests, theory tests, school marks, and supervisors' ratings are presented which indicate that these measurement instruments have low empirical validity. The limitations of traditional systems effectiveness measures are also discussed. Although job task performance tests (JTPT) have higher empirical validity, they have had limited use due to their relatively high cost factors. A series of efforts to develop better criterion referenced JTPT, and to attempt the development of paper and pencil symbolic substitute tests of high empirical validity, were made. Described is the model battery of 48 criterion referenced JTPT covering all key maintenance activities (checkout, align/adjust, remove/replace, troubleshooting, test equipment, and soldering), intended for use on the job, in training, and for validation of symbolic substitute tests. Developed batteries of graphic and video symbolic substitute tests were given limited

validations. Suggestions are made for use of the criterion referenced JTPT in improving maintenance efficiency. Fourteen references are listed, and an appended section describes limitations of system effectiveness measures. (Author/MS)

Self-Perceived Problems of Student Pilots Eliminated from Undergraduate Pilot Training.

Air Force Human Resources Lab., Williams AFB, Ariz. Flying Training Div.

Spons Agency—Air Force Human Resources Lab., Brooks AFB, Texas.

Report No.—AFHRL-TR-75-8

Pub Date Jul 75

Note—30p.

EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage

Descriptors—Educational Problems, \*Expulsion, \*Failure Factors, \*Flight Training, Perception, \*Post Secondary Education, Student Attitudes, \*Student Problems

Identifiers—\*Student Surveys

The report describes how students eliminated from undergraduate pilot training (UPT) perceived the circumstances leading to their elimination. Personal interviews were held with 117 students eliminated from UPT. The data obtained were organized on the basis of the official cause of elimination. The frequencies of problems or factors perceived as contributing to elimination were categorized according to the five most prevalent causes of UPT attrition: self-initiated elimination, manifestation of apprehension, flying deficiency, medical deficiency, and academic deficiency. Information from the study is presented in a series of 10 tables following the interview format. Similarities and differences in student perception of problems as a function of cause of elimination are noted and briefly discussed. The contents of the tables provide suggestions which may be evaluated on their merits in considering prospective modification of training procedures. It was concluded that eliminated students' perceptions of training problem areas can provide useful information for training program management and can suggest areas for training research. The elimination interview format is appended. (Author/EC)

Identifiers—\*Center for Medical Manpower Studies, CMMS

The report, directed toward hospital administrators, chiefs of services, and health personnel in general, outlines the work at the Center for Medical Manpower Studies (CMMS) (completed and in progress) concerned with restructuring of health occupations. Briefly described is the growth of health care services, expenditures, and personnel. Conclusions of earlier studies dealing with health manpower shortages are presented with predictions for the future. The methodology and findings of a pilot study in hiring standards for paramedical manpower are discussed which revealed that hiring standards do not reflect consideration for educational disadvantages, apparent shortages, or changes in job content. A list of eight recommendations for change presented to the Manpower Administration is included. Techniques used, findings, and conclusions are reported for an in-depth study of a single hospital, which found significant overlap of functions by the different nursing occupations studied. The hospital's positive reactions to the report's conclusions are described. Information on the establishment of CMMS, the current study on improving utilization of health manpower, dissemination of research findings, and future research plans is also provided. A list of publications of CMMS and a list of selected readings conclude the report. (Author/MS)

The guide for hospital administrators, chiefs of services, and health personnel in general, suggests ways to evaluate the utilization of manpower and to restructure health manpower occupations. The need to evaluate utilization is outlined in terms of problems faced by health institutions. The experience of the Center for Medical Manpower Studies (CMMS) is described including its research findings on overlapping of medical functions, chronic employee shortages, high turnover, and lack of incentives. A section on analyzing the utilization of hospital personnel summarizes studies on hiring standards for paramedical manpower and restructuring paramedical occupations. A suggested methodology for individual hospitals to use in evaluating manpower utilization is presented. Detailed guidelines and instructions for conducting a survey of health personnel within a facility and criteria for judging the results are provided (including completed sample forms and instructions for summarizing data). Eight CMMS recommendations to The Cambridge Hospital for improving manpower utilization are listed with the action taken on them. Ten specific guidelines for restructuring of paramedical manpower are offered. Lists of CMMS publications and selected readings conclude the guide. (Author/MS)

The Magnitude of Medical Problems of the Elderly in the United States.

Northeastern Univ., Boston, Mass. Center for Medical Manpower Studies.

Pub Date Mar 75

Note—14p.

Journal Cit—L'Onpi (Rivista Mensile Dell'Opera Nazionale Pensionati D'Italia) v2n4 (April, 1973)

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—\*Disease Rate, Geriatrics, \*Health Needs, \*Health Services, Medical Services, \*Older Adults, Physical Health, Social Problems, \*Special Health Problems, Statistical Studies, Tables (Data)

Medical problems of older Americans are described, based on the types of illnesses and their frequency among the elderly. Those 65 years of age and older are defined as elderly, placing 20 million of the 203 million Americans in this category (1970 census). The major causes of chronic conditions in the elderly and the percent of those 65-74 years of age who are affected are stated as: heart disease (40 percent), rheumatoid arthritis (9 percent), and hypertension (38 percent). The findings of a study on degrees of activity limitation of the elderly are reported, indicating that, of those with a chronic condition, 85.6 percent have some degree of mobility. Tabulated statistics demonstrate that financial resources do not prevent contraction of a chronic disorder. The factors contributing to deficient quality of medical care are outlined, including unnecessary operations and drugs and failure of physicians to update their knowledge. The rising costs of medical care as a problem for the elderly and their high hospital utilization rate are discussed. The article concludes with some observations on possible ways to bring about needed improvement in health care for American elderly and other age groups. (MS)

Descriptors—Adult Students, Demography, \*Program Descriptions, Program Development, \*Program Evaluation, Project Training Methods, \*Rehabilitation Centers, \*Staff Improvement, \*Student Characteristics, Training Objectives

The COSTAL program provided training and consultation in a variety of formats to a total of 171 halfway house staff members. Students were recruited from 25 halfway houses in Washington D.C. area, and participated in courses in achievement motivation, group dynamics, adult learning, and counseling skills, with college credit available. Three cycles of training were provided, with cycle 1 serving 19 students, cycle 2 serving 18, and cycle 3 (not discussed further) serving 134. Demographic statistics for cycles 1 and 2 include age, sex, race, education, marital status, living arrangements, annual salary, religion, auspices, and related background. Changes in course format from cycle 1 to cycle 2 are discussed, as well as student response. A series of voluntary options which trainees could request was developed, which included videotaped critiques of individual counseling sessions and group sessions at halfway houses, the creation of adult learning centers, and workshops for staff and/or residents. Summary and conclusions state that the program has been a success and should be continued. (LH)

Identifiers—Wisconsin (Eau Claire)

The K-Adult research and development project in career education in Eau Claire, Wisconsin, contained two phases: (1) Eau Claire Joint School District Five, introducing the 16 Wisconsin career development concepts into school curricula through teacher workshops, resource materials, public relations, and consulting services for classroom teachers and staff; (2) District One Technical Institute, implementing field testing and dissemination of project developed activities and materials, consultant services to workshop participants and school staff, coordination of information and service delivery between institutional personnel and area agencies, and availability of learning and career resource information from the local business-industrial community. Each phase is discussed in terms of management, materials production, project goals, dissemination, and transportability. A report summary outlines time period goals and objectives, procedures, results, evaluation, conclusions, and recommendations. Problem context, objective and evaluation procedures, joint management of public and postsecondary schools, and project conclusions and recommendations are presented. A 45-page third-party evaluation felt that goals were met. Strategies for assimilation, listings of materials produced and audio-visual resources, materials utilization charts, reaction form, evaluation instruments, and raw data are appended. (LH)

 Descriptors—\*Contracts, \*Cooperative Education, Guidelines, \*State Programs, \*Vocational Education

The publication is intended to encourage states and localities to give further consideration to the development and utilization of training agreements in the conduct of cooperative vocational education programs. Training agreements assure the integrity of the continuing educational experiences that occur outside the classroom. It is with this awareness that the material contained within this document was brought together. The introduction briefly states the role of cooperative education and lists the various reasons why training agreements are essential to these programs. This is followed by summary definitions of training agreements, training plans, evaluation reports and followup reports; a general outline of the content of a training agreement (general information, monetary compensation, statements of agreement, training plans, and signatures); and brief descriptions of the 12 training agreements issued by the states of Arizona, Arkansas, Maine, Michigan, Mississippi, New Jersey, Oregon, Pennsylvania, Tennessee, Texas, Virginia, and Wyoming. Sample copies of each of these state's training agreement forms are provided. The document concludes with a directory of the State vocational education directors. (BP)

Identifiers—Maine, Minicourses, \*New Opportunities for Work Program

The New Opportunities for Work Exemplary Career Education Program (N.O.W.) guide is comprised of 25 world of work learning packages for grades K-6, two units on career education in art for grades K-6 and K-3, 14 minicourses designed for leisure time activities, and 19 learning packages on careers for grades 7-9. It concludes with a discussion of evaluation procedures and studies used in the program. Generally, each learning package consists of an outline of objectives, learning activities, and materials and resources needed. In some cases additional information is provided as to subject matter, occupational information, motivation activities, study activities, evaluation procedures, and scope and sequence. The final section on evaluation discusses techniques and procedures for pre- and posttesting and, in addition, provides reports on evaluative studies on learning packages for grades 1-6. The appendix contains a K-16 career education scope and sequence paradigm. (BP)

The one-year extension (1973-74) of the Occupational Information Improvement Project (OIIP) was implemented to provide recommendations for the continuation or termination of the Occupational Information Data System of the New Hampshire VIEW (Vital Information for Education and Work) program. A survey was administered to 120 schools identified in the 1973-74 listing of the New Hampshire Pupil Personnel Service Workers Directory with a 60 percent return. Three questions were of concern in the survey: (1) the number and location of microfiche readers or reader-printers; (2) number and location of the three-volume set of books and/or aperture cards; and (3) number of books and/or aperture cards needed. Fourteen recommendations were based on the project director's premise that the Occupational Information Data System should be continued in New Hampshire, the summaries of the on-site visits of the VIEW programs in Connecticut and Pennsylvania, and attendance at the National VIEW Conference and Workshop.  Descriptors—Agricultural Laborers, Census Figures, Employment, \*Employment Patterns, \*Employment Statistics, Employment Trends, Government Employees, Jobs, \*Labor Force, Labor Supply, \*Multiple Employment, \*National Surveys, Racial Composition, Seasonal Employment, Statistical Data, Tables (Data), Teacher Employment, Working Women

The document reports findings from the latest survey of multiple jobholders 16 years old and over. About 3.9 million workers held two or more jobs in May 1975. This accounted for 4.7 percent of all employed persons. The multiple jobholding rate for men was 5.8 percent and 2.9 percent for women. The rate was also higher for whites than blacks. The proportion of multiple jobholders who are women increased from 16

percent in 1970 to 24 percent in 1975. About 23 percent (900,000) of all moonlighters had at least one job in agriculture. The multiple jobholding rate for workers whose primary jobs were in agriculture (7 percent) continued to be higher than for those in nonagricultural industries (4.6 percent). Men whose primary jobs were as teachers below the college level had the highest moonlighting rate (16 percent). By industry, men whose main jobs were in public administration in state and local governments, and in educational services had the highest rates (12 percent). The proportion of multiple jobholders holding second jobs to meet regular expenses (35 percent) was slightly higher than a year earlier (32 percent). The next higher proportion of multiple jobholders moonlighted mainly because they enjoyed the work (18 percent). Five tables support the data analysis. (Author/EC)

**Children of Working Mothers, March 1975: Summary, Special Labor Force Report.**

Bureau of Labor Statistics (DOL), Washington, D.C.

Pub Date Aug 75

Note—8p.

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**  
 Descriptors—Children, Comparative Analysis, Employment Patterns, \*Employment Statistics, Employment Trends, \*Family Characteristics, Family Income, Family Status, Laborers, Labor Force, \*Mothers, \*National Surveys, Preschool Children, Racial Composition, Statistical Data, Tables (Data), Working Parents, \*Working Women

The following are some of the findings based on the results of the annual survey of marital and family characteristics of workers: (1) about 27.6 million of 62.7 million children had mothers in the labor force (over 2 million more than in March 1970); (2) 1.1 million of 6.5 million children under six were in families headed by women (71 percent more than in 1970); (3) the number of children in two-parent families has decreased since 1970; (4) families with working mothers had fewer children; and (5) children whose mothers were employed were families with considerably higher incomes. More black children (48 percent) than white children (38 percent) in two-parent families had employed mothers. Three tables include the following information: (1) number of children under 18 years old, by age, type of family, mother's labor force status, and race, in March 1970 and March 1975; (2) number of families and average number of own children under 18 years old, by type of family, mother's labor force status, and race, in March 1970 and March 1975; and (3) number of children under 18 years old, median family income in 1974, type of family, parents' labor force status, and race, in March 1975. **Self-Directed Learning: A Guide for Learners and Teachers.**

Pub Date 75

Note—135p.

Available from—Association Press, 291 Broadway, New York, New York 10007 (\$4.95)

Document Not Available from EDRS

Descriptors—\*Adult Education, \*Adult Learning, Educational Objectives, Learning Processes, Performance Contracts, Rating Scales, \*Resource Materials, Self Evaluation, Student Teacher Relationship, \*Teaching Guides, \*Teaching Methods, Teaching Techniques

The self-directed learning guide consists of three parts: The Learner, The Teacher, and Learning Resources. Part 1 contains four inquiry projects which examine the importance of self-directed learning, its assumptions, required competencies, and learning plan design. The nature of the inquiry between author and teacher in Part 2 is to explore the implications for teachers of having self-directed learners as students. Knowles visualizes the teacher role as that of facilitator of learning rather than teacher, procedural guide rather than content transmitter. The reader is led through a semester graduate course in "The Nature of Adult Education," taught by the author, where the teacher performs as a facilitator and resource to self-directed learners. Part 3 consists of 15 learning resources: a comparison of assumptions and processes, competencies of self-

directed learning, a learning contract, descriptions of self-directed learners, relationship-building exercises, a consultation skill-practice exercise, a self-assessment exercise, a content-course self-assessment instrument, guidelines for stating objectives, questioning strategies/techniques, relating methods to objectives, exercises in reading a book proactively and using human resources proactively, types of evidence for different objectives, and examples of rating scales. The appendix contains guidelines for contract learning. (EA)

**Descriptors—Business Education, Instructional Materials, Interpersonal Competence, Leadership Qualities, Leadership Responsibility, \*Leadership Training, Learning Activities, \*Manuals, \*Office Occupations Education, Office Practice, \*Secretaries, \*Self Concept, Study Guides, Supervisory Training**

The student manual contains eight sessions designed to help secretarial students improve their office management skills, through an analysis of their individual leadership abilities. The sessions are: (1) what it takes to succeed in a secretarial position, focusing on the characteristics of a good leader; (2) how to develop a sensible attitude toward yourself, focusing on self-knowledge and the development of a positive self-attitude; (3) how to develop positive leadership attitudes, focusing on improving interpersonal skills; (4) the ingredients of leadership, focusing on basic skills; (5) the methodology of leadership, including further interpersonal and problem solving skills; (6) how to apply leadership in bringing about effective procedures in the office, focusing on standards, efficiency, and delegation; (7) the ingredients of specific office procedures, focusing on technology, work flow, and word processing; and (8) small group office activities. The first seven sessions discuss in detail the concepts to be developed and provide accompanying individual, small and large group activities; case studies; questions; self inventory tests; review/response workbook activities; and class discussion exercises. The Rate Training Manual is one of a series of training manuals prepared for enlisted personnel of the Navy and Naval Reserve designed to aid Aviation Boatswain's Mate H 2 in preparing for advancement to ABH1 and the ABH1 in preparing for advancement to the rank of ABHC. Chapter 1 discusses the enlisted rating structure, the ABH service ratings, the requirements for advancement, and the advancement opportunities for petty officers. Chapters 2-8 cover the following topics: aircraft handling equipment; aircraft handling; aircraft crashes, firefighting, and crew entrapment; shorebased emergency arresting gear and related equipment; shipboard firefighting; shipboard damage control; and administration. Photographs and diagrams are interspersed throughout the document, which also contains a list of U.S. customary and metric system units of measurements, a subject index, a list of the minimum qualifications for advancement to Avia-

tion Boatswain's Mate H First Class and Chief Petty Officer. A 43-page course assignment booklet for the nonresident career course completes the document. (Author/BP)

**Identifiers—Pennsylvania (Coatesville)**

The Student Volunteer Career Elective Program at the Coatesville High School is designed to provide instruction and practical learning experience for 10th grade students who are interested in health careers and training in areas of technical, trades, and administration occupations. It is a cooperative project between the school and the Coatesville Veterans Administration Hospital. The school provides a comprehensive academic program (20 hours per week of classroom training), and the hospital provides a variety of career experiences (12.5 hours per week). The participants have 25 field experiences to choose from. The student can select a different field every nine weeks from the following areas of hospital services: building management service, canteen service, chaplain service, dietetic service, engineering service, library service, medical illustration service, nursing service, and supply service. General and specific objectives for the program are given. An advisory council was formed to assure the on-going success of the program. The selection process for applicants, the program policies, time schedule, and program and student evaluation methods are briefly described. Samples of forms used for the application, permission, selection, and evaluation of participants are appended. (Author/EC)

**EDRS Price MF-\$0.76 HC-\$20.94 Plus Postage**

**Descriptors—\*Course Content, \*Curriculum Guides, \*Driver Education, Instructional Materials, Post Secondary Education, \*Resource Guides, Skill Development, Teacher Education**

This guide provides operators of driving schools with a body of information and procedures that will enable them to develop programs capable of meeting the particular needs of their students, and capable of being administered within the resources available to them. The guide does not attempt to prescribe one specific instructional program but instead offers flexibility, together with details and resources to be used or supplemented. Part 1 discusses the characteristics of the highway transportation system, its relationship to accident causation, and the programs that exist to improve the effectiveness of the system. Part 2 deals with the components of the instructional system: (1) the system itself and its objectives; (2) the professional driving instructor; (3) curriculum development; and (4) curriculum administration. Part 3 offers a guide for 60 driving tasks in four general areas: basic controls, driving procedures, emergency procedures, and system maintenance. For each task suggested procedures and skills to be acquired, learning problems to be anticipated, hazards and laws involved, and suggested instructional aids and resource materials are included. The two appendixes consist of lists of addresses of suppliers of instructional aids and resource materials. (Author/BP)

**Identifiers—\*Washington**

Vocational technical institutes in Washington were developed in some common school districts as single-purpose institutions for vocational training programs. These institutes have offered secondary and post secondary vocational education programs. Since the 1967 Community Col-

lege Act there have been several studies concerning the structure and organization of vocational education. The Senate Select Committee on Vocational Education offers recommendations for the establishment of a commission on vocational education based on a special study concerning the desirability of modifying the state's vocational education system. Several fundamental issues have underlined the arguments surrounding vocational education: philosophical differences, jurisdictional differences, and the question of compatibility between desired state and federal policies and the administration of vocational programs. The philosophical problem is emotional and therefore difficult to resolve. The second problem is concerned with the lack of a clear legislative mandate for the jurisdictional responsibilities for providing educational services. The third problem is concerned with the use of federal funds under the guidance of federal policies. Different viewpoints are presented. Appended materials include the Senate resolutions and the select committee; Substitute Senate Bill No. 2463 and a bill analysis; budget excerpts; correspondence; excerpts from Title 20, U.S. Code Annotated; and official statements. Conference on the Adult Learner: Proceedings: May 23 and 24, 1975. Occasional Paper No. 25.

Washington Univ., Seattle. Center for Development of Community Coll. Education.

Pub Date 24 May 75

Note—78p.

**EDRS Price MF-\$0.76 HC-\$4.43 Plus Postage**

Descriptors—\*Adult Education, \*Adult Education Programs, Adult Educators, \*Adult Learning, Adult Students, Bibliographies, \*Conference Reports, Educational History, Learning Characteristics, Learning Motivation, Learning Processes, \*Literature Reviews, Student Interests, Teaching Techniques

The document contains a brief outline of the conference proceedings and the text of two papers presented at the conference. Alan M. Rubin's paper, "Give Me a Fish and I Eat for a Day. Teach Me to Fish and I Eat for a Lifetime" (from the Babylonian Talmud), examines the question of whether our institutions of higher education are providing the opportunities to learn necessary life skills and presents a curriculum and service program, which operates from a community-based life skills center and is centered entirely around the adult students' life skills. "Adult Learning," a 65-page presentation by Shannon S. Widman, provides an overview of the field and particular characteristics of the adult learner, as well as resultant implications for adult educators. An historical review of adult education, which traces its organizational and institutional development, is included to provide insight into current problems in adult education. Drawing on research in the field, the author examines the motivations, learning processes, and performance of the adult learner. Successful course planning, teaching techniques, and teacher role for adult learning, likewise, are discussed. The paper also contains a partially annotated 10-page bibliography on adult learning. Survey of Community Agencies [with Home Economics Related Programs—Central Quadrant].

Syracuse City School District, N.Y.

Pub Date 74

Note—52p.

**EDRS Price MF-\$0.76 HC-\$3.32 Plus Postage**

Descriptors—Adolescence, Adults, Childhood, Clothing Instruction, \*Community Agencies (Public), \*Community Programs, Consumer Education, Course Descriptions, \*Directories, Health Programs, \*Home Economics, Home Economics Education, Home Management, Nutrition Instruction, Older Adults, Program Descriptions, \*Surveys, Young Adults

Identifiers—New York (Syracuse), Syracuse City School District

The survey was designed to identify home economics related programs in community agencies in the central quadrant of the Syracuse City School District. Factual information and descrip-

tive information about the programs and perceived program needs were gathered using the interview method. A grid was set up with four subject areas (food and nutrition; housing, furnishings, and equipment; clothing and textiles; and human development) located on the vertical axis and six content emphases (management, buymanship, leisure, careers, health and safety, and relationships) located on the horizontal axis making a total of 24 cells. This grid was used to classify cell(s) in which a given program operated (program instances) and to note the number of cells in which expressed needs were identified. Of 118 agencies identified, 102 were contacted and 44 had programs. Educational institutions and volunteer agencies provided the greatest percentage of programs (60 percent). Most program instances were in human development (36.5 percent) and food and nutrition (one-third). Program needs clustered around human development, career ladders, buymanship, and management. A detailed discussion of the findings and specific implications and recommendations are included. Appended are: listing of agencies by category, listing and description of programs by agency, letter of introduction, and references consulted. (Author/MS)

National Conference on Cooperative Education (Washington, D.C., April 3-5, 1973).

Bureau of Occupational and Adult Education (DHEW/OE), Washington, D.C. Div. of Vocational and Technical Education.

Pub Date 5 Apr 73

Note—66p.

**EDRS Price MF-\$0.76 HC-\$3.32 Plus Postage**

Descriptors—Apprenticeships, \*Career Education, Community Cooperation, Community Involvement, Community Resources, \*Conference Reports, \*Cooperative Education, Cooperative Programs, Educational Improvement, Employment Potential, Interinstitutional Cooperation, Rural Urban Differences, \*School Industry Relationship, \*Vocational Education

The three-day conference focused on giving clearer direction and visibility to community resources utilization in preparing persons for employment. It sought to clarify the scope of cooperative education as a plan for delivering occupational skills and to examine selected issues which would serve to stimulate expansion, improve practices, and cooperative relationships among educators, employers, and organized labor. The 148 conference participants included State Department and university personnel, local educators, union officials, employers, representatives from national organizations, and other federal agencies from 45 states, the District of Columbia, and Trust Territories. Background papers include Education in a Changing Society (C.H. Madden), A Prospectus for Cooperative Vocational Education (W.F. Pierce), and Critical Issues in Cooperative Vocational Education (R.M. Worthington). Different viewpoints from the areas of business (J.A. Pinkston), labor (J.C. Turner), and education (P.W. Briggs, R.L. Bennett, and E.C. Roberts) are presented. Seven issues dealing with cooperative vocational education were the topics of group reports: role expectations in career education, expansion of cooperative education in career/job preparatory curriculums, relationship to apprenticeship training, liability considerations, participation of students under age 16, rural and urban considerations, and employer participation. J.K. Coster's evaluation of the conference concludes the document. (Author/EC)

Guidelines for Clothing Education. H. E. Bulletin No. 34.

Washington State Coordinating Council for Occupational Education, Olympia.

Pub Date 72

Note—191p.; Produced by the Home and Family Life Section

**EDRS Price MF-\$0.76 HC-\$9.51 Plus Postage**

Descriptors—Behavioral Objectives, \*Clothing Instruction, Curriculum Development, \*Curriculum Guides, \*Home Economics Education, \*Learning Activities, Learning Experience, Resource Guides, Secondary Education, Social Influences, \*Textiles Instruction, Unit Plan

The curriculum guide is organized around major concepts and generalizations on textiles and clothing considered educationally significant.

The first major part of the document (15 pages) provides a detailed organizational outline of the behavioral outcomes and generalizations for the unit plans. The material is organized according to levels of maturity: (1) beginning (you), (2) intermediate (your family), and (3) advanced (your future). The second major section (142 pages) provides four unit plans. The first three units, prepared for the three levels of maturity, stress two concepts: the significance of textiles and clothing to the individual in society and acquisition and use of textiles and clothing. Each unit specifies the major concept, areas of concentration, learning level, and behavioral outcomes; and is organized according to coordinated generalizations, learning experiences, and resources for learning. The fourth unit on clothing construction specifies the major concepts, areas of concentration, concepts, and generalizations. It is organized according to learning experiences or activities based on the five clothing construction concepts of compatibility, fitting, flexibility, stabilizing, and shaping. The document concludes with three appendices: the criteria for learning experiences and teaching procedures, suggestions for individualized instruction, and lists of resource materials. (BP)

Characteristics and Needs of Veteran-Inmates in Pennsylvania State Correctional Institutions.

Pennsylvania State Dept. of Education, Harrisburg; Pennsylvania State Dept. of Justice, Harrisburg. Bureau of Correction.

Pub Date 30 May 75

Note—29p.

**EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage**

Descriptors—Adult Education, Correctional Education, \*Corrective Institutions, \*Data Collection, Educational Needs, \*Individual Characteristics, \*Prisoners, Tables (Data), \*Veterans, Veterans Education

Identifiers—\*Pennsylvania

In 1974, Pennsylvania began data collection on veteran-inmates of its eight correctional institutions to assist them in taking advantage of veterans' educational benefits. A detailed interagency chronology of the efforts of the State Education, Correction, and Military Affairs Departments and the Veterans Administration is contained in the report. Of a total of 6,039 inmates, 1,521 veterans were identified. A stratified random sampling was made to estimate percentage of bad conduct, dishonorable, and undesirable discharges; percentage with Army service; average duration of active duty; average minimum sentence length; average educational grade level; percentage of blacks; number of prior offenses; and offense types. A 100 percent sampling indicated military service by war era and eligibility/noneligibility for GI educational benefits. The average age for veterans was 33.6 years with a 10th-11th grade level of education; total inmate population age was 27 years with a fifth grade educational level. Approximately 54.4 percent veteran-inmates attended small group benefits briefings. The most prevalent request for assistance was institutional skill training/education. Intensive followup is planned in order to significantly increase veterans' participation in educational programs. (EA)

Descriptors—Administrator Education, Career Education, Educational Legislation, Federal Aid, Federal Legislation, \*Followup Studies, Inservice Education, Internship Programs, Leadership Training, \*Participant Satisfaction, Preservice Education, \*Professional Continuing Education, Question Answer Interviews, Questionnaires, Staff Improvement, \*State Programs, Tables (Data), Teacher Education, \*Vocational Education, Workshops

Identifiers—Education Professions Development Act (553), \*Illinois

Fifteen Illinois Education Professions Development Act (553) funded projects, mainly directed toward professional development in vocational-career education, provided the basis for the follow-up study. The projects, which varied in scope, activity, and duration were: More Effective Staff Utilization, In-Service Education for Teachers of Disadvantaged Youth, Pre-Service Training in Environmental Occupations, Workshop on Career Education for Elementary School Principals, Health Occupations Teacher Education Program, Occupational Education Administration Training, In-Service Work Experience Internship Program for Occupational Education Teachers, Data Processing Institute for Teachers, Writing Measurable Objectives for Vocational Education, Pre-Service Training in Environmental Maintenance, VOTEC X349: A Correspondence Course in Leadership Development in Vocational Education, Teacher Education in Vocational and Technical Education, Vocational Education Institute: Leadership Development, Pre-Service Administration by Competency, and Internship for Leadership in Occupational Education. Interview results with 20 project personnel and 98 participants are presented as generalized responses to interview questions. Data from 301 questionnaires (60 percent return) are reported compositely, as well as individually for 13 projects. Both interview and questionnaire data indicated important positive changes in participants' professional performance and high achievement of intended project objectives. The 36-page appendix contains copies of the questionnaire, interview guides, and additional tabulated data. (EA)

**Descriptors—**Adult Basic Education, \*Adult Education, Adult Students, Career Planning, Case Studies, \*Job Satisfaction, Learning Activities, \*Self Concept, Small Group Instruction, \*Study Guides, \*Vocational Development, Work Attitudes, Worksheets

The self-instructional program of learning activities is designed for classroom use with both employed and job-seeking adult basic and general adult education students. Overall objectives include (1) reviewing and developing work incentives for an occupation as described in a work history, (2) considering the relationship between job satisfaction and job productivity, (3) examining factors which contribute to developing and maintaining a positive self-perspective towards work and self, and (4) establishing a self-improvement career plan. An indepth case history of an individual work life is initially introduced and followed up with various related learning activities in which participants work individually, with other individuals, and within small and large groups. The series of self-analysis checklists and worksheets focus on job satisfaction, job productivity, work attitudes, positive self-attitude, and job objectives/career goals. (EA)

**Identifiers—**Canada, England

Different aspects of the development of continuing education in Canadian universities and institutions were studied by the British author through visits to Vancouver, Toronto, Montreal, Winnipeg, Saskatoon, Calgary, and Banff. Short visits were also made to Massachusetts, Washington, Oregon, and California. Comparisons between Canadian and British approaches to continuing professional education were made on the basis of the visits regarding: their activities and development; the organization of the professional staff and activities in the centers for continuing education; university activities in the professional areas of engineering and management; the training of adult educators; and the financing of continuing education activities. Opportunities for part-time degree study in Canada and the United States through the extended day and trimester systems offer new ideas for continuing education in British universities. Appended materials (30 pages) contain the author's notes on the continuing education activities at the universities visited in Canada and in the United States on an individual basis. (EC)

**Identifiers—**\*California Manpower Management Information System, CMMISP

The California Manpower Management Information System Project (CMMISP) is charged with the task of developing and implementing procedures for gathering and disseminating information to be used for comprehensive educational planning, manpower planning, and career counseling and guidance of students and individuals. Four factors essential to the successful completion of the project are the legislative mandate, endorsement from the governor, California Joint Occupational Preparation Task Force/MMISP administration, and MMISP information dissemination and implementation testing. A work plan summary and an operating budget summary present detailed descriptions of individual tasks and activities for 1974-75, 1975-76, and 1976-77, together with reports on the current (and expected) status and sources of funding for each task. The system consists of three components and their elements: (1) manpower demand component, (2) manpower supply component, and (3) socioeconomic factors component. Individual workplans for the three components are divided according to their task number and title. They are presented under the following topics: task administration, introduction, task objectives, activities to accomplish objectives, and status and source of funding. Nearly one-half of the document contains appended materials related to the project's drafting, proposal, legislation, and detail budget. (Author/EC)

**Descriptors—**\*Educational Research, \*Guidelines, Research Criteria, \*Research Design, \*Research Methodology, \*Research Opportunities

The author makes suggestions for two types of educational research and offers guidelines for carrying out and writing up the research. His first suggestion is a topic for research: the development of an authoritative definition for three terms: (1) regionally identified demand for workers, (2) articulation between secondary curriculums and related curriculums at postsecondary institutions, and (3) influence of sex stereotyping in student selection of occupational programs. After statements of the purpose, the problem, and the need, the author lists the research questions, describes suggested methodology, and makes design and staffing suggestions. Anticipated time frames are given. The second research suggestion is an innovative format for the presentation of survey results, one which includes a self-evaluation rating and interpretive data. The nature of the instrument and data are explained, and a self-evaluation instrument ready for duplication and a self-rating key are provided. A sample comparative rating scale illustrates a reporting format. A criterion is outlined. (AJ)

**Supply and Demand for Vocational Agriculture Teachers in Washington State, 1975 and 1976.**

Washington State Univ., Pullman. Coll. of Education.

Pub Date Aug 75

Note—56p.

**EDRS Price MF-\$0.76 HC-\$3.32 Plus Postage**

**Descriptors—**Enrollment Trends, \*Faculty Mobility, Program Development, Questionnaires, \*State Surveys, Tables (Data), Teacher Attitudes, Teacher Persistence, \*Teacher Supply and Demand, \*Vocational Agriculture, \*Vocational Agriculture Teachers

**Identifiers—**\*Washington

The study's purpose was to determine the supply and demand for vocational agriculture (Vo-Ag) teachers in Washington State for 1975-76. Primary source data were collected from the files of the State superintendent; institutional information was obtained from Vo-Ag teacher program directors of five regional State universities; and a questionnaire was mailed to all Washington secondary schools, with a 97 percent return rate. Among the 11 general findings were these: class sizes, enrollments, and offerings in Vo-Ag have increased in the 1970's, as has the number of high schools offering Vo-Ag courses; Vo-Ag teachers generally perceive their teaching loads to be heavier than those of other teachers; Vo-Ag teachers are generally younger than their cohorts. One of three reasons cited by high schools without Vo-Ag programs was the unavailability of certified Vo-Ag teachers. Enrollments of the five teacher preparatory universities appear to be in a steady-state, except for Utah. The demand seems to exceed the supply for 1976 by a range of from 3 to 18 teachers. Other findings related to teacher mobility and loss. It is concluded that factors affecting supply and demand for Vo-Ag teachers be studied further. An agricultural education checklist and the survey instrument are appended. (Author/AJ)

**Descriptors—**Career Opportunities, \*Indexes (Locators), \*Information Systems, Instructional Aids, \*Microfilm, \*Occupational Information, Program Descriptions, \*Secondary Schools, State Programs, Vocational Counseling

**Identifiers—**\*Career Information Service, CIS

The document is an index to the Career Information Service (CIS), a cooperative program between the Greater Lowell Regional School District and the Massachusetts Division of Occupational Education. The program utilizes the microfilm aperture card technology for disseminating occupational information in a school setting; its objectives are to provide localized, up-to-date occupational information for secondary students across an entire State, to provide school counselors with current occupational information

with which to work, and to provide educators with a teaching aid that will assist them in relating school programs and subject matter content to the world of work. The system consists of a set of 644 microfilm aperture cards which carry occupational briefs; one four-page brief is contained on each card. A microfilm reader is located in each participating school for users of the system. The index lists and describes, in one or two sentences written at a sixth-grade reading level, the 644 careers whose briefs are available in the system. The index is preceded by a listing of the CIS career titles without annotation. Both lists give Dictionary of Occupational Titles (D.O.T.) numbers and Office of Education (O.E.) numbers. (Author/AJ)

**Evaluating Statewide Programs of Adult Basic Education: A Design With Instrumentation.**  
Columbia Univ., New York, N.Y. Center for Adult Education.

Pub Date 75

Note—152p.

**EDRS Price MF-\$0.76 HC-\$8.24 Plus Postage**

**Descriptors—**\*Adult Basic Education, \*Adult Education Programs, Adult Students, Educational Objectives, \*Evaluation Methods, Inservice Teacher Education, Instruction, Interagency Cooperation, Personnel, Program Evaluation, \*Questionnaires, Recruitment, State Programs

**Identifiers—**Iowa, \*Perspectives Discrepancy Assessment

Designed to assist evaluators of statewide programs for Adult Basic Education (ABE), the document presents a perspectives discrepancy assessment approach. The evaluation design and instrumentation presented were used to evaluate ABE programs in Iowa, and this effort is described, together with suggestions for adapting the Iowa design to fit other Statewide programs. Six major areas of decision making are identified, with specifics showing how to analyze questionnaire data in terms of expectations and current practice: (1) goal setting, (2) instruction, (3) recruitment of students, (4) staffing, (5) in-service education for staff development, and (6) collaboration. An extended analysis examines students and staff. The instruments used in Iowa are included: evaluation committee and ABE coordinator questionnaires, covering the six major areas of decision making; teacher questionnaire, form A involving intended practice, form B involving current practice; student questionnaire, seeking student opinions about their classes; adult education director questionnaire; learning center coordinator questionnaire; Department of Public Instruction questionnaire; and co-sponsor questionnaire, involving the organization with which the ABE program co-sponsors classes. The evaluation methodology is flexible, and suggestions are made for revision of instruments and the limitation to one or more of the six areas of decision making. (LH)

**Identifiers—**Washington (Seattle)

Three elementary schools in districts of the Seattle, Washington area were the target of project EVA (Early Vocational Awareness) which developed career awareness resource materials. The document consists of two major components: sample instructional materials (40 pages) and information about the project (60 pages). The 14 multi-use resource packages designed for instructional use include two for each grade (K-6) and contain physical activities and supporting media. Each package emphasizes a cluster of occupations and contains objectives, activities, materials such as field trip site suggestions, available resource speakers, a teacher's guide, and testing materials. Guidelines used in development included emphasis on a greater number of occupations, additional occupations for girls, methods for finding and grouping occupational information, emphasis on ability and training, realistic job descriptions, relation of classroom skills to future jobs, use of a variety of media including "hands-on" experiences, and integration of material within existing curriculum. The appended final report includes teacher and student evaluations and student growth data. (Author/KJ)

The final report consists of four parts: (1) a report of the project to design an exploratory business course, (2) a course outline for that course, (3) a list of objectives and teaching suggestions, and (4) a bibliography and list of resources. The intent of the project was to design a curriculum for a one-semester course at the junior high school level which would allow students to discover how businesses operate and to explore opportunities for a career in business. A student data sheet, career survey form, a brief bibliography, and a list of additional resources conclude the document. Along with the curriculum guide, simulations were developed for the jobs of clerk-typist, retail sales clerk, and cashier/accounts receivable clerk. The simulations are not included in the document. Development, \*Physical Education, Preschool Education, Primary Education, Resource Materials, Self Concept, \*Teaching Guides, Teaching Procedures

The learning experiences in the teacher's guide are built on the concept of movement exploration. Self-awareness is realized as students discover potentials for performing basic motor skills and explore creative movement. Intended for use at the preschool and primary levels, the guide suggests and describes ways for the teacher to introduce and develop large and small muscle skills and later relate their use to career information. The career awareness theme is threaded throughout the learning experiences in the form of pantomiming certain occupational roles, pretending or role playing, and games. Involvement in the production of a circus provides practical application of concepts and skills, and opportunities for career awareness. Primary emphasis is on physical education, but teachers may find some of the activities useful in the areas of music, art, and social studies. Each set of learning experiences contains a student objective, set overview, resource list, teacher-preparation tasks, learning activities, and suggestions for evaluation-summary activities. Poster sets and resource sheets accompany many of the learning activities. (Author/KJ)

#### Document Not Available from EDRS

Descriptors—\*Career Awareness, Career Education, \*Grade 1, Individual Development, Integrated Curriculum, Interpersonal Relationship, \*Language Arts, Learning Activities, Resource Materials, \*Self Concept, \*Teaching Guides, Teaching Procedures

That being a self involves being different is the unique focus of the teacher's guide. The learning experiences, developed for use at the grade 1 level, are designed to make each student aware of himself through a variety of activities that point out what is uniquely his: his physical makeup, his family, his friends, his interests, and his school. Using the familiar environment of the school, students assess capability of self in relationship to a variety of assigned classroom tasks and tools. An effort is made to show that a very real and important relationship exists between what a student learns in school and what the student chooses for a career. The subject area for which the materials in the guide have potential is communication arts, i.e., English, speech, and language arts. Each set of learning experiences contains a student objective, set overview, resource list, teacher-preparation tasks, learning activities, and suggestions for evaluation-summary activities. Posters, worksheets, and transparency masters accompany many of the learning activities. (Author/NJ)

Descriptors—\*Career Awareness, Career Education, \*Family Relationship, Grade 1, Grade 2, Grade 3, Integrated Curriculum, Interpersonal Relationship, Language Arts, Learning Activities, \*Primary Education, Resource Materials, \*Self Concept, Social Studies, \*Teaching Guides, Teaching Procedures

Within the context of family and school, students in primary grades are encouraged to deal with an expanded idea of self. The learning experiences in the teacher's guide are designed to help this self become aware of its involvement in an institution called family, and of many different roles played by family members to achieve a variety of goals. Interdependency and responsibility are explored. These basic concepts are then applied to another familiar institution—the school. The concept of occupational roles is carefully developed. The topics covered include: family structure and activities performed at the home, interrelationships of family functions, interdependency and responsibility in the family, role performance in the home, family members and their jobs, living in a school, children in a school, school functions and occupational roles, and interdependency and responsibility in the school. Subject areas for which the materials in the guide have potential are social studies and language arts. Each set of learning experiences contains a student objective, set overview, resource list, teacher-preparation tasks, learning activities, and suggestions for evaluation-summary activities. Worksheets and other resource materials accompany many of the learning activities. (Author/KJ)

Descriptors—Attitudes, \*Career Education, \*Communication (Thought Transfer), Communication Skills, \*Grade 7, Integrated Curriculum, \*Interpersonal Relationship, Language Arts, Learning Activities, Resource Materials, Self Concept, Social Adjustment, \*Teaching Guides, Teaching Procedures

Helping students to recognize and understand their own attitudes and the attitudes and feelings of others, with special emphasis on how those feelings are communicated and dealt with is the purpose of the teacher's guide. Grade 7 students, in decoding each other's messages and discussing attitudes and feelings, discover the complexities of communication. They practice communication skills in role-playing situations and develop adjustment skills needed when interpersonal differences must be resolved. Some of the topics covered include communication symbols, language, the communication process, attitudes, adjustment skills, and identifying interrelationships. The subject area for which the materials in the guide have potential is language. Each set of learning experiences contains a student objective, set overview, resource list, teacher-preparation tasks, learning activities, and suggestions for evaluation-summary activities. Resource materials such as posters, worksheets, transparency masters, and games accompany many of the learning activities. (Author/NJ)

Descriptors—Career Education, \*Career Exploration, Communication (Thought Transfer), Decision Making, \*Grade 9, Group Guidance, Integrated Curriculum, Learning Activities, Resource Materials, Secondary Education, \*Self Concept, \*Self Evaluation, \*Teaching Guides, Teaching Procedures

The learning experiences in the teacher's guide focus on helping students at the ninth grade level develop understanding of themselves as individuals and recognition that others may not perceive them as they see themselves. The materials are best utilized in a group guidance setting. Each student is encouraged to look at himself, to examine his feelings realistically and explore his self-image, and then to try to look at others in the same manner. These concepts are then related to occupational exploration and tentative occupational decisions. The learning experiences give students the opportunity to focus on individual goals and values and then tie together all that they have discovered to form the fullest possible picture of themselves. Career education elements emphasized in the guide are self-awareness, career awareness, and decision making. Each set of learning experiences contains a student objective, set overview, resource list, teacher-preparation tasks, learning activities, and suggestions for evaluation-summary activities. Resource materials include worksheets, evaluation sheets, and transparency masters. (Author/NJ)

Descriptors—\*Career Education, \*Health, Hygiene, Individual Characteristics, Integrated Curriculum, Interpersonal Competence, Job Satisfaction, Learning Activities, Nonverbal Communication, Nutrition, \*Personality, Physical Fitness, Resource Materials, \*Secondary Education, Self Concept, \*Teaching Guides, Teaching Procedures

The learning experiences in the teacher's guide are aimed at helping secondary school students develop an awareness of and an appreciation for their individuality, needs, and jobs. They examine their interaction with others, the role of nonverbal behavior, influences on the personality, personal hygiene standards, nutrition, and physical fitness in that interaction. These concerns are additionally examined in terms of their implications for fulfillment of life roles. Finally the students consider self-satisfaction and work satisfaction—the degree to which they are independent and function as goals in life, and the ways in which they are related to rights and responsibilities of workers. Each set of learning experiences contains a student objective, set overview, resource list, teacher-preparation tasks, learning activities, and suggestions for evaluation-summary activities. Activity-coordinated transparency masters, worksheets, and other resource materials are included. (Author/NJ)

Descriptors—Career Education, \*Career Planning, \*Decision Making, \*Grade 10, Integrated Curriculum, Job Application, Learning Activities, Personal Values, Resource Materials, Secondary Education, Self Concept, \*Self Evaluation, Senior High Schools, \*Teaching Guides, Teaching Procedures

The learning experiences in the teacher's guide are intended to lead the tenth grade student to self-awareness, particularly in relation to the stu-

dent's interests, attitudes, achievements, and values. However, this guide also is applicable to all senior high school students. Each student has the opportunity to explore processes of planning and prerequisites for career decisions. Subject areas for which the materials in this guide have potential are English, language arts, social studies, and communications. Some of the topics covered include: personal interests and achievements; personal and societal values; understanding success; exploring the decision making process; values, needs, and lifestyles; and job applications and interviews. Each set of learning experiences contains a student objective, set overview, resource list, teacher-preparation tasks, learning activities, and suggestions for evaluation-summary activities. Activity-coordinated worksheets are included. (Author/NJ)

The teacher's guide is the first in a series of three developed for primary and early intermediate levels. The learning experiences focus on helping students to develop an understanding of the family as an economic unit, to acquire elementary classification skills, to appreciate the priority families must place on satisfying basic economic needs, and to recognize that there are similarities and differences among the needs and wants of various families. Students are given opportunities to begin to attain self-sufficiency as consumers by learning to read price tags, count money, and make change. Subject areas for which the materials in this guide have potential are social studies and math. Each set of learning experiences contains a student objective, set overview, resource list, teacher-preparation tasks, learning activities, and suggestions for evaluation-summary activities. The teacher's guide is the second of three developed for primary and early intermediate levels. The learning experiences focus on helping the student to develop an understanding of the family as an economic unit and of money as a medium of exchange that facilitates trade; to identify ways of earning, saving, and spending money; to recognize the roles of banking and bank workers in our society; to appreciate the priority families must place on satisfying basic

economic needs; and to discover ways family members can minimize their own and others' expenses. The career education elements emphasized in the guide are general economic and career awareness, economic attitudes and appreciations, beginning economic and decision-making skills, and educational awareness. Subject areas for which the materials in the guide have potential are social studies and mathematics. Each set of learning experiences contains a student objective, set overview, resource list, teacher-preparation tasks, learning activities, and suggestions for evaluation-summary activities. The learning experiences in the teacher's guide are intended to acquaint students at the second and third grade levels with the food industry—the goods and services it provides, the workers it employs, and some of the basic skills the consumer needs. The supermarket, that segment of the food industry most familiar to primary students, is the focal point of study. As they observe and interview supermarket workers on the job, students gain some understanding of the job activities and working conditions. In a culminating activity, students role play customers and supermarket workers, applying arithmetic and reading skills as they make shopping decisions. Subject areas for which the materials in the guide have potential are social studies and mathematics. Each set of learning experiences contains a student objective, set overview, resource list, teacher-preparation tasks, learning activities, and suggestions for evaluation-summary activities. Activity-oriented resource materials are included. (Author/NJ)

In the teacher's guide, learning experiences focus on helping students in primary grades develop their understanding of the interrelationships among businesses, workers, and families through examinations of local stores and businesses and of the workers who work in them. Students are given the opportunity to acquire economical awareness and self-sufficiency. They learn to match needed goods and services to the types of stores and businesses that provide them. They identify and explore the basic business principles of income, expenses, and dependence on workers, customers, and other businesses. The subject area for which the materials in the guide have potential is social studies. Each set of learning experiences contains a student objective, set overview, resource list, teacher-preparation tasks, learning activities, and suggestions for evaluation-summary activities. Activity-coordinated resource materials include worksheets, a game, and evaluation materials. (Author/NJ)

The learning experiences in the teacher's guide are designed to aid primary students in developing an awareness of the personal and social value of work and of the variety of tree-related occupations. The relationship between trees and the people who work with them is presented in a manner that encourages an understanding of both the value of trees to man and the satisfaction of working with them. Students learn about trees and their role in the natural environment, the resources they provide, and ways to conserve them. Subject areas for which the materials in this guide have potential are science, art, music, language arts, and social studies. Each set of learning experiences contains a student objective, set overview, resource list, teacher-preparation tasks, learning activities, and suggestions for evaluation-summary activities. Activity-coordinated resource materials include poster sets, a 25-page flash card set, worksheets, and evaluation instruments. (Author/NJ)

The set of learning experiences acquaints students at the fifth grade level with some of the greatest achievements in the fine arts. While exploring a variety of careers in the graphic arts, students become aware of the tools, materials, and equipment as well as the skills needed to utilize them. Through group activities in the graphic arts, they see the advantages of cooperation and develop an understanding of decision making and

problem-solving. They see how cultural backgrounds and environmental influences determine modes of artistic expression and briefly examine the possible lifestyles and career rewards of persons employed in the graphic arts. Each set of learning experiences contains a student objective, set overview, resource list, teacher-preparation tasks, learning activities, and suggestions for evaluation-summary activities. Activity-coordinated resource materials include information and evaluation sheets as well as other classroom materials. (Author/NJ)

The purpose of the teacher's guide is to acquaint junior high school students with occupations in the life sciences. By identifying life science and exploring the areas of biology (ecology and zoology) and medicine, students may become aware of the functions of the people involved in these areas and the value of their work. The material in the guide may be introduced at the sixth or seventh grade level. Each set of learning experiences contains a student objective, set overview, resource list, teacher-preparation tasks, learning activities, and suggestions for evaluation-summary activities. Activity-coordinated resource materials include evaluation instruments and worksheets. (Author/NJ)

The purpose of the teacher's guide is to acquaint students at the eighth grade level with occupations in the earth sciences. By identifying earth science and exploring geology, oceanography, and meteorology, students may become aware of the knowledge and skills required of workers in these occupations. Students participate in simulated work situations in which they may observe not only the functions of some earth scientists, but the interaction between people in these occupations. Each set of learning experiences contains a student objective, set overview, resource list, teacher-preparation tasks, learning activities, and suggestions for evaluation-summary activities. Activity-coordinated resource materials include transparency masters, evaluation instruments, and resource and worksheets. (Author/NJ)

Identifiers—\*Greeting Cards

The learning experiences in the teacher's guide provide second, third, and fourth grade students at the primary level with the opportunity to participate in the creation and production of greeting cards. Students explore different kinds of

cards and become involved in the production process of a simulated greeting card company. They learn about greeting cards as a form of communication and about the cooperative effort required for mass production. The learning activities are designed to develop an appreciation of the habits and skills required for completing a task: adequate preparation, orderly approach, meeting responsibilities and performance standards, safe work habits, physical skills, recurring production needs, and creativity. Subject areas for which the materials in the guide have potential are social studies, arts, language, and applied math. Each set of learning experiences contains a student objective, set overview, resource list, teacher-preparation tasks, learning activities, and suggestions for evaluation-summary activities. Activity-coordinated resource materials include a poster set, evaluation instruments, and resource and worksheets. (Author/NJ)

The guide is designed to engage fifth and sixth grade students in learning experiences intended to acquaint them with wood construction and mass production. In addition to developing carpentry skills, students learn the safe use of tools, equipment, and materials. While simulating a toy company, they inductively develop processes for the mass production of toy boats and apply marketing principles. In addition, they learn general work-related skills and understanding that concern task planning, interpersonal relations, individual and group work methods, applied mathematics, and decision making. Subject areas for which the materials in this guide have potential include art, social studies, language arts, and math. Each set of learning experiences contains a student objective, set overview, resource list, teacher-preparation tasks, learning activities, and suggestions for evaluation-summary activities. A 30-page student resource booklet titled "Learning About Wood Construction" provides general information and individual project designs for toys that can be made with simple hand tools. Other activity-coordinated resource materials include a poster set, evaluation instruments, and resource and worksheets. (Author/NJ)

Descriptors—\*Adolescents, \*Delinquency Causes, Delinquent Behavior, Family Life, \*Individual Characteristics, Parent Child Relationship, \*Parent Influence, Parents, \*Psychopathology, Research Projects

Identifiers—Minnesota Multiphasic Personality Inventory

This article describes research conducted to determine the influence of parental personality characteristics on the delinquent behavior of adolescent boys. Two groups of parents (N=18 couples, each group) were administered the Minnesota Multiphasic Personality Inventory. Experimental couples' sons had been recognized by the juvenile courts as being delinquent, while control group parents were those whose sons had not engaged in delinquent behavior. Both mothers and fathers of the experimental group parents were found to have more personality disturbance than did parents in the control group. The personality profiles of mothers in the experimental group indicated greater psychopathology than those of the fathers in the same group. (Author/SJL)

What You See May Not Be What you Get—High Risk Students.

Pub Date 73

Note—19p.; Paper presented at the Annual Meeting of the American Personnel and Guidance Association (29th, Atlanta, Georgia, 1973)

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—Admission Criteria, \*College Admission, College Freshmen, \*Individualized Programs, \*Low Achievers, \*Open Enrollment, \*Program Descriptions, Speeches

Identifiers—Davis and Elkins College

This article pertains to program development necessitated by the admission into college of those students who do not meet regular entry requirements. The author briefly describes a number of programs developed by colleges to provide remedial work, reduced academic loads, study skills instruction, and counseling for "high-risk" students. The author then presents the High-Risk Freshman Program of which she is director. The components of this program are individualized and group counseling, reading training, tutoring, art and music therapy, and special social events. The emphasis of the program is away from remediation toward individualized services. This overview of the program is concluded with an evaluation of its merits on the basis of the academic averages of the participants. (SJL)

Senior High Career Education Assessment Instruments Concerning Attitudes.

New Jersey State Dept. of Education, Trenton. Bureau of Occupational Research.

Pub Date Jan 74

Note—7p.

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—\*Affective Tests, \*Attitude Tests, \*Career Education, Changing Attitudes, High School Students, Measurement Instruments, \*Resource Guides, Secondary Education, \*Test Reviews, Vocational Development

This monograph is an evaluation of instruments used to measure attitude change in high school populations. These instruments are also tools for information seeking, and for both individual and group counseling. The instruments evaluated are The California Life Goals Evaluation Schedules, The Occupational Aspiration Scale, Occupational Interests Self-Analysis Scale, The Self-Directed Search, and the Vocational Preference Inventory. Each of these instruments is first described briefly in terms of 14 categories of analysis, and is then given a narrative description, an evaluation of its strengths and weaknesses, and recommendations for use. The Relationship of Racial and Religious Attitudes Among University Students. Research Report 8-73.

Maryland Univ., College Park. Cultural Study Center.

Pub Date 73

Note—13p.

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—\*Attitudes, Caucasians, \*College Freshmen, \*Correlation, \*Racial Attitudes, \*Religious Factors, Research Projects, Sociocultural Patterns

An anonymous religious poll and the Situational Attitude Scale (SAS) were administered to 168 white University of Maryland entering freshmen. The anonymous poll consisted of 29 items pertaining to religious activities, beliefs, and issues. The SAS is an instrument designed to measure attitudes of whites toward blacks in 10 situations. The results of the study indicate that the relationship between religious and racial attitudes depends on the situation involved as well as the type of religious beliefs and sex of the respondent. Those respondents who were active in the church and believed in God and life-after-death tended to show more tolerance toward a black person joining their social group and a black youngster stealing, but were more prejudiced against a black man raping a white woman. Those with more liberal attitudes toward abortion, marrying outside the faith and not engaging in war tended to be less prejudiced, while those holding more conservative beliefs on issues such as the above tended to be more prejudiced. The results were discussed in terms of previous research on racial and religious attitudes. (Author)

Improving Self-Concept: A Possible Aid to Increased Achievement and More Desirable Behavior.

Pub Date Apr 73

Note—21p.; Practicum report submitted in partial fulfillment of requirements for the Ed.D. degree, Nova University

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—\*Achievement, Elementary Education, \*Elementary School Students, \*Low Achievers, Reading Achievement, \*Self Concept, Self Concept Tests, Student Adjustment, \*Student Behavior

A program of instruction was designed to promote positive self-concept in elementary school students in order to test the hypothesis that such self-concept is necessary for academic achievement and desirable behavior. Twenty students who were performing at a year below grade level in reading and math were selected for the study. These students received individual tutoring twice a week for 14 weeks from parent volunteers. Self-concept, achievement, and the behavior of the students were measured before and after the tutoring program. The measurement instruments used were Rotter's Test of Self-Concept, the Wide Range Achievement Test for Reading and Math, and questionnaires administered to teachers. While the results showed increases in achievement and desirable behavior, weaknesses in the design prevent the determination of a clear relationship between these results and positive self-concept. It is suggested that the study be replicated using a control group and other design modifications. (Author)

Evaluation of a Comprehensive Juvenile Delinquency Program.

Pub Date Feb 75

Note—14p.

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**  
**Descriptors—**\*Adolescents, \*Comprehensive Programs, \*Counseling Effectiveness, \*Delinquent Rehabilitation, Disadvantaged Youth, Family Counseling, \*Interdisciplinary Approach, Program Descriptions, Program Evaluation, Urban Youth

This paper describes a comprehensive juvenile delinquency diversion program serving a poverty community in a large urban center, and attempts to evaluate the problems and effects of the program. The target population was primarily minority-group truants, aged 10-15, who had been in trouble with the authorities. The program included recreational and counseling components, utilized an interdisciplinary approach, maintained family counseling services, and at times interfaced with other institutions. Physical activities such as trips, were provided. The program utilized status groups to provide graded rewards and peer group pressure towards increasingly appropriate behaviors. Team conferences were held to provide consistency in approach and sharing of information among the interdisciplinary staff. These conferences eventually became a training vehicle for staff members. Problems in the program included: (1) integrating the interdisciplinary staff; (2) determining the exact purpose of the project (therapy or education); (3) behavior modification; and (4) inadequate mobilizing of the community and its institutions to provide better treatment and programs for the youths. The program was quite successful as measured by offense statistics (fewer contacts with juvenile justice system up to six months after program) and satisfaction among parents and clients. (NG)

**Personality and Achievement of Athletic and Non-Athletic High School Girls.**  
 Pub Date May 73

Note—17p.

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**  
**Descriptors—**\*Academic Achievement, \*Athletics, \*Females, Grades (Scholastic), \*Personality Assessment, Physical Education, \*Research Projects, Secondary Education  
**Identifiers—**California Personality Inventory, \*Canada

This study investigated personality and academic achievement differences between athletic and non-athletic ninth and tenth grade girls in a Canadian school. Athletes participated in at least one of four interscholastic sports while the non-athletes were involved in only activities associated with a required Physical Education course. Differences between the groups on 14 scales of the California Personality Inventory were analyzed by means of the t test. Chi-square analyses were conducted on the distributions of year-end letter grades in English, Mathematics, Physical Education, Science and Social Studies. The results indicated that at both grade levels athletes rated significantly higher than non-athletes on the personality factors of dominance, sociability and achievement via conformance. At the ninth grade level, the athletes obtained a significantly larger proportion of high grades in all subject areas than did the non-athletes. At the tenth grade level, the distribution of letter grades in Science and Physical Education were significantly different between the two groups, with more of the high grades being awarded to the athlete group. **Descriptors—**Adults, \*Community Programs, \*Criminals, \*Intervention, Justice, Law Enforcement, \*Legal Problems, Literature Reviews, \*Program Evaluation  
**Identifiers—**\*Diversion Programs

This monograph explores, through two studies, the major issues and mechanics of adult pre-trial intervention programs for non-addict criminal defendants. Part I draws upon an evaluation of research on pre-trial services which aimed at: (1) evaluating the internal and external validity of

each study; (2) evaluating the policy utility of specific studies bearing on given policy instruments; and (3) providing decision makers with an assessed research base for alternative policy actions. The complete results of this study are reported in two volumes referenced in the bibliography. Part II describes the mechanics of the pre-trial intervention design in three communities, based on available documentation and brief on-site visits. The section includes: (1) an overview of the major operating components of all three programs, highlighting both their common and distinctive features; and (2) separate descriptions of the selection, service delivery and termination procedures at each site. The specific programs are presented merely as being illustrative of the intervention design. (Author/SE)

**Descriptors—**\*Child Advocacy, Early Childhood Education, Political Influences, Program Descriptions, \*Program Evaluation, \*Project Applications, \*Public Relations, \*State Agencies, Summative Evaluation, \*Systems Approach

This report evaluates the Systems Advocacy Model embodied in the operation of the Connecticut Child Advocacy Center (CCAC). The study was undertaken in order to: (1) describe the advocacy model used and compare it with other models in terms of relative effectiveness in meeting specific objectives; (2) determine the means used by the CCAC to arrive at an assessment of needs and to ascertain whether its goals correspond to those defined needs; (3) delineate the specific goals of CCAC and processes engaged in to achieve them; and (4) describe formal and informal channels of collaboration with state services and other groups relevant to the advocacy process. This evaluation report describes the program, and the policies and procedures used to assess the program's quality of service, coordination of services, potential persistence of effects and areas of possible replicability. Recommendations for future implementation of this advocacy model are presented. (Author/SJL)

Pub Date Mar 75

Note—63p.; Master's thesis, Naval Postgraduate School

Available from—National Technical Information Service, 5285 Port Royal Road, Springfield, Virginia 22161 (order number AD-A009 819, HC \$4.25, MF \$2.25)

**Document Not Available from EDRS**

**Descriptors—**\*Behavior Patterns, \*Changing Attitudes, \*Employment Patterns, \*Females, Masters Theses, Military Personnel, Personnel, Research Projects, \*Role Perception, \*Working Women

The perception of what are considered acceptable occupations for women has changed considerably over the last century, just as the role of women in American homelife has changed. This thesis researches the changing role of American women and the effects of this changed role on occupations outside the home. The emphasis is on the long-term effects for military and civilian women brought about by the two World Wars. The effects of industrialization on women's roles are explored, as are the effects of modern day pressures on the employer to change past hiring practices. Some predictions for women in the future are made. (Author)

**Sex Differences in University Freshmen Attitudes and Behavior toward Drugs: A Three Year Comparison. Research Report Number 8-74.**

Maryland Univ., College Park. Counseling Center.

Report No—RR-8-74

Pub Date 74  
 Note—14p.

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**  
**Descriptors—**\*Behavior, \*College Freshmen, \*Drug Abuse, Higher Education, Research Projects, \*Sex Differences, \*Student Attitudes, Surveys

Sex differences in the attitudes and behavior of entering freshmen toward 13 drugs were examined through the administration of anonymous polls at the University of Maryland during three consecutive years, 1972-1974. The polls were designed to investigate the incidence and frequency of drug use; the students' reasons for using and not using drugs; and student attitudes toward drug legalization, the illegal sale and use of drugs, and the University's role in providing drug-related services. Results suggested distinct differences between males and females, particularly in their patterns of drug use. The incidence of drug use and regular use were found to be fairly stable for males and increasing for females over the three years sampled. Beer and marijuana however, reflected increases in incidence and frequency of use for both sexes. Significant sex differences were also found in 6 of 15 attitude items. In general, women seemed to be more conservative in their attitudes. Reasons for usage and non-usage were similar for males and females. (Author)

The Counselor's Information Service is a quarterly publication of the B'nai B'rith Career and Counseling Services. This annotated bibliography of current literature on educational and vocational guidance provides the names and addresses of the publishers of the material reviewed and the cost of each publication. The reviews are organized according to the topic areas of occupational information: educational, vocational and personal guidance, guidance administration and procedures, student aids, aids for the teacher, guidance material—free or inexpensive, adult education and the aging, handicapped and rehabilitation counseling, the counselor's bookshelf, and periodicals in guidance and related fields. **Screening for Adaptability to Military Service. Final Report for Period July 1974-April 1975.**

Air Force Human Resources Lab., Lackland AFB, Tex. Personnel Research Div.

Report No.—AFHRL-TR-75-30

Pub Date May 75

Note—32p.

**EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage**

Descriptors—\*Adjustment (to Environment), Institutional Research, \*Military Personnel, Military Service, \*Personality Assessment, Personality Tests, \*Personnel Selection, \*Screening Tests

Identifiers—\*History Opinion Inventory

A sample of 15,252 basic airmen were administered the History Opinion Inventory (HOI) during basic military training. This 100-item self-report inventory was designed to tap dimensions of school adjustment, family stability, social orientation, emotional stability, bodily complaints, motivations and expectations for achievement, and response toward authority. The service careers of the subjects were then monitored for two years in order to assess the ability of the HOI to predict the criterion of in/out service. An a priori adaptation index developed from HOI items correctly identified as high risk 23 percent of those subjects discharged from service during the two-year period, while incorrectly labeling as high risk only 6 percent of those subjects still in service after two years. The possibility of increasing the accuracy of prediction by utilizing biographic/demographic data is discussed along with the operational usefulness of the History Opinion Inventory. (Author)

Descriptors—Cognitive Development, \*Concept Formation, Educational Improvement, \*Instructional Programs, \*Learning, Program Development, \*Programed Instruction, Research Needs, \*Task Analysis

A review of task analysis procedures beginning with the military training and systems development approach and covering the more recent work of Gagne, Klausmeier, Merrill, Resnick, and others is presented along with a plan for effective instruction based on the review of task analysis. Literature dealing with the use of task analysis in programmed instruction designed to teach concepts and principles is summarized. Topics relating to instructional objectives and the organization of subject-matter knowledge, learning hierarchies, hierarchical dependency in cognitive development, and instructional analysis and sequencing are examined from a task analysis perspective. Research recommendations and critique are provided. (Author)

Descriptors—\*Concept Formation, \*Educational Experiments, Elementary Education, Grade 4, \*Instructional Design, \*Learning, Performance Factors, Research Projects, \*Task Analysis

An instructional design based on task analysis procedures was used to develop two experimental lessons to accelerate attainment of a subject-matter concept by fourth grade students. A variation of the Solomon Four-Group design was employed to determine the effects of the pretest. Performance of 118 randomly assigned subjects on a measure assessing two levels of concept mastery showed that experimental groups performed significantly better at both levels than control groups. Effects of the pretest were not significant. A two-month follow-up assessment revealed highly comparable results. (Author)

Identifiers—Elementary Secondary Education Act Title III, ESEA Title III, PACE, \*Projects to Advance Creativity in Education

This handbook discusses the various aspects of discipline (defined as the teaching of a child to behave in ways that the parent considers desirable and avoid behaving in ways the parent considers undesirable). The guide discusses the Adlerian approach to disciplining children, which stresses democracy in the family on the basis of the equality of individuals. The Adlerian approach uses natural and logical consequences as a discipline for the child, rather than the power of the parent; encouragement of the child is also important along with parental action. To understand better how parents discipline their children and what kind of behaviors are disciplined, several suggestions are made for observing and analyzing specific parent-child interactions. Mutual problem solving, a method by which both parent and child can solve their conflicts by finding solutions acceptable to both, is recommended for parents. The handbook has an appendix about behavior modification, with behavior charts and rating scales. (Author/SE)

Identifiers—Elementary Secondary Education Act Title III, ESEA Title III, PACE, \*Project to Advance Creativity in Education

The PACE project is directed to all students in grades 4-6 in the Mehlville School District (St. Louis, Mo.). The major purpose of the project is to involve students in an enrichment program to develop skills in self-understanding and in effective communication with parents and others, and is based on the idea that there is a need for a more adequate understanding of communication skills between child and parent. This handbook has been designed for the teacher to use in a fourth-grade classroom setting and includes units in awareness, communication, and family. The activities are intended to take from 45 to 60 minutes each, once a week for 12 weeks. Examples of handout sheets are included. (Author/HMV)

**Descriptors—**Behavior Patterns, \*Classroom Observation Techniques, \*Classroom Research, Grade 7, \*Interaction Process Analysis, \*Junior High Schools, \*Psychoeducational Processes, \*Research Projects, \*Student Teacher Relationship, \*Teacher Characteristics, \*Teaching Styles

**Identifiers—**\*This I Believe Test  
 This study investigates sociopsychological variables in an educational context. The question of interest concerns the relationship between the conceptual complexity of teachers and the type of teacher-student interaction in the classrooms. Specifically, this study asks if a teacher's belief system is related to a pattern of asymmetrically or reciprocally contingent interaction between teacher and students in the classroom. To assess the extent of reciprocally versus asymmetrically contingent interactions in classrooms, the Hit-Steer observational system was devised, which is designed to reveal the patterns of teacher and pupil interaction, especially the extent to which the behavior of the teacher and pupil interaction, especially the extent to which the behavior of each is contingent on the behavior of the other, by assessing the number of times a teacher or pupil attempts to influence ("hits") the other and whether the other modifies his behavior as a result of the "hit" (whether the other "is steered" or not). Thirty-three seventh-grade classrooms were selected for intensive observation. Results indicate that teachers who function in a relatively concrete and rigid way tend to be more directive and controlling than others, and they tend to dominate classroom interaction. **Descriptors—**Crisis Therapy, \*Educational Programs, \*Family Problems, \*Instructional Programs, \*Intervention, \*Law Enforcement, \*Police, \*State of the Art Reviews

One of the most hazardous assignments police officers face is dealing with family quarrels and disturbances. In 1972, 13 percent of all policemen killed in the line of duty died while responding to disturbance complaints. Despite these dangers, techniques for dealing with such crises are rarely included in police recruit and in-service training programs. The feasibility of training police as specialists in family crisis intervention was first tested by the Office of Law Enforcement Assistance in 1967. The National Institute of Law Enforcement and Criminal Justice believes that crisis intervention training can enhance police safety and make police service more responsive to community needs. The institute has prepared this monograph to explain the concept underlying the training and to discuss some guidelines and problems in organizing a training program. (Author/HMV)

**The Impact of Peer Pressure on the Verbally Expressed Drug Attitudes of Male College Students.**

Pennsylvania State Univ., University Park. Addictions Prevention Lab.

Spons Agency—Governor's Council on Drug and Alcohol Abuse, Harrisburg, Pa.

Pub Date 75

Note—13p.; Paper presented at the Annual Meeting of the American Educational Research Association (Washington, D.C., March 30-April 3, 1975)

Available from—American Journal of Drug and Alcohol Abuse; v2 n2 p231-243 1975

**Document Not Available from EDRS**

**Descriptors—**Behavioral Science Research, \*Behavior Patterns, \*College Students, \*Drug Abuse, \*Peer Acceptance, \*Peer Relationship, \*Psychological Patterns, \*Research Projects, \*Socially Deviant Behavior, \*Student Attitudes

Peer pressure was shown to have a powerful influence on the verbally expressed drug attitudes of the undergraduate male sample. Subjects exposed to a group which consistently espoused either conservative (anti-drug) or liberal (pro-drug) attitudes toward the personal use of drugs were highly likely to conform to the groups attitudinal norms. Effects of natural peer groups are discussed along with recommendations for primary prevention programming and further research. (Author)

**Descriptors—**Basic Skills, Behavior, \*Biochemistry, Conferences, Development, \*Educational Improvement, \*Learning, \*Memory, \*Nature Nurture Controversy, \*Neurological Organization

The National Institute of Education takes a fundamental approach to the problems it is addressing. This implies the creation of an intellectual framework for the problem areas, which can be used to systematize existing knowledge and research approaches and suggest promising new directions for research and development. Neural mechanisms of learning and memory constitute the ultimate foundations upon which learning of basic skills rests. This conference grew out of such concerns. Twenty review papers were

**CG 010 204**

prepared and circulated in advance by leading investigators, each describing a major research approach, well-established findings, current gaps in knowledge, current research efforts and near-future prospects, and relations to other approaches. At the conference, presentation of highlights of each review by its author was followed by a prepared discussion of the paper by another leading investigator, and then by general discussion. The review and discussion papers, revised on the basis of discussions at the conference, will be published as the report of the Conference in late 1975 by the MIT Press. The report, in addition to being very useful to investigators in the field and to students, will be used by NIE in formulating its policy on future support of research in this area. (Author/CKJ)

This study compared the arrays of high interest occupations produced by the Strong Vocational Interest Blank, T-399 and the Kuder Occupational Interest Survey, Form DD when the instruments were administered to the same Subjects. Holland type Summary Codes were devised from the arrays of occupations and were analyzed by correlated t tests and Pearson r correlations. A frequency percent count showed 85 percent of the pairs of Summary Codes had two identical characteristics and some support was found for Holland's hexagon. The implications for future studies comparing the two instruments were discussed. (Author)

**Behavior Modification: A Model for Implementation of Theory in a Problem Situation.**

Pub Date May 75

Note—35p.; Paper submitted in partial fulfillment of the requirements for the Ed.D. degree, Nova University

**EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage**

**Descriptors—**Achievement, Behavioral Objectives, \*Behavior Change, \*Continuation High Schools, \*Emotionally Disturbed, \*Models, \*Reinforcement, \*Secondary Education, \*Student Behavior, \*Study Skills

The purpose of this practicum was to develop, implement, and evaluate a system of behavior modification on a school-wide basis. The system developed was that of a token economy. Baseline data was gathered during the first three school months on behaviors identified as "avoidance." The system was implemented during the fourth school month and comparative data generated during the fourth and fifth school months. Target behaviors identified were increased punctuality, increased productive hours, and increased credit production. The system generated significant increases in credit production and productive hours but was not as successful in the area of punctuality. (Author)

**Women in the Job Interview: Survey of Employers 1973-74.**

Michigan Univ., Ann Arbor. Career Planning and Placement Office.

Pub Date [74]

Note—26p.

**EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage**

**Descriptors—**Attitudes, \*Employer Attitudes, \*Employment Interviews, \*Equal Opportunities (Jobs), \*Females, \*Placement, \*Sex Differences, \*Sex Discrimination, Surveys

The present survey aimed to find out the opinion of employers on how women performed in employment interviews. The question raised was, "Are there any behaviors more common to women than men that are considered undesirable

in an applicant and thus are hindering women applicants' chances of being hired?" An eight-page questionnaire was prepared to elicit employers' comments on various issues relating to women as applicants for employment. The employers in the sample represented various segments of industry, business, government and education. The following are the main results obtained: (1) employers reported that women's career goals and plans for the future are more short-term than men's goals; (2) marital status hindered advancement of women into management and a few other areas; (3) most respondents reported that women are more nervous and sometimes less confident during interviews than men are; (4) generally, female employers responded more liberally and tended to see no significant differences between men and women in a number of areas; and (5) most employers in the study seemed to be sincere in their efforts to afford women equal consideration in the employment interview and the hiring process. **Discriminantly Valid Personality Measures: Some Propositions. Research Bulletin No. 339.**

University of Western Ontario, London. Dept. of Psychology.

Report No.—ISSN-0316-4675; R Bull-339

Pub Date Sep 75

Note—15p.

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

**Descriptors**—Discriminant Analysis, \*Measurement, \*Personality Assessment, Personality Theories, \*Predictive Validity, Psychometrics, Situational Tests, Symposia, \*Test Validity

Starting with the premise that the construct-oriented approach is the only viable approach to personality assessment, this paper considers five propositions. First, a prerequisite to generalizable and valid psychometric measurement of personality rests on the choice of broad-based constructs with systematic univocal definitions. Next, measures will be likely to demonstrate convergent and discriminant validity and relative freedom from desirable bias if, and only if, these requirements are incorporated into test construction. Third, untrained item writers produce more valid personality scales than do empirical procedures using extant pools. Fourth, convergent and discriminant validity of personality measures is demonstrable even in the face of confounded method variance, and last, a potentially fruitful avenue for further investigation is the demonstration of a number of reproducible sets of psychopathological types. Evidence supporting each of the above propositions is discussed. Some areas of research needing attention are outlined. (Author)

**Lord of the Flies: An Ethological Study of Dominance Ordering in a Group of Human Adolescents.**

Pub Date Apr 75

Note—17p.; Paper presented at the Biennial Meeting of the Society for Research in Child Development (Denver, Colorado, April 10-13, 1975)

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

**Descriptors**—\*Adolescents, \*Behavior Patterns, \*Group Structure, Organization, Peer Relationship, \*Power Structure, Research Methodology, \*Sociometric Techniques, Summer Programs, Teenagers

**Identifiers**—Dominance, \*Ethology

A stable, ordered dominance hierarchy was found via observational and sociometric methods for a group of 13-year-old boys during a five-week summer camp. This group structure was formed early in camp and was stable across settings, time, and types of dominance interactions. The hierarchy correlated significantly with the rank-orderings bed position and hiking position and highly, but not significantly, with athletic ability, physical fitness, chronological age, and late popularity. Group characteristics and individual differences are noted, especially in regard to the alpha and omega individuals. The dominance hierarchy appears to serve in the reduction of antagonistic behaviors and, on an individual level, to provide knowledge of where one's place is among one's peers. (Author)

**Descriptors**—Correlation, Interpersonal Competence, \*Maturity Tests, \*Personal Adjustment, Personality Assessment, \*Personality Tests, Rating Scales, Research Projects, \*Self Congruence, Social Maturity, \*Test Validity

**Identifiers**—\*Psychological Maturity (PSM) Inventory

Two studies were conducted to explore the convergent and divergent validity of the Psychosocial Maturity (PSM) Inventory. The Individual Adequacy subscales were found to be highly related to measures of personal adjustment while the Social Adequacy and Interpersonal Adequacy subscales showed lower correlations with these measures. The results indicate that the Individual Adequacy scales demonstrate the concept-predicted association with personal well-being. Furthermore, the results demonstrate the distinctiveness of the Individual Adequacy scales from the others. (Author)

**Descriptors**—\*Adolescence, Case Studies, \*Maturity Tests, Personality Assessment, \*Personality Tests, \*Psychological Patterns, Research Projects, \*Self Esteem, Social Psychology

**Identifiers**—\*Psychosocial Maturity (PSM) Inventory

Forty-one subjects who score at the high and low extremes of the Psychosocial Maturity (PSM) Inventory were intensively interviewed. These interview data were analyzed to contrast the phenomenological and psychodynamic forces in the lives of these subjects that influence their current state of psychosocial maturity. Case material is presented. Discussion focuses on the interplay between the processes of adolescent ego development and the traits of psychosocial maturity. The growth of impulse control, increases in self esteem and gains in autonomy are all found to contribute to greater maturity. Heterosexual behavior, by contrast, bears a more complex relationship to psychosocial maturity in adolescence. Implications for theory are discussed with respect to psychoanalytic and Eriksonian literature. (Author)

**EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage**

**Descriptors**—\*Achievement, Elementary Secondary Education, Models, \*Occupational Aspiration, \*Peer Relationship, Performance Factors, \*Sex Differences, Sex Discrimination, \*Task Performance

Major sex differences in occupational and educational attainment are summarized and a rationale and supporting evidence presented for reducing such sex differences by strengthening

across-sex task interaction and reward interdependence in school classrooms, thus strengthening across-sex peer influence. An experimental design is suggested, though not implemented, which would analytically separate the effects of cooperative and competitive task interaction from those of positive and negative reward interdependence. Thus, it is hypothesized that both task interaction and reward interdependence would contribute to strengthening across-sex task-related interaction outside of the formal task-reward setting. Appendix A includes student self-report measures of the dependent variables of interest, and Appendix B discusses several problems encountered in reviewing the literature on sex differences and sex discrimination. In 1972, a Student Advisory Board (composed of high school students) was created in Pennsylvania. Students proposed projects in areas that concerned them, formed small committees, and through interviews with relevant or influential people, fact-finding, and assessment of available material and responses, prepared reports and recommendations. It is hoped that some of these reports will be disseminated among all students. This paper contains the student reports on the 1974-1975 projects and deals with college testing, communications, competency-based education programs, school climate, student participation, and teacher observation/evaluation. This report describes a project dealing with the development and implementation of a model for training the interpersonal aspect of competence. The project had four purposes for the student participants: (a) increase the interpersonal competence of students who previously exhibited deficiencies in interpersonal relations; (b) lessen the communication problems between students and teachers and between students of different ethnic groups; (c) reduce student perceptions of rejection by their peers; and (d) develop more positive attitudes toward school, teachers, and students of the other ethnic group. In Phase I, specially selected students were trained both in the implementation of an interpersonal relations training model and in the conduct of small discussion groups of peers. In Phase II, these selected students served as interpersonal relations training group leaders in conducting the training program for volunteers from the high schools in the Taylor County, Georgia school system. The effectiveness of the training program in accomplishing the specified purposes was evaluated by means of several questionnaires developed for this project. The results showed that the training program had a significant behavioral impact upon the student participants. (Author)

Identifiers—\*Georgia (Taylor County)

This document describes the procedures which were followed in conducting a training program in the Taylor County, Georgia Public School System. The program which was conducted focused on training high school students in performing appropriately assertive behavior in various social situations. In this program, a number of high school students were selected on the basis of their leadership potential and emotional maturity. These students were given assertive training, as well as training and practice in the conduct of discussion groups. This activity constituted Phase I of the project. Phase II consisted of assigning other students volunteering to participate in the training program to discussion groups, each of which had 10-13 members. Each group was led by two of the students who had been trained in Phase I. While the foregoing describes the approach used in the Taylor County project, the material presented in subsequent sections can be modified to fit other requirements. One modification which occurred in the course of this project was an expansion of the initial focus on appropriately assertive behavior to one which included all aspects of interpersonal relations. Descriptors—Alcohol Education, Bibliographies, \*Curriculum Guides, \*Drug Abuse, \*Drug Education, \*Grade 7, Instructional Materials, \*Junior High Schools, Reference Materials, Resource Guides, Secondary Education, \*Teaching Guides, Tobacco

The primary bulletin outlines a teaching program for seventh-grade students on drugs and drug abuse, and is designed to supplement the school science curriculum. The program is directed towards providing factual information about various drugs and appropriate techniques that the teacher needs. It also provides appropriate learning experiences for the student. Stress is placed on the physical nature of the drugs and their physiological effects on the human body. It is hoped that this approach will ensure that students will become aware of the effects of drug abuse on the individual, his family, his community and society as a whole. Suggestions are offered as to potential community resources that could be utilized as consultants and guest speakers. The guide is organized into two sections for each drug: a teacher information section and a teaching unit. The supplementary bulletin contains a bibliography of drug literature, tests for students, tables of drug characteristics, slang and technical terms, drug abuse symptoms, and Maryland laws on drug abuse. Process Analysis, Program Descriptions, Research Projects, Social Factors, \*Student Behavior

This report was prepared for the Dothan City Board of Education by the Human Resources Research Organization to describe work done as a part of the Dothan City Schools' project "Comprehensive Services for Socio-Emotional Conflict," a three-year project which had as its fundamental objective the reduction of undesirable effects of socio-emotional conflict suffered by students. Principally, this report describes the effect of a special in-service training program for elementary school teachers on selected classroom behaviors of students. In addition, it describes a method of training lay observers to collect classroom behavioral data. (Author)

Descriptors—\*Counseling Effectiveness, \*Counselor Characteristics, Counselors, \*Creative Expression, \*Creativity, Research Projects, Social Values, \*Values

Ninety-two graduate students in counseling and psychology were asked to respond to tasks measuring creative expression and certain value constructs. Significant, although minimal, correlations occurred between some factors of creativity and values. The value scale produced two opposing value factors for this sample of counselors. Results suggest that the development of divergent thinking processes may be an educational process useful in the development of more effective counselors. (Author/CKJ)

Identifiers—\*Michotte (Albert)

Albert Michotte, known primarily for his research in perception, also carried out several experiments in logical memory (conceptual or intellectual memory). He was strongly influenced by Kulpe, feeling that the thought processes were autonomous, in contradiction to more traditional and elementary conceptions of mental activity. His experiments, using paired-associate techniques to study the place of thought in logical memory, made note of time to complete each word pair; interval between presentation and test; and the subjects' introspections about the experience, perceptions of the word pair, and trains of thought engendered by the presentation of a single word. Significant findings were the different patterns of conscious phenomena each subject used in recalling the second word of the pairs, regardless of almost identical recall accuracy, and the large number of intermediary phenomena (relational and non-relational thought, visual imagery, and false words) that made up the recall process. Michotte concluded that relational thought was necessary to logical memory, but that it could not stand alone. Michotte's emphasis on memory as a contributor to action (one experiment was carried on in everyday situations instead of the laboratory) and his discovery of the multiplicity of means by which different individuals arrive at the same outcome are still of significance to current memory research. Identifiers—\*Effective Reading Programs, Elementary Secondary Education Act Title I, ESEA Title I, Right to Read

This program, included in Effective Reading Programs... serves approximately 500 pupils in kindergarten through grade six who are eligible for Title I services. About 50 percent of the students are black and about 50 percent are white. Pupil selection is based on low reading capability as determined by test scores, pupil performance, or teacher judgment. The program's content and instructional system were developed by the project coordinators using a commercially available phonics program. They divided the content into 25 modules that described terminal behaviors. A series of tasks for each module was prepared. For each task a set of pupil performance objectives was generated, and from the objectives, Quality Control Check Tests were developed. The program is carried out by the regular classroom teacher, who ensures that 30 minutes a day is devoted to the program. The instructional system consists of six steps: becoming familiar with the task, teaching the skills, performing the skills, taking the Quality Control Check Tests, recycling the particular tasks, and achieving mastery. Following mastery of the materials, the student goes on to become a peer instructor for other students entering the sequence. (WR/AIR)

Descriptors—\*Aural Learning, Cognitive Processes, Elementary Education, Elementary School Students, \*Learning Modalities, \*Memory, Mental Development, Reading Research, \*Recall (Psychological), Retention, Verbal Learning, \*Visual Learning

The purpose of this study was to determine whether children as young as second-graders could encode categorically within an abstract evaluative dimension. The study uses mode of stimulus presentation (auditory or visual) as an independent variable. The subjects were 40 white middle class children from grades 2, 4, and 6, who were randomly assigned to one of four experimental conditions. A control group received four trials of words from the same subjective category. Interference between trials followed Wicken's release from proactive interference paradigm and consisted of a color naming distractor task. An experimental group received three trials of words from the same subjective category with a shift to another category on the fourth trial. The interference remained the same. Subjects were asked to recall the words after a 15 second interference duration. Some of the results indicated that the experimental groups at each grade level show an increase in recall from trial 3 to trial 4. Significant main effects were found for overall recall performance between grades and across trials. The mode of presentation did not appear to have a differential effect on the children's encoding at any grade level. (MKM)

ture, Elementary Education, \*Reading Interests, Reading Level, \*Reading Materials, Reading Material Selection

The books in this annual listing have been reviewed and selected by the Children's Book Committee, a voluntary group of parents, teachers, librarians, writers, and specialists in various related fields. The listing contains books written for the nursery years through age thirteen. Titles are arranged, for the most part, according to age groups and are further differentiated into topical divisions which are reflective of the interests and abilities of children. Non-fiction books of information are listed in topical groupings under a special interest heading. Other sections include collections, poetry, holidays, books for parents and children, reprints and new editions, and paperback reprints. Each listing contains bibliographic information, a brief annotation of the book, and the suggested age level. Starred titles indicate books considered by the Committee to be of outstanding merit. Descriptors—\*Curriculum Development, Decoding (Reading), Developmental Reading, \*Inservice Teacher Education, Reading Comprehension, \*Reading Instruction, \*Remedial Reading, Secondary Education, \*Secondary School Teachers, Study Skills

A 30 hour remedial reading workshop, designed for all secondary language arts teachers and for selected secondary teachers in all subject areas, is described in this report. The workshop was designed for teachers in the Pamlico County (North Carolina) Schools by members of that school system and the General Assistance Center at East Carolina University. The first three sessions were devoted to investigation of the reading problem and resulted in a decision to design a reading workshop for students to be implemented into the curriculum. Sessions 4-10 were then devoted to formulating a rationale to govern the course, writing behavioral objectives, developing strategies to achieve those objectives, and then selecting materials with which to implement the strategies. The syllabus for the proposed course is included in the report. (MKM)

Descriptors—\*Achievement Tests, Adult Basic Education, Adult Education Programs, Adult Reading Programs, Critical Reading, \*Equivalency Tests, \*High School Equivalency Programs, Reading Comprehension, Reading Instruction, \*Reading Materials, Reading Skills, \*Taxonomy, Vocabulary Development, Word Study Skills

Identifiers—\*General Educational Development Test

This taxonomy was developed as a tool to be used by instructors as an efficient system to guide them in preparing their students for the Test of General Educational Development (GED). The focus is on the development of those reading skills considered to be critical for the student to have mastered in order to successfully complete a high school equivalency program. The first stage of the system is an inventory of an individual's reading skills, based on the Iowa Test of Educational Development, either form X-4 or Y-4. The second stage is a prescription of materials that could be used to introduce and reinforce any of the skills the student has not mastered. Three New York State Education Department publications and six commercially available programs are keyed to specific reading skills. The materials range in difficulty from a seventh grade reading

level or lower level reinforcement to a twelfth-fourteenth grade reading level or upper level reinforcement. Suggestions for GED test simulation are offered. The general reading skills listed are vocabulary development, ability to interpret reading materials in the social studies and natural sciences, and ability to interpret literary materials. (MKM)

**The Math Student/The Math Teacher/The Math Problem.**

Pub Date 75

Note—10p.; Paper presented at the Missouri Council of Teachers of Mathematics (October, 1975)

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—Concept Teaching, \*Content Reading, Elementary Secondary Education, \*Mathematics Instruction, \*Mathematics Teachers, \*Questioning Techniques, Reading Comprehension, Reading Instruction, Reading Skills, \*Students, Study Skills

Identifiers—\*RQ Procedure

In an examination of the problem of national mathematical illiteracy, the math student, the math teacher, and the math problem are discussed. The math student may have defects, deficiencies, disruptions, and/or differences in the cognitive abilities required to perform a mathematical problem. The math teacher may tend to be less verbal and less socially responsive than other teachers. Math teachers also may have internalized mathematical reasoning and its accompanying numerical coding and notation so that they can hardly understand the primitive state of most students and many adults and thus students tend not to question, but instead accept math as a closed system. The math word problem poses a barrier to learning because of the new words and notations and the complex language and terse sentences. An approach to these problems which involves the student, the teacher, and the problem is the R/Q procedure, a variation of the R/Quest procedure developed by Manzo. The R/Q procedure is a questioning strategy carried out between teacher and student in which they both read each sentence of the problem and then ask each other questions about the problem until the student is ready to solve the problem. (MKM)

**Credible Variables Which Relate to Teacher Effectiveness in Reading Instruction.**

Pub Date Nov 75

Note—10p.; Paper presented at the Annual Meeting of the National Council of Teachers of English (65th, San Diego, California, November 28, 1975)

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—Academic Achievement, \*Effective Teaching, Elementary Education, Reading Improvement, \*Reading Instruction, \*Reading Programs, \*Reading Research, \*Research Methodology, Teaching Methods

This paper briefly reviews recent reading research which is based on the concept of first identifying effective reading teachers in terms of students' reading achievement and then considering process variables (instructional strategies) which could account for the students' achievement. It is suggested that the advantage of this research approach over approaches which identify variables and then attempt to establish a relationship to student achievement is that the variables under investigation deal more directly with those which relate to student achievement, and this direct relationship is important if progress is to be made toward identifying the effective reading teacher in relation to the total reading program. (LL)

**Impact of Oregon Education: A Pilot Assessment of Reading 1974; Oregon Statewide Assessment Program. General Report [and] Executive Summary.**

Oregon State Dept. of Education, Salem.

Pub Date Nov 74

Note—53p.

EDRS Price MF-\$0.76 HC-\$3.32 Plus Postage

Descriptors—\*Educational Assessment, \*Evaluation Methods, \*Reading Achievement, Reading Comprehension, \*Reading Programs, Reading Research, \*Reading Skills, Vocabulary

Identifiers—\*Oregon

This report provides a description of the steps in planning the assessment of reading on a statewide basis. Work on the 1974 Oregon Statewide Assessment Program began in September 1973 and culminated in a set of reports and related informational packets in November 1974. The assessment plan involved the following procedures: selection of 25 reading objectives grouped into the four areas of word attack, vocabulary comprehension, and application skills; selection of 96 items for a reading test; sampling of a scientifically drawn sample of fourth grade pupils; testing; analysis of the assessment data; and review and interpretation. Results of the testing are discussed and recommendations for action are proposed. Some of the findings are that the general performance across the state was good; the relative performance of the district types was consistent across the four skill domains; and the performance across the state was lower for comprehension and application skills than for word attack and vocabulary skills. Numerous tables and graphs illustrate the findings of the assessment. (MKM)

**The Reading Process: A Selective Review of the Literature. Reviews of Research, No. 3.**

Maryland State Dept. of Education, Baltimore. Div. of Research, Evaluation, and Information Systems.

Pub Date Sep 75

Note—48p.

EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage

Descriptors—\*Bibliographies, Elementary Secondary Education, Language Role, \*Literature Reviews, \*Models, Reading Comprehension, \*Reading Processes, Reading Programs, \*Reading Research

The principal purpose of this publication is to present a selected review and synthesis of the literature on the reading process. Section one describes an overview of the reading process. Various models of reading acquisition and their implications for reading are presented in section two. Section three considers a number of practical elements necessary when planning the classroom programs, K-12. Among the topics discussed are: learning to read, two definitions of reading, the value of reading, the nature and purposes of language, language as a vehicle of communication phonemes, morphemes, nativistic models, cognitive models, syntactic models, semantic models, developing the cognitive structure, developing comprehension processes, and accomplishing declared reading goals. An extensive bibliography is included. (TS)

**A Conceptual Research Model for Identifying Effective Teachers of Reading.**

Pub Date 75

Note—12p.; Paper presented at the Annual Meeting of the College Reading Association (Bethesda, Maryland, October 31, 1975)

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—\*Effective Teaching, \*Models, Reading Achievement, \*Reading Research, \*Research Methodology, Research Needs, \*Teacher Evaluation

This paper argues that the first step in research aimed at identifying what constitutes the effective reading teacher should be the establishment of criteria which deals with effectiveness. A conceptual model is presented which could be used to identify the effective teacher. The focal point of the model is that effective reading instruction should be based on measures of students' outcome and then look for process variables which could explain the product. This approach is based on the assumption that students' end of school year reading achievement is directly affected by the reading instruction which they received during that school year. The model is then discussed in terms of three alternative assessment instruments, determining the appropriate unit of analysis, and making decisions about how to best examine these data. (TS)

**Descriptors**—Audiovisual Aids, \*Class Activities, \*Individual Reading, \*Learning Activities, Primary Education, \*Reading Interests, \*Reading Materials, Small Group Instruction, Teaching Guides

In this teaching guide 100 reading activities are suggested to provide ways for children to use their reading skills for enjoyment and to motivate independent reading. Activities are grouped into suggestions for individuals, small groups, and entire classes. Some topics for individual activities are book buttons, taped reading, a book bank, a giant book, riddles, and a personal diary. Some suggested small group activities are unison reading, story comics, puppet plays, book parades, quiet hideaways, and skill games. Some ideas for whole class activities are mood reading, ethnic book displays, multisensory reading, candid camera, a book surprise corner, and a poetry day. (MKM)

**Sounding, Blending and Psycholinguistics.**

Pub Date 75

Note—20p.; Paper presented at the Annual Meeting of the International Reading Association (20th, New York City, May 13-16, 1975)

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

**Descriptors**—\*Beginning Reading, Elementary School Students, \*Pattern Recognition, Phonemes, \*Phonics, Primary Education, \*Psycholinguistics, Reading Instruction, \*Reading Processes, Reading Research

A 40-item nonsense word list was administered to 27 first-graders who had been taught letter-sound correspondences in isolation. The results displayed a succession of stages through which subjects apparently passed. At the second stage,

subjects could sound letters but not blend the sounds into words; at the third stage, subjects could sound some letters and blend them into a word; and at the fourth stage, the subjects pronounced most of the items at sight. The fourth stage subjects were significantly more accurate at pronouncing eleven predictable items, pronounced the entire list faster, and scored significantly higher on the reading subtest of the Metropolitan Achievement Test both one and two years later when compared with the third stage subjects. Subjects' overall speed on the list as a first-grader was a significant predictor of their rank on the Metropolitan Achievement Test in second grade and in third grade. The researcher feels that written language can be mapped onto spoken language, contrary to the view of some psycholinguists. (MKM)

**Descriptors**—Doctoral Theses, \*Drama, Grade 6, Intermediate Grades, \*Literature Appreciation, \*Reading Comprehension, Reading Improvement, Reading Instruction, \*Reading Programs, Reading Research, Reading Skills, \*Teaching Methods

The purpose of this study was to develop a reading program using dramatic literature, informal dramatization, and a series of related written exercises to increase reading comprehension skills. It was also the purpose of this study to determine if such a program would produce a more favorable attitude toward reading on the part of the students in the treatment group as compared to the students in the nontreatment group. Three hundred and forty-eight students from six suburban elementary schools participated in the study. It was concluded that the use of dramatic literature, informal dramatization, and related written comprehension exercises can increase reading comprehension skills. It was also concluded that the treatment used in this study did not seem to produce a more favorable attitude toward reading than the regular basal reading program. Achievement in reading comprehension skills appears to be slightly dependent on the reading attitudes of boys and girls at the sixth-grade level. (Author/RB)

This book is based on the following assumptions: there are recognized skills of decoding that

are essential to the reading act; these skills can be identified by the knowledgeable reading teacher; there is a level of reading at which every child can best be taught; and reading comprehension is comprehension of the lexical and syntactical elements of language plus grapheme representations of that language. Over 5,000 primary and middle school children in grades 1-8 were diagnosed by 125 teachers in the three systems described. Part 1, "Diagnosis: Explanations and Interpretations," focuses on Fry's readability graph extended through preprimer level, sources of reading samples, oral reading samples, oral reading diagnostic forms, interpretation of oral reading diagnosis, and interpretation of oral reading comprehension tests. Part 2, "Oral Reading Samples with Comprehension Questions," focuses on samples from levels preprimer through grade 8. Part 3, "Diagnostic Samples for Listening Comprehension," also focuses on samples from levels preprimer through grade 8. Part 4 offers alternate reading samples with tests for oral reading and listening comprehension. Part 5 discusses planning the individualized instructional program. (TS)

Descriptors—\*Achievement Gains, \*Doctoral Theses, \*Elementary Education, \*Expectancy Tables, \*Intelligence Tests, \*Reading Achievement, \*Reading Diagnosis, \*Reading Tests

This study was concerned with the development and evaluation of a method for estimating expected gain in reading achievement for elementary school children. The method involves the development of two-year reading gain expectancy charts for pupils in grades two, three, and four. A separate chart is developed for each of the three grade levels. Each chart is devised as a nine by nine matrix of 81 cells, with the columns representing the nine stanines of the scores on the reading achievement pretest used and the rows representing the nine stanines of the IQ measure used. Predictions were calculated by computing the average amount of gain needed by pupils for their reading achievement post-test score to fall in the same stanine as their IQ. The subjects for the study were 152 elementary school pupils, of whom 53 were in second grade, 47 in third grade, and 52 in fourth grade. The method for estimating expected gain in reading achievement proposed in this study was evaluated by comparing its results with pupils' actual gains. The predictions were also compared to the results obtained by the use of three widely used reading potential formulas, and with results obtained from the use of regression and multiple regression equations. The average deviation of predicted gains from pupils' actual gains was 1.1 years. (Author/MKM)

**A Content Analysis of Reading Textbooks in Terms of Moral Value.**

Pub Date 74

Note—143p.; Ed.D. Dissertation, Columbia University

Available from—University Microfilms, P.O. Box 1764, Ann Arbor, Michigan 48106 (Order No. 75-20,181, MF\$7.50, Xerography \$15.00)

**Document Not Available from EDRS**

Descriptors—\*Basic Reading, \*Doctoral Theses, \*Elementary Education, \*Moral Development, \*Moral Values, \*Reading Instruction, \*Reading Materials, \*Textbooks, \*Values  
Identifiers—\*Kohlberg Moral Development Stages, \*Values Clarification

In this study, reading textbooks were analyzed for moral content. From the findings of this analysis the extent of the use of Lawrence Kohlberg's stages of moral development in the textbooks was determined. The greatest amount of attention in one series was given to the category of helpfulness, while little attention was given to the categories of self-reliance, changed behavior, or honesty. The frequency with which moral rele-

vant categories related to the Kohlberg stages in this reading series was found to be greatest at stage three, followed in descending order of frequency at stages six, one, two, four, and five. The following conclusions emerged. The content of reading textbooks in terms of moral value has been found through this analysis to contain some moral relevant categories. All series were not the same, however. A second conclusion is that certain themes were used over and over again. A third conclusion was that there is a need for pedagogical designing to provide adequately for content of moral value. (Author/MKM)

Descriptors—Attitude Tests, \*Changing Attitudes, \*Doctoral Theses, \*Postsecondary Education, \*Reading Achievement, \*Reading Comprehension, \*Reading Improvement, \*Reading Skills, \*Student Attitudes

The purpose of this study is to investigate the relationships between attitudes toward reading and the reading skills of a population of adults who are good readers. Two hundred adults enrolled in eight reading classes were involved in this study. Initially a reading test and a form of the Semantic Differential were administered to all subjects. The subjects then took a reading course designed to improve comprehension and speed. After the course, an alternate form of the same reading test and the same form of the Semantic Differential were administered to the subjects. The results of the study supported the hypothesis that the attitudes of adults toward reading are positively related to reading skills. The hypothesis that improvements in reading skills are positively related to improvements in attitudes had only minimal support from the data. The findings provided some support for the notion that there is a positive relationship between initial attitudes toward reading and reading skills improvement. (Author/MKM)

Prepared to guide the nonprofessional in helping another person learn to read, this book consists of systematic phonics for the remedial or beginning reader. Some of the pages in the book are addressed to the tutor and some to the learner. Introductory material includes descriptions of reading, the teacher, phonics, tools used in learning to read, reading readiness, and the method of approaching the teaching-learning task. The major portion of the book consists of sections on specific phonetic sounds, beginning with the easiest and progressing to the most difficult. A selected bibliography is included. (JM)

Identifiers—New Jersey

This second edition contains descriptions of 29 diagnostic-prescriptive reading programs (K-12) for which some success has been demonstrated in the classroom as shown by statistical evidence of significant improvement of student learning. A four-page program profile matrix provides the reader with easy identification of the salient features of individual programs. The program descriptions offer information related to program rationale, materials, classroom organization, in-service training, cost, evaluation data on student achievement, and, where possible, the location of New Jersey school districts using the program. Designed as a practical guide for teachers, this book briefly reviews and discusses various aspects of phonics. Phonics is defined, and the part phonics has played in the teaching of reading in the past is considered. The use of phonics in teaching reading at the present is examined in relation to currently available research on various approaches to reading instruction. The measurement of phonics skills is also discussed, and a nonsense word test and its advantages are considered. (LL)

Descriptors—Cognitive Processes, \*College Students, \*Educational Research, \*Higher Education, \*Learning Modalities, \*Learning Processes, \*Memory, \*Performance Factors, \*Psychological Studies, \*Recall (Psychological), \*Time Factors (Learning)

The effect of three levels of short-term memory (STM) and four learning modes (control, chunking, organizational strategy, programmed instruction, and adjunct questions) on prose learning and recall was studied. The participants in this study were educational psychology students at Towson State College in Maryland. Significant STM and learning mode effects on immediate and delayed posttests suggested two conclusions: (1) that low STM subjects are generally handicapped in comparison to high STM subjects, and (2) that prose materials used without modification may not lead to optimum performance. Substantial and significant correlations between STM and test scores on the delayed posttest suggested further research uses for the STM test. (Author/LL)

Descriptors—Business Subjects, \*Content Reading, English Instruction, Evaluation, Home Economics, Mathematics Instruction, \*Reading Comprehension, Reading Diagnosis, \*Reading Instruction, Reading Programs, Remedial Reading, Science Instruction, Secondary Education, Social Studies, \*Study Skills, \*Teacher Education, Vocabulary

This guide to teaching reading in the content areas is designed for both experienced and inexperienced teachers and emphasizes the specific teaching and learning of significant reading strategies which a student should apply to the patterns of writing used in various content areas. The book is divided into three parts, all dealing with reading as a process for learning in a given subject area. "Strategies for All Subjects" discusses evaluation procedures; readiness techniques; vocabulary strategies such as wide reading, dictionaries, and context clues; and such paragraph functions as explanation, definition, introduction, summary and conclusion, transition, narration, and description. "Specific Writing Patterns and Strategies" discusses in detail specific study skills to use with the subjects of science, social studies, mathematics, and English, and briefly covers other subjects such as business and home economics. "Parts of the Total Reading Program" discusses the utilization tasks of reaction, critical evaluation, and creative thinking, and notes special reading services available to content reading teachers. Identifiers—\*Freire (Paulo)

The topic of this review concerning international literacy is the Brazilian educator Paulo Freire and his theories and methods for teaching illiterates to read by teaching them fewer than 20 three syllable words, reflective of their social condition, such as "Shanty-town" and "wages" ("favela" and "salario" in Portuguese), whose syllables can be rearranged to form other words. Discussion of these words as depicted by a situational picture, provides the opportunity for dialog about their role in culture and the awakening of consciousness or conscientization. Articles contained in this review include an introduction by Farideh Mashayekh which contains a discussion of methodology, a list of key words used in the state of Rio, Brazil, and samples of pictorial situations; the articles by Paulo Freire first published in the "Harvard Education Review" entitled "The Adult Literacy Process as Cultural Action for Freedom"; and reaction papers by William S. Griffith, Pierre Furter, and John A. Bugbee. Another article by Freire on research methods offers suggestions for applying his ideas to Tanzania. William A. Smith offers an idea for adapting simulation games to "conscientization." A section on reviews of Freire's works and a bibliography are also included. (MKM)

Descriptors—Adult Basic Education, \*Correctional Education, \*Corrective Institutions, Functional Illiteracy, National Surveys, Prisoners, Questionnaires, \*Reading Instruction, \*Reading Tests, \*School Districts, Secondary Education

As an initial effort to assess reading in correctional institutions, a questionnaire was sent to some 70 state directors of corrections, both adult and juvenile, by the National Clearinghouse for Offender Literacy Programs which is sponsored by the American Bar Association, the American Correctional Association, and the National Association of Public Continuing and Adult Education. Seventy-four percent of the questionnaires were returned, representing 36 states plus the District of Columbia, Puerto Rico, and the U.S. Bureau of Prisons. Some of the findings are that eleven percent of those reporting stated that the institutions in their states are part of a local school district. One hundred percent of the respondents stated that they teach reading in the institutions within their states. Tests are administered by many agencies to varying numbers of inmates. Seventy-five percent of the state respondents indicated that they were interested in receiving help with their reading improvement programs. Types of assistance desired are discussed. A list of responding states and agencies is provided. (MKM)

Descriptors—\*Childrens Books, \*Composition (Literary), Disadvantaged Youth, Elementary Secondary Education, \*Language Experience Approach, Library Materials, Library Services, Reading Materials, \*Student Developed Materials, \*Writing

The reader-written book program at Rockford (Illinois) Public Library has been an extremely successful outreach program used to interest the disadvantaged child in library materials and services. Reader-written books are written by using the language experience approach techniques of having the child tell a story orally, recording that story on a tape-recorder, and having an adult transcribe and edit the story. At the library the story is typed in book form and illustrated with original drawings, magazine cut-outs, or photos. A vocabulary page, a biographical paragraph about the author, and a photo of the author are prepared. The book pages are dry-mounted together and laminated by the child, then bound with a plastic spiral binding. Next, the book is given a bookcard and pocket and is catalogued in the library, ready to be checked out as any other book would be. How-to-do-it instructions cover the topics of how to help children write books, how to plan a similar program and train helpers, and how to adapt the program to other users. Examples of stories and illustrations from the children's books are included. (MKM)

This kit for teachers is designed to help students at the elementary and secondary levels improve their reading skills. The kit is divided into twelve sections. The first section describes in detail how to best put the materials found in this aid to use. Sections two through six are devoted to the word-recognition techniques of sight word knowledge, phonetic analysis, structural analysis, context clue usage, and dictionary usage. In each section the characteristics of a word-recognition skill and directions on how to improve this skill at both the elementary and secondary school levels are given. Section seven describes how to correct weaknesses in meaning vocabulary knowledge. Sections eight through eleven deal with correcting difficulties at the various levels of comprehension. These chapters are devoted to improving skills in literal comprehension, inferential comprehension, critical reading, and creative reading. The twelfth section is devoted to correcting difficulties in the various study skills. Each chapter also contains a series of worksheets related to specific reading skills. (TS)

**Identifiers**—\*Right to Read

This book is designed primarily for principals in Right to Read programs and elsewhere, as both a theoretical description of competencies required for educational leadership and as a practical handbook for implementing leadership functions. The volume utilizes the interviews and self-analyses of 36 principals who participated in the Bank Street Right to Read Program, as first hand resources for the delineation of competencies required for enacting the leadership role in enabling adults to develop an effective reading environment in the school. The competencies identified by the principals are in the areas of staff development, leadership roles and relationships, and parent/community interaction. Each of these areas is discussed in the various chapters, in which are also listed resources and references for

CS 002 250

implementing and enacting the programmatic and administrative aspects. Six different self-rating instruments are placed in the appropriate chapters. The appendix offers a selective list of books and periodicals which are representative of the kinds of reading materials one might expect to find in the principal's bookcase. (TS)

**Identifiers**—Elementary Secondary Education Act Title III, ESEA Title III

This booklet describes a junior high school reading laboratory located in Urbana (Illinois) Junior High School, Fisher Campus. The student population in the school numbers approximately 950. Students have individual schedules, with six instructional classes of fifty minutes per day. Students enrolled in the lab attend each day for a regular fifty-minute period. The lab is an elective for all students and in all but a few cases does not supplant the regular English classes. Instruction is individualized, prescriptive, and effective. Both remedial and developmental contracts are prepared for each student. The basis for this prescription is the Stanford Diagnostic Reading Test. The mean expected increase in reading achievement as measured by this test after two semesters in the lab is one year and three months. However, nearly 50% of the students in the lab may be expected to show an increase of one year or more each semester, with gains of 3-5 years per semester for some students. These data are consistent from year to year. (TS)

Based on the premise that grouping of ideas and experiences must be understood if efficient reading is to take place, this book is directed particularly to classroom and reading teachers for grades six, seven, and eight. It attempts to indicate possible ways of isolating, identifying, using, and integrating all of the elements necessary for understanding the basic structure of ideas. Most of the chapters deal with categorizing skills, translating categories into paragraphs or the reverse, and organizing items within paragraphs or paragraphs within larger units, in an attempt to aid students in understanding the hierarchical organization of ideas used in reading and writing. The suggestions given are intended as takeoff points for developing understanding of more complex relationships. (LL)

**Descriptors**—Basic Reading, Beginning Reading, Initial Teaching Alphabet, Primary Education, \*Reading Development, \*Reading Instruction, \*Reading Processes, Reading Programs, \*Reading Research, Reading Skills, \*Teaching Methods

In discussing instructional approaches to reading, this book offers several definitions of reading and discusses teaching techniques, including early methods, the basal approach, and recent trends, among them the phonics approach, the linguistics approach, the language experience approach, the initial teaching alphabet, individualized reading, concept development, and programmed and multi-media approaches. A section on reading research considers meaning-emphasis programs, code-emphasis programs, other instructional approaches, and the problem of definitive research. Implications for the classroom teacher are briefly outlined and selected references are included. (LL)

*Nuttall, John H. And Others*  
A Bibliography for Tutors in Correctional Facilities.

Pub Date 75

Note—8p.; Unpublished study prepared at State University of New York at Albany

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

**Descriptors**—Adult Basic Education, \*Annotated Bibliographies, \*Correctional Education, Corrective Institutions, Institutionalized (Persons), Literacy, Prisoners, Program Descriptions, \*Reading Instruction, \*Reading Materials, \*Reading Programs

The purpose of this paper is to provide a useful list of reading materials for volunteers who are preparing to tutor adults in a correctional setting. Tutoring in prison is described as a special type of teaching, and it is argued that persons considering this type of tutoring should familiarize themselves with two areas indirectly related to teaching reading: the criminal justice system and the prison environment. Following the discussion on tutoring in correctional facilities is a nineteen-item annotated bibliography of books and articles related to remedial reading for institutionalized adults. (RB)

**Descriptors**—\*Behavior Patterns, \*Cognitive Processes, College Students, Higher Education, Knowledge Level, \*Learning Characteristics, \*Learning Processes, Psychological Studies, \*Teacher Education

The experiment described in this paper is concerned with prose learning. In the field of the psychology of learning, a section was arbitrarily chosen and covered by 21 passages of equal length. Six contained the essential information concerning the six keywords (elements) of the domain. The fifteen others dealt with all possible relationships between two single elements. The contents of each passage could be identified by the chapter's heading. The subjects were teacher training college students. They were instructed to read any text which they thought would yield the most information concerning the section as a whole. The same procedure was repeated twelve times, after which the learning phase was terminated and posttests were administered. In order to predict the subjects' choices, mathematical formulas were developed to demonstrate that the subjects tended to choose texts with which they were not acquainted, but about which they already had relevant knowledge. This hypothesis was verified. (RB)

**Descriptors**—\*Beginning Reading, Classroom Environment, Elementary Education, Language Usage, \*Language Variation, Reading Instruction, \*Reading Readiness, Second Language Learning, \*Teaching Methods

In order to achieve literacy, children must have mastered the decoding and encoding processes of the language of instruction. Usually this has been accomplished long before the child enters school. However, if the child's language is atypical for any reason, such as cultural or linguistic factors, then the acquisition of literacy requires a well-laid foundation which consists of a sympathetic and comfortable classroom environment and facility with the language of instruction. When this has been accomplished, the child is ready to learn to read, but should do so under conditions conducive to mastering reading skills. Through all this, it must be remembered that language variation can be used as an adjunct to learning to read rather than a hindrance. (JM)

A Comparison of the Effects of a Systematic Instructional Strategy and Basal-Reader-Oriented Instructional Strategies on Elementary Pupil Achievement of Phonic Word-Attack Skills.

Pub Date 75

Note—144p.; Ed.D. Dissertation, North Texas State University

Available from—University Microfilms, P.O. Box 1764, Ann Arbor, Michigan 48106 (Order No. 75-24,170, MF\$7.50, Xerography \$15.00)

**Document Not Available from EDRS**

**Descriptors**—\*Basic Reading, Doctoral Theses, \*Effective Teaching, Elementary Education, Instructional Improvement, \*Instructional Systems, \*Phonics, \*Reading Instruction, Reading Research, Teacher Education, Teaching Methods

The purpose of this study was to compare the effectiveness of two instructional strategies for six phonic word-attack skills objectives. The study was undertaken in order to identify training procedures for helping teachers to become more effective at reading instruction. Written criterion-referenced phonic word-attack skills pretests were administered to approximately 110 third and fourth grade pupils. On the basis of the pretest data, pupils who scored eighty percent or less were randomly assigned to groups of from four to six pupils at their grade level. These teachable groups were then randomly assigned to one of fourteen student teachers, seven of whom had been previously taught to use a basal-reader-oriented instructional strategy and seven who had been taught to use a systematic instructional strategy. This report concludes that when elementary pupil achievement of phonic word-attack skills is used as the criterion for student teacher effectiveness, then teaching in the conscientious application of systematic instructional procedures incorporating research validated learning principles is a more effective procedure than requiring student teachers to follow the recommended procedures in basal readers. **Document Not Available from EDRS**

**Descriptors**—College Students, \*Community Colleges, Diagnostic Tests, Doctoral Theses, Junior Colleges, \*Reading Achievement, Reading Comprehension, \*Reading Diagnosis, \*Reading Instruction, Reading Research, \*Reading Skills

This study sought to determine whether varying the levels of initial diagnosis was related to gains in reading achievement after a maximum period of ten weeks of instruction. The subjects were students enrolled part- or full-time at Parkland College, a public community college located in Champaign, Illinois. Students were assigned to one of three groups on the basis of scores obtained on the Iowa Silent Reading Test, Form E, with those in group one having below average reading skills and those in group three having above average reading skills. In group one, significant differences were found for the ratios of

time spent in diagnosis. In group two—those with average reading skills—significant differences were found for the levels of diagnosis. No significant differences were found between time spent in diagnosis and gains in reading achievement for students in group three. (Author/RB)

**Identifiers**—\*Advance Organizers

The purposes of this study were to analyze the effects of instructional objectives as advance organizers prior to a reading assignment, determine if an advance organizer was more effectively presented with two learning modalities than with one; predict whether vocabulary or readability variables influenced comprehension; and determine whether there was interaction between the I.Q. or pretest variables and the treatment groups in performance on the criterion variable. A selected sample of 84 students was assigned randomly to a control and two experimental groups. The findings of this study revealed that advance organizers in the form of interpretive objectives, and questions aimed at these objectives following the reading assignment, provided for significant improvement on the interpretive section of the California Reading Test. The findings also indicated that vocabulary and readability scores were significant predictors of interpretive comprehension. The findings also indicated that there was significant interaction between pretest and treatment groups. (The implications of the study are discussed and replication is suggested.) (Author/RB)

The Effect of Speed Reading and College Reading/Study Skills Instruction on Grade Point Average.

Pub Date 75

Note—120p.; Ed.D. Dissertation, University of Northern Colorado

Available from—University Microfilms, P.O. Box 1764, Ann Arbor, Michigan 48106 (Order No. 75-23,314, MF\$7.50, Xerography \$15.00)

**Document Not Available from EDRS**

**Descriptors**—College Students, Doctoral Theses, \*Grade Point Average, Higher Education, Reading Comprehension, Reading Improvement, \*Reading Instruction, \*Reading Research, \*Reading Skills, \*Speed Reading, Study Skills

The purpose of this study was to investigate changes in grade point averages for students enrolled in speed reading classes and student enrolled in study skills classes by comparing grade point average before and after instruction. Twenty-seven speed reading students were matched with twenty-seven study skills students on the basis of sex, year in school, and ACT scores. It was concluded that instruction in both college reading/study skills and speed reading appear to play a part in improving students' grade point averages; and since the speed reading students improved more than the college reading/study skills students, it is possible that learning a new mode of reading, as evidenced by the improved reading efficiency rate, was more beneficial than learning isolated study skills. In other words, an improved reading efficiency rate may tend to be internalized while practicing better study habits is not as readily internalized and requires more conscious action on the part of the student. The Development of an Instrument to Measure Literary Discrimination and Its Use with Other Tests to Judge Children's Literary Taste.

Pub Date 75  
Note—185p.; Ph.D. Dissertation, The University of Akron

Available from—University Microfilms, P.O. Box 1764, Ann Arbor, Michigan 48106 (Order No. 75-23,971, MF\$7.50, Xerography \$15.00)

Document Not Available from EDRS

Descriptors—\*Childrens Literature, Critical Reading, Doctoral Theses, Elementary Education, Intelligence Quotient, \*Literary Discrimination, \*Literature Appreciation, \*Reading Comprehension, Reading Research Identifiers—\*Literary Taste Rating Scale

The identification of the specific components of literary taste in this study was accomplished through a search of the writings about children's literature and taste, the advice of a panel of experts in the field of children's literature, and the assistance of teachers and librarians. A list of 41 components was then developed into a Literary Taste Rating Scale. This scale and four tests, including a literary response test and a reading comprehension test, were used with fifth grade boys and girls in four school districts. The results of the testing were rated statistically and the following conclusions were made: literary taste can be assessed through testing; a significant, positive correlation exists between reading comprehension and literary taste; a significant, positive correlation exists between IQ and literary taste; it appears that girls score higher than boys on tests of literary taste only when reading comprehension is involved; and it appears that teachers may be able to judge a student's literary taste as well as any test. Developments in Instruction in Selected Four Year College Reading Improvement Programs Throughout the United States, 1950-1974.

Pub Date 75

Note—244p.; Ed.D. Dissertation, The George Washington University

Available from—University Microfilms, P.O. Box 1764, Ann Arbor, Michigan 48106 (Order No. 75-25,387, MF\$7.50, Xerography \$15.00)

Document Not Available from EDRS

Descriptors—Doctoral Theses, Higher Education, \*Program Evaluation, \*Reading Improvement, \*Reading Instruction, \*Reading Programs, Reading Research, Reading Skills, Remedial Reading, Surveys, Teaching Methods

The purpose of this study was to examine the organization, program format and duration of college reading improvement instructional programs (CRIPs) in selected four-year American colleges and universities from 1950-1974, and to gather information which is vital to effective curricula and planning for higher education in the area of reading improvement. The data was obtained from responses to a questionnaire sent to 155 colleges with reading improvement programs and from visits to eight of the programs. Some of the conclusions drawn from the study were that college reading improvement programs are viable parts of the reading continuum and are essential entities for any university or college; program directors are not particularly influenced by each other in the types of materials and machines used; many of the reading improvement techniques of the 1950s and 1960s were tutorial while the 1970s showed a shift to more laboratory work; and numerous programs in reading improvement on the college level were discontinued due to lack of funds, limitations of government grants, problems of directorship caused by retirement and deaths, and the short duration of some summer workshops. A Measure of the Effectiveness of Instructional Strategies Based on Psycholinguistic Principles of Teaching Reading When Applied to a Program to Aid Seventh and Eighth Grade Underachievers.

Pub Date 75

Note—276p.; Ed.D. Dissertation, Wayne State University

Available from—University Microfilms, P.O. Box 1764, Ann Arbor, Michigan 48106 (Order No. 75-25,296, MF\$7.50, Xerography \$15.00)

Document Not Available from EDRS

Descriptors—Doctoral Theses, Junior High Schools, \*Miscue Analysis, \*Oral Reading, \*Psycholinguistics, Reading Comprehension, Reading Improvement, \*Reading Instruction, \*Reading Research, Teaching Methods

Identifiers—\*Reading Strategy Lessons

The purpose of this study was fourfold: (1) to conduct a qualitative diagnosis of the oral reading of selected middle school underachievers utilizing miscue analysis; (2) to select, design, and implement reading strategy lessons (RSL) based on psycholinguistic principles; (3) to determine to what extent the subjects were helped through the use of reading strategy lessons; and (4) to determine what are the important psycholinguistic theories applicable to the teaching of reading. The subjects, eleven blacks and eight whites, ranging in ages from eleven to fifteen and coming from similar socioeconomic levels in Detroit, were chosen at random from four concentrated reading classes designed to help underachievers in reading. Each subject orally read a story and was observed for miscues. The subjects were also tested for comprehension. After three months' exposure to RSL the subjects were retested. The findings suggest that RSL based on psycholinguistic principles and focused on the comprehension of meaning can only enhance the development of reading. (Author/LL)

Identifiers—Right to Read

Designed to provide ideas for developing and implementing a reading skills center for secondary schools, this document focuses on the needs of students who can be helped in the typical school setting and presents suggestions for helping students who have profound reading or language deficits. The contents outline in detail the many facets involved in establishing a skills center, including the goals and objectives, components of a good reading program, materials and instructional equipment (with extensive lists of texts), standardized reading tests, periodicals, an estimated cost analysis, and a variety of aids for the teacher (such as a goal setting questionnaire, list of teachers' basic books, sources of paperback books, and preparation and use of an informal reading inventory). Review, Analysis, and Synthesis of Theories and Research Base Provided by Transformational-Generative Grammar and Cognition with Implications for a Unified Theory and Partial Model of the Reading Process.

Pub Date 75

Note—173p.; Ed.D. Dissertation, The University of Tennessee

Available from—University Microfilms, P.O. Box 1764, Ann Arbor, Michigan 48106 (Order No. 75-26,700, MF\$7.50, Xerography \$15.00)

Document Not Available from EDRS

Descriptors—Doctoral Theses, \*Educational Theories, Higher Education, \*Language Development, Language Skills, Linguistic Competence, \*Models, \*Reading Processes, Reading Skills, Transformational Generative Grammar

The purpose of this study was to synthesize theories and known facts of language acquisitions provided by transformational-generative grammarians and the cognitive theories of Piaget and Vygotsky into a unified theory and to suggest a partial model of the reading process. Review and analysis of transformational-generative theory strongly indicate that the more recent development of semantic theory expanded and enriched Chomsky's (1965) syntactic theory, bringing it closer to the realm of biologically based cognitive functioning developed by Piaget. The transformational-generative linguists and cognitive theorists provided the theoretical bases for the three components of adult linguistic functioning. It was then postulated that external reading behaviors, like external language behaviors, are acquired through Piaget's processes of assimilation, accommodation, and equilibrium. With the establishment of external speech which provides the basis for the acquisition of external reading behaviors, followed by the establishment of inner speech which provides the basis for reading as a process of translation to inner speech, reading consists of transforming the syntactic structure of external speech into meaning of words and finally into the full sense and meaning of complex thought. Platek, Theresa F.

The Responses of Six Adolescents to Value Situations in Selected Short Stories: A Case Study of the Valuing Process.

Pub Date 75

Note—202p.; Ed.D. Dissertation, State University of New York at Buffalo

Available from—University Microfilms, P.O. Box 1764, Ann Arbor, Michigan 48106 (Order No. 75-27,371, MF\$7.50, Xerography \$15.00)

Document Not Available from EDRS

Descriptors—\*Bibliotherapy, Case Studies (Education), \*Critical Reading, Doctoral Theses, Educational Research, \*Literature, Moral Values, Secondary Education, \*Short Stories, \*Values

Identifiers—\*Values Clarification

The primary concern of this study was the observable aspects of the valuing process as that process becomes apparent in adolescents' expressed responses to short stories. A secondary concern was to determine to what degree the reading of fiction facilitates the valuing process and to conjecture about the benefit of value strategies for teaching literature. The case study method, incorporating analysis of the written and oral responses elicited from nine short stories and adapted versions of Sidney Simon's value-sheet and Lawrence Kohlberg's moral dilemma approach, and observations in restricted environments were employed to collect data. Six adolescents participated in the ten-week study. It was discovered that the valuing process while reading short stories can be divided into five stages: two of which are responsible for prompting and continuing the process, and three of which occur during the valuing process. This study suggests that both the value-sheet and the moral dilemma situation should be employed in the teaching of literature since both stimulate thinking about literature and involve students in valuing in unique ways. (Author/MKM)

ED 114 818 CS 002 290

Wolfe, Rosemary Fanti

An Examination of the Effects of Teaching a Reading Vocabulary upon Writing Vocabulary in Student Compositions.

Pub Date 75  
Note—231p.; Ph.D. Dissertation, University of Maryland  
Available from—University Microfilms, P.O. Box 1764, Ann Arbor, Michigan 48106 (Order No. 75-28,946, MF\$7.50, Xerography \$15.00)

Document Not Available from EDRS

Descriptors—\*Composition (Literary), Doctoral Theses, Higher Education, \*Reading Instruction, Reading Research, \*Remedial Reading Programs, \*Vocabulary, \*Vocabulary Development

The effects of two methods of teaching a reading vocabulary on writing vocabulary in student compositions were investigated: the teaching of a specific reading vocabulary with students' practice of words in sentences and the teaching of a specific reading vocabulary with students' practice of words in multiple-choice exercises. The retention of students' writing vocabulary after the vocabulary program had been completed was also examined. The subjects were 75 community college freshmen who were required to enroll in a remedial reading course. While the experimental group participated in one of the two vocabulary programs, the control group received no directed instruction in vocabulary. All students wrote three pre-treatment themes, three post-treatment themes, and three delayed themes six weeks after the program had been completed. From the results, it was concluded that the teaching of a specific reading vocabulary can have a facilitative effect on the use of different words in student compositions. In addition, the teaching of a specific reading vocabulary with practice of words in sentences can have an effect on the retention of the use of difficult words in student compositions. (Author/TS)

An Investigation into the Teaching of Critical Reading Skills at the Intermediate Level through the Current Basal Readers.

Pub Date 75

Note—134p.; Ph.D. Dissertation, Saint Louis University

Available from—University Microfilms, P.O. Box 1764, Ann Arbor, Michigan 48106 (Order No. 75-26,239, MF\$7.50, Xerography \$15.00)

Document Not Available from EDRS

Descriptors—\*Critical Reading, Doctoral Theses, Educational Objectives, Elementary Education, \*Reading Materials, Reading Research, \*Reading Skills, Textbook Content, \*Textbook Evaluation

The purposes of this study were to determine to what extent selected critical reading skills are presented in current basal readers; to determine commonalities in their presentation; to ascertain if critical skills are stated as specific objectives; and to determine if practice and evaluation materials are provided for each selected skill by the teacher's guide or workbook. Several developmental activities were undertaken including refinement of a definition of critical reading, the selection of which skills to include, and the decision as to which basal readers would be used. A model for comparative purposes was developed. Eight basal readers provided student texts, teacher's manuals and workbooks. Selection of skills was done by intermediate teachers presently teaching reading. Some of the findings were that four of the eight basal series analyzed state the skills as specific objectives; explanations and plans to use in teaching the different skills are lacking in several of the series; practice material varies greatly from series to series; all of the series seem to do an adequate job of identifying elements of style; and making judgments and inferences tend to overlap with some of the series suggesting the same practice exercises for both skills. Relationship of Reading Ability of Remedial Track University Freshmen to Text Readability and Instructional Methodology.

Pub Date 75

Note—150p.; Ph.D. Dissertation, Michigan State University

Available from—University Microfilms, P.O. Box 1764, Ann Arbor, Michigan 48106 (Order No. 75-27,249, MF\$7.50, Xerography \$15.00)

Document Not Available from EDRS

Descriptors—\*Content Reading, Doctoral Theses, Higher Education, \*Readability, \*Reading

Ability, Reading Research, \*Remedial Reading, Science Courses, Teaching Methods, \*Textbooks

The purpose of this study was to compare the reading ability of university freshmen in two remedial track courses with the readability of the assigned texts and in light of the instructional methodology employed by the instructional staff of two courses. The investigations findings seemed to suggest that the reading ability of the students in the two remedial courses ranged from grade level nine to grade level twelve. The readability level of the texts, which ranged from grade nine to graduate level, tended to be higher than the mean reading ability of the students. While the teaching staff of the two remedial courses did attempt to modify their teaching methodologies to some degree to compensate for the reading ability of the students, no modifications were made for the readability levels of the texts. None of the instructors applied readability formulas in the selection of texts, nor were they cognizant of formal concepts of readability. Informal standards for book selection were applied, such as price and adequate vocabulary load. Those students who tended to score higher on the reading tests tended to have higher final grades than the students whose reading abilities were lower. (Author/MKM)

Potential of Correctional School District Organizations. Coordination Bulletin No. 22.

American Bar Association, Washington, D.C.

Clearinghouse for Offender Literacy Programs.

Pub Date Dec 73

Note—9p.

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—Adult Basic Education, \*Adult Literacy, \*Adult Reading Programs, \*Correctional Education, Full State Funding, Functional Illiteracy, \*Prisoners, \*School Districts, State School District Relationship, Vocational Education

Identifiers—\*Correctional School Districts

An alternative to the meager budgets which complicate the correctional educator's task is proposed in this bulletin. A correctional school district organization can be developed to support viable education programs for individuals within the penal system. The six states of Texas, Connecticut, Illinois, New Jersey, Arkansas, and Ohio already have operating correctional school districts. Key aspects and elements of the special district concept are discussed. Positive aspects of the organizational concept are considered to be that priorities can be readily established and assigned to educational programs and services in correctional institutions, that legally constituted educational units have broader access to state and federal sources of funds, that funding which will permit full programming encourages long-range planning and staffing continuity, and that the status of prison of educational programs can be advanced in relation to other prison programs. A profile of the Connecticut Correctional School District indicates a trend toward more centralized operation and a 50 percent enrollment of inmates in educational and training programs. Sources of further information about correctional school districts are suggested. (MKM)

Descriptors—Beginning Reading, Directed Reading Activity, \*Elementary Education, Reading Comprehension, \*Reading Development, Reading Difficulty, \*Reading Games, \*Reading Skills, \*Remedial Instruction, Teaching Methods, Vocabulary Development

The selected activities in this bulletin are divided into three categories: games and strategies for primary grades, those for intermediate grades, and activities for the slow or reluctant learner. Among the activities and games contained in the first part are those which deal with: reading readiness; visual and auditory discrimination; con-

cept building; word attack skills; initial, final, medial vowel, and general sounds; configuration; context; and phrase, sentence, and paragraph reading. Part II suggests games and activities to foster language arts abilities; increase word preception; improve discrimination and recognition; develop vocabulary and comprehension; and further sentence understanding. The third section concentrates on improving the areas of phonics, functional skills, structural elements, blending, comprehension, fluency rate, and word recognition. (LL)

Including the Language Learning Disabled Student in the College English Class.

Pub Date 13 Mar 75

Note—18p.; Paper presented at the Annual Meeting of the Conference on College Composition and Communication (26th, St. Louis, Missouri, March 13-15, 1975)

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—\*Composition (Literary), \*Dyslexia, \*English Instruction, Higher Education, \*Learning Disabilities, Learning Processes, Low Ability Students, Reading Difficulty, Student Needs, \*Student Problems, Teaching Methods

This paper explores the characteristics and problems many language learning disabled (LLD) and dyslexic students have in college and suggests ways for college English composition teachers to help them. LLD students are often poor spellers and their handwriting looks like that of a younger child. Constant difficulty with certain grammatical transformations may also be clues of language learning disability. LLD students may have trouble with reading and may be incapable of getting meaning from certain words. Many LLD students also have problems in decoding the oral language and in communicating their own thoughts orally. Characteristics of the causes and conditions for dyslexia are discussed and three suggestions are offered for picking up clues about students who may be disabled. The teacher should first find out what LLD students need and what they have to offer and then find out how they can work with their fellow students most beneficially. Visual materials, rather than oral or written assignments, are suggested as being particularly effective for LLD students. (TS)

Identifiers—\*Country Life in America, Popular Culture

In November 1901, "Country Life in America," an illustrated monthly magazine aimed at readers interested in suburban living, was introduced to the public. Although initially intended for the rural population, it soon concentrated its appeal on city folks who had the disposable income to purchase the automobiles and other products of the technological age that were advertised in the magazine's pages. For city people who dreamed of suburban homes but were reluctant to forego the comforts of the city, "Country Life in America" offered an outlet to rural life. For those with the capital to make their dreams come true, the magazine provided a wish-book and a guide. "Country Life" ceased publication in 1942 after a profitable period as a magazine that appealed to and reflected popular culture values during the time when technology was introduced to the public on a mass basis. Identifiers—California, \*College Level Examination Program

In the late spring of 1972, the Chancellor's Office agreed to support a summer study to be undertaken by a committee of the California English Council, to investigate equivalency testing in the area of English and to recommend an appropriate program for use by the California State University and Colleges. This report is the result of that study: it attempts to focus on the major issues in such a way as to point to their solution, and it recommends a method of equivalency testing in English which is responsive to the discipline and practical to implement. The English examination administered in May of 1973 consisted of a 90-minute essay test conducted and graded by California State University and College English faculty, and the 90-minute objective CLEP Subject Examination, "Analysis and Interpretation of Literature," which was also administered at that time. The most significant results of this study were that 1,362 out of 4,071 students taking the test were identified as deserving college credit for freshman English, and the essay component has been shown to be a valuable part of freshman English equivalency testing. (The study and its results are described in both narrative and table format with newspaper clippings and news releases included.) (RB)

Descriptors—Achievement Tests, \*College Freshmen, \*Comparative Analysis, \*Composition (Literary), Educational Research, \*Equivalency Tests, Higher Education, \*Literature Appreciation, Measurement Instruments, Test Construction, Test Validity

Identifiers—California, \*College Level Examination Program

Since the 1974 California State University and Colleges Freshman English Equivalency Examination was a repeat of the 1973 examination, the report contained in this document should be viewed as a supplement to the 1973 report. The test was administered in May 1974 to 3,639 students with 1,036 receiving proficiency credit. Once again, it consisted of a 90-minute essay test constructed and graded by California State University and Colleges English faculty, and the 90-minute objective CLEP Subject Examination, "Analysis and Interpretation of Literature." The major conclusion of this supplementary report is that the English Equivalency Examination appears to be accomplishing its goal. The use of equivalency tests for general education credits deserves closer examination and raises a number of larger philosophical questions about teaching. (The results of this report are presented in both narrative and table form, and the appendixes include a statistician's report and statistical tables for the use of researchers.) (RB)

Descriptors—Doctoral Theses, Educational Improvement, \*Educational Needs, Educational Research, Effective Teaching, English Instruction, \*English Programs, \*Program Evaluation, \*School Community Relationship, Secondary Education, Student Needs

In the spring of 1973, a secondary English needs assessment was conducted in the two Flagstaff, Arizona, high schools to determine the relative importance, need, and priority of various facets of the English program as indicated by the community, and to develop a handbook for needs assessment. An opinionnaire was administered to a random, stratified sample of the community, consisting of administrators, teachers, senior students, their parents, and other members of the community-at-large. According to the majority of responses, the English programs seemed to be generally meeting the needs of the community by offering a wide selection of English classes taught by competent teachers and geared toward meeting individual differences of students. The needs assessment pointed the way toward curricular changes as well as community orientation; in addition it provided a model for a handbook. (Author/RB)

Document Not Available from EDRS

Descriptors—English Instruction, \*Grammar, Instructional Materials, \*Linguistics, Structural Linguistics, \*Transformation Generative Grammar, \*Transformations (Language), Transformation Theory (Language)

This book had two goals: to provide an introduction to transformational-generative grammar, placing it into a historical and philosophical context with other earlier linguistic traditions, and to provide a survey of the elements of English grammar from a transformational point of view. The text is intended for anyone who wishes to know the basis of transformational grammar, but it is especially intended for those who have a professional or personal need for a better acquaintance with English grammar—in particular, for prospective English teachers. Part one focuses on theories in linguistics and discusses such topics as linguistics as a science; language as innate, universal, abstract, and creative; patterns and rules; and deep structure, surface structure, and the sentence. Part two focuses on phrase structure grammar and discusses such topics as information in the lexicon; the noun phrase; the verb phrase, adverbial phrases and two-word verbs. Part three focuses on transformations and discusses such topics as sentences embedded within sentences, nominalized sentences, gerunds and infinitives, and conjoined sentences. (TS)

Descriptors—\*Business, Business Communication, College Students, Doctoral Theses, Educational Research, Ethics, Higher Education, \*Journalism, \*Publications, Social Action, \*Social Responsibility, \*Student Attitudes

Identifiers—Free Enterprise System

An historical study of the theories and attitudes pertaining to the social responsibilities of corporations in the free enterprise system was done so that these theories could be compared to operant attitudes toward the free enterprise system. Two simultaneous studies were carried out. The first one used visual representations of media opinions concerning business enterprise. The second set of opinions was derived from pre-journalism majors who served as respondents. The major findings were that the pre-journalism students saw business more as a manipulative game than as an inflexible monolithic institution, and they felt that the flaw in the business system revolved around corporate social responsibility. Although pre-journalism students fell into widely divergent groups, they did not represent extremes for or against business or business techniques, and were generally disinterested in business and the economy, except for the area of social responsibility. Their attitudes reflected traditional rather than innovative viewpoints toward the business press and toward business ethics in particular. (Author/RB)

The Development and Validation of a Scale to Measure the Attitudes of Fifth Grade Children toward Literature.

Pub Date 74

Note—114p.; Ed.D. Dissertation, The University of Florida

Available from—University Microfilms, P.O. Box 1764, Ann Arbor, Michigan 48106 (Order No. 75-19,359, Mfilm \$7.50, Xerography \$15.00)

Document Not Available from EDRS

Descriptors—Doctoral Theses, Educational Research, Grade 5, Intermediate Grades, Language Arts, \*Literature Appreciation, Measurement Instruments, \*Reading Interests, \*Student Attitudes, \*Test Construction, \*Test Validity

The purpose of this study was to develop and validate an instrument to be used to measure the attitudes of fifth grade students toward literature. A research instrument of sixty items was developed and administered to 205 fifth grade students in schools around Orlando, Florida. Based on the results of the study, the following conclusions were made: an attitude scale of the type described herein can be easily used with fifth grade children; the use of factor analysis was successful in determining specific groupings from the research instrument; the results of t-test comparisons indicated that neither teaching methods nor predetermined attitude affected factor scores; and comparison of the pretests and posttests of the formal teaching method indicated that Fact One, "Love of Reading," yielded a t-value of -2.36, the only significant difference at the .05 level. Identifiers—Elementary Secondary Education Act Title V, ESEA Title V

Intended for use by teachers of mentally gifted students, this curriculum guide contains suggestions and materials useful in programs designed to advance the learning of the mentally gifted. The guide stresses the importance of language as a tool in a technological society. Language skills are examined from a nonverbal, oral, and written perspectives in chapters on: "Goals, Concepts, and Strategies," "Objectives and Activities," and "Further Considerations." The activities in each section of the guide stress personal interaction, group interaction, and teacher-student interaction; and the final section considers ways of integrating these affective class activities into the school curriculum. (A list of selected references on affective aspects of education is appended.) (RB)

Descriptors—\*Communication (Thought Transfer), \*Course Descriptions, Course Objectives, Critical Thinking, Junior High Schools, \*Language Skills, \*Language Usage, Propaganda, \*Semantics, Teaching Methods

The main objective in this semantics unit is to sharpen the students' powers of critical thinking while increasing their sensitivity to the language. The course of study for grade 7 contains four lessons: referent and symbol, levels of abstraction, argument, and fact and opinion. The grade 8 course of study features the following lessons: similes and metaphors, hyperbole and personification, euphemism, and advertising analysis. The ninth grade course focuses on various types of propaganda from the glittering generality to the bandwagon approach. Each lesson presents objectives, lists materials needed, and describes procedures. (LL)

Document Not Available from EDRS

Descriptors—College Students, Composition (Literary), Doctoral Theses, Educational Research, Higher Education, \*Language Styles, Language Usage, \*Linguistic Patterns, \*Negro Dialects, \*Nonstandard Dialects, \*Written Language

This dissertation describes a study of the Black English Vernacular (BEV) based on 350 compositions written in the college classroom by 42 black students from working class and lower class families in a predominantly white university. The correlation between certain extralinguistic variables and over 20 linguistic variables was examined. Although there was a wide divergence in linguistic performance among the informants, it did not appear to correlate with any of the socioeconomic variables, although there was some evidence that sex was a factor in the use of certain BEV features. An important factor in determining ability to write in Standard English

as opposed to BEV appears to be the kind and degree of motivation each individual has, specifically the desire to assimilate, both culturally and economically, to the middle class. The linguistic variables with the highest percentage of occurrence included possessive "s" absence, third singular "s" absence, "a" before vowels, adverbial "s" absence, and double negatives. A further implication of this study is that a person who deletes the copula in writing is likely to use all the major BEV features studied. (Author/LL)

**Attitudinal and Behavioral Changes in Prospective Teachers Toward Black English Resulting from Training in Transformational Grammar Which Illustrates the Similarity between the Deep and Surface Structures of Black and Standard English.**

Pub Date 75

Note—327p.; Ph.D. Dissertation, Georgia State University-School of Education

Available from—University Microfilms, P.O. Box 1764, Ann Arbor, Michigan 48106 (Order No. 75-22,527, MFilm \$7.50, Xerography \$15.00)

Document Not Available from EDRS

Descriptors—\*Behavior Change, College Students, Doctoral Theses, Educational Research, English Instruction, Higher Education, \*Language Usage, Linguistic Patterns, \*Negro Dialects, Nonstandard Dialects, \*Preservice Education, \*Teacher Attitudes

The purpose of this study was to change preservice teachers' attitudes toward black English in a positive way. The students were shown that the deep structure of black English and standard English is the same; it is only the surface structures of the two dialects that exhibit variations. Pre-test data garnered from the control group and the experimental group found no statistically significant difference in their attitudes. After ten weeks of instruction, a significant difference at the .05 level was found to exist between the two groups on attitudes toward language and dialect. It was concluded that teaching a comparative study of standard and black dialect by using transformational grammar to indicate the similarities in the deep structure of the two dialects can create enough cognitive dissonance among preservice teachers that their attitudes toward language in general and dialect in particular become significantly more positive. It may also create enough change to influence behavior, though only a trend in this direction was established. (Author/RB)

Descriptors—\*Composition (Literary), \*Educational Research, Elementary Education, Lesson Plans, Linguistics, Oral Communication, \*Oral Expression, \*Teaching Methods, Writing Exercises, Writing Skills

This book contends that systematic oral and written exercises enable students to overcome many difficulties encountered in writing English. The first chapter is a general discussion of the teaching of composition today. The second section describes an experiment in oral composition drills in a seventh-grade class. The third section describes the first part of an experiment in oral exercises and composition improvement in the fourth grade. The fourth section discusses the second part of the experiment in oral exercises and composition improvement in the fourth grade. The fifth section describes an experiment in oral exercises for second graders. The sixth section is a retrospect and also discusses the prospects of the system used in these experiments. The three appendixes, which are the bulk of this book, contain an analysis of variance and the daily lessons for the fourth-grade experiment. (TS)

Descriptors—Educational Research, Elementary Secondary Education, \*English Instruction, \*Language Development, Language Skills, \*Language Usage, \*Linguistic Theory, Mass Media, \*Models, Oral Communication, Story Telling, Written Language

Identifiers—\*Spectator Role

Theoretical aspects of the spectator role in James Britton's (1970) model of language use are explored within a perspective based primarily on the work of George Kelly, Susanne Langer, Jean Piaget, Michael Polanyi, and Denys Harding. This view is amplified in a series of empirical studies based on stories told by children between the ages of two and five, and on written and oral responses to repertory grids and open-ended questionnaires by six, nine, thirteen, and seventeen year olds and from five schools. Separate samples of eleven, thirteen, and sixteen year olds were drawn for a supplementary study of various spectator-role genres and media. Developmental changes center in: (1) the relationship between spectator-role experience and the life of the individual; (2) knowledge of the conventions of

spectator-role discourse; and (3) the complexity of the experience (both personal and literary) over which a person has mastery. Spectator-role discourse emerges as a separate mode of language use at a very early age, but there is only a gradual separation of spectator-role experience from other life experiences. Not until adolescence is such discourse clearly a way to present possibilities rather than to describe reality. (Author)

Written for students and faculty advisors who are involved in producing the school yearbook, this book discusses and illustrates the contents of a well-made yearbook. The function of the yearbook is examined in chapter one, and suggestions are made for arranging the yearbook according to the basic theme. Chapter two discusses copywriting for the yearbook, and also cites common errors that the staff can easily avoid by carefully checking for factual accuracy (e.g., if the debate team was 6-2, they could not have participated in seven contests). The importance of type in producing an attractive yearbook is discussed in chapter three with illustrations of different typefaces used in headlines, captions, and text. Chapter four explains the use of photography in the yearbook, and provides suggestions for taking posed and unposed shots that are creative and informative at the same time. Chapter five provides detailed information on preparing yearbook layout. Chapter six explores the use of color, and chapter seven stresses the importance of the cover as the crowning jewel to the yearbook. (RB)

Descriptors—\*Educational Background, Effective Teaching, \*Journalism, Mass Media, Public Schools, Secondary Education, State Surveys, \*Teacher Background, Teacher Certification, \*Teacher Qualifications, \*Work Experience

Identifiers—California

Undertaken in April and May of 1974, this study utilized a two-page, 52-item questionnaire which was mailed to 300 high school journalism teachers in the state of California. The teachers were selected by random sampling and represent 78 percent of the estimated 382 who teach at schools with enrollments of 1000 or more. One hundred seventy-six questionnaires were returned and 158 (52.6 percent) were usable for tabulation purposes. The hypotheses that high school journalism teachers lack professional and academic journalistic experience and that they desire help in improving their qualifications were borne out by the results of the study. Recommendations for improving teacher preparation in California are discussed and several solutions are suggested. (RB)

This survey was conducted to determine the extent of course offerings by the accredited and the largest unaccredited journalism programs in the areas of nonverbal communications, research methods for working journalists, media economics and management, major issues in contemporary society, the urban community, and new technology. Two mailings and some telephone calls produced responses from 52 (85 percent) of the accredited and nine (90 percent) of the 10 largest unaccredited programs, giving a combined response rate of 86 percent. Three of the advocated kinds of courses were reported as offered in about two thirds of the accredited and large unaccredited journalism programs. These

courses are research methods for working journalists, media economics, and major issues in contemporary society. A course in nonverbal communications was reported as being offered at about one-third of the schools. Courses in the new technology of mass communication and the anatomy of the urban community were found to be offered by fewer than one-fifth of the schools. (The results of this survey are discussed at length, and data are presented in table format.) (RB)

This document reports the 1975 proceedings of the American Society of Newspaper Editors (ASNE) convention held in Washington, D.C., April 16-18. The contents include a list of officers and directors, past presidents of the society, and a copy of the ASNE Code of Ethics. Also contained in the document are reports on such individual sessions as "Managing Our Planet: The Crisis of Resources," "Press Coverage of the Economic Crisis: Pass or Fail?" "After 200 Years, Do We Need a New American Revolution?" and "Why Readers Hate Us—And What We Can Do about It." Addresses to the convention and question-answer sessions with President Gerald Ford, Dr. Henry Kissinger, Sheik Ahmed Zaki Yamani, and Justice Warren Burger are included in this document, as are the minutes of ASNE business meetings. The English Program in a Changing Culture: An Assessment of the Impact of the Changing Technological Culture on English Programs and Instructional Practices of Selected Secondary Schools in the Rockville Centre Diocese, Long Island, New York.

Pub Date 75

Note—280p.; Ph.D. Dissertation, Stanford University

Available from—University Microfilms, P.O. Box 1764, Ann Arbor, Michigan 48106 (Order No. 75-25,280, MF \$7.50, Xerography \$15.00)

Document Not Available from EDRS

Descriptors—\*Cultural Awareness, Cultural Factors, Doctoral Theses, Educational Research, English Instruction, \*English Programs, \*Instructional Innovation, Multimedia Instruction, Secondary Education, \*Teaching Methods, \*Technological Advancement

Identifiers—\*New York (Rockville Centre Diocese)

This study examines the use of such practices as flexible scheduling, team teaching, nongraded classes, and elective courses; provisions for individualizing learning activities; inclusion of media materials and equipment in instructional practice; and provisions for student involvement in the learning process at four secondary schools in Rockville Centre Diocese, Long Island, New York. Data was obtained from curriculum guides and course content outlines, initial interviews and follow-up meetings with department heads, questionnaires submitted to department heads and individual teachers, and observations of 2,086 minutes of classroom instruction. The findings indicated that at least three of the schools had the potential for flexible, adaptable organizational structure and practice, but no school showed startling adaptation and change as a result of the impact of the technological culture. About 44.5 percent of the instruction was teacher-dominated. Media usage was not extensive and the acceptance on paper of innovative materials and practices did not seem to be borne

out in practice. While there appeared to be some awareness of the changing technological culture, this awareness did not seem to produce much direct action and support for it. (Author/RB)

An Investigation of the Attitudes of Elementary School Administrators and Teachers of the Hawaii English Project's Language Skills Program.

Pub Date 75

Note—240p.; Ed.D. Dissertation, Wayne State University

Available from—University Microfilms, P.O. Box 1764, Ann Arbor, Michigan 48106 (Order No. 75-25,281, MF \$7.50, Xerography \$15.00)

Document Not Available from EDRS

Descriptors—\*Administrator Attitudes, Administrator Role, \*Curriculum Evaluation, Doctoral Theses, Educational Programs, \*Elementary Education, \*Language Skills, Surveys, \*Teacher Attitudes, Teacher Role

Identifiers—\*Hawaii English Projects Language Skills Program

The purposes of this study were to determine the attitudes of administrators and teachers toward the Hawaii English Project's Language Skills Program; to identify reasons for their support or non-support; and to determine whether administrators, through their experiences with the program, prefer the centralized system of curricular control or a more decentralized role in deciding instructional programs. The research data were gathered through the utilization of a survey questionnaire specifically developed for this study and administered to both teachers and administrators in the Honolulu School District who were involved in implementing the program. Several major conclusions were drawn from the data. The majority of both groups in the study was very much in favor of continuing the program; the teachers and principals overwhelmingly agreed with the program's goals, objectives, and philosophy; ninety-seven percent of the principals viewed their primary role as that of a curricular leader; nearly all the principals believed that the decision for implementing curricular programs should be left to the school; and only one-half expressed their support for expanding the program vertically through the sixth grade. Drama: What's Really Happening in the English Classroom.

Pub Date 75

Note—173p.; Ed.D. Dissertation, Boston University School of Education

Available from—University Microfilms, P.O. Box 1764, Ann Arbor, Michigan 48106 (Order No. 75-23,518, MF \$7.50, Xerography \$15.00)

Document Not Available from EDRS

Descriptors—Doctoral Theses, \*Drama, Educational Research, \*English Education, \*English Instruction, Literature, School Surveys, Secondary Education, \*Teacher Education, \*Teaching Methods

Identifiers—New England

The purposes of the study were (1) to ascertain how public high school teachers of English in New England are teaching drama and using drama activities in their classrooms; (2) to design a set of guidelines for the teaching of drama and the use of drama activities; (3) to discover how teachers of English in New England public schools are prepared in college for teaching drama and theater arts in the English classroom; (4) to discover whether those teachers who have taken courses in drama and theater arts make use of methods of teaching drama that are noticeably different from those used by teachers who have not taken such courses. A questionnaire was mailed to the chairpersons of English departments in 500 New England public high schools, chosen by random sampling. The data revealed that the kinds of courses taken by teachers have an effect upon the kinds of drama activities they use in their classrooms. Teachers who have taken performance-oriented courses or theater education courses have significantly more success than failure with drama activities of all kinds in comparison with those who have taken drama as literature courses or none of these kinds of courses at all. A Comparison of Word Attack Skills Derived from a Phonological Analysis of Frequently Used Words Drawn from a Juvenile Corpus and an Adult Corpus.

Pub Date 75

Note—294p.; Ed.D. Dissertation, Temple University

Available from—University Microfilms, P.O. Box 1764, Ann Arbor, Michigan 48106 (Order No. 75-28,278, MF\$7.50, Xerography \$15.00)

Document Not Available from EDRS

Descriptors—Consonants, \*Decoding (Reading), Doctoral Theses, \*Phoneme Grapheme Correspondence, Phonics, Reading, Reading Ability, \*Reading Difficulty, Reading Research, Spelling, Vowels, \*Word Lists, \*Word Study Skills

The main purpose of this study was to structure and compare two series of grapheme-phoneme correspondence and phonics generalizations. The first series of correspondences and generalizations is designed for seriously disabled readers in grades 3-9 and was derived through a phonemic analysis of the first 1,500 words of the Heritage list (The American Heritage Word Frequency Book). The second series of correspondences and generalizations is designed for high school and adult seriously disabled readers and was derived through a phonemic analysis of the first 1,500 words of the Computational list (Computational Analysis of Present-Day American English). Grapheme-phoneme correspondences yielded by an analysis of each list were charted. Overall, the Heritage list yields a total of 396 grapheme-phoneme correspondences. The Computational list's total correspondences number 406. These findings highlight the complexities of English spelling and the need to incorporate all productive features of regularity into a decoding program for disabled readers. (Author/LL)

Communicating in Writing: A Rhetorical Model for Developing Composition Skills.

Pub Date 75

Note—143p.; A.D. Dissertation, The University of Michigan

Available from—University Microfilms, P.O. Box 1764, Ann Arbor, Michigan 48106 (Order No. 75-29,158, MF \$5.70, Xerography \$15.00)

Document Not Available from EDRS

Descriptors—\*Communication (Thought Transfer), \*Composition (Literary), \*Composition Skills (Literary), Doctoral Theses, English Instruction, Higher Education, \*Rhetoric, \*Teaching Models, Writing Skills, Written Language

The rhetorical model for improving the basic writing skills of college students is presented from three perspectives. As a diagnostic tool, the model isolates five areas of concern for the developing communicator: surfacing tacit awareness, broadening perception, broadening the communicative repertoire, developing analytical and evaluative skills, and the application of all into appropriate verbal behavior. As a heuristic device, the model outlines several questions that the communicator can ask himself or herself. The questions are relevant in the exploration of the writing situation and in the development of the written product. As an analytical tool, the model outlines a general framework for the examination of the writing situation within each stage of the writing process: pre-writing, writing, and post-writing. In the presentation of classroom strategies which reflect this rhetorical model, writing is treated as a problem-solving activity. The focus of this model is on the fulfillment of the specific needs of a communicator in writing. (Author/RB)

English Instruction, Higher Education, \*Instructional Materials, Mass Media, \*Multimedia Instruction, \*Teaching Methods

Identifiers—\*Popular Culture

There are many ways films, paintings, and photographs can be used in teaching freshman college composition courses. These materials illustrate such rhetorical principles as unity, use of detail, comparison, point of view, and metaphor. Similarly, popular culture such as advertisements, song lyrics, comics, newspapers, and magazines can illustrate rhetorical principles, especially the problem of audience-directed writing. To show the uses of these materials, this study analyzes many examples, suggesting topics for study and discussion. The proposed course combines suggestions taken from the literature relating to visual media and popular culture, and the results of several experimental courses in freshman composition taught at Northern Michigan University during 1973-75. Students reacted with enthusiasm to the courses, particularly praising the use of films and popular culture. A large majority gained a positive attitude toward writing, literature, and art in general. Sixty-five percent of the students felt their writing skills improved considerably as a result of taking one or more of these courses, although more research needs to be done on the effectiveness of using the mass media to improve writing. An Investigation of the Effects of Creative Dramatics on Ninth Grade Students.

Pub Date 75

Note—238p.; Ph.D. Dissertation, The Florida State University

Available from—University Microfilm, P.O. Box 1764, Ann Arbor, Michigan 48106 (Order No. 75-26,811, MF\$7.50, Xerography \$15.00)

Document Not Available from EDRS

Descriptors—\*Communication (Thought Transfer), \*Creative Dramatics, Creative Thinking, Creative Writing, Doctoral Theses, Dramatics, Grade 9, Group Behavior, \*Imagination, \*Language Arts, Secondary Education, Self Esteem

The purposes of this study were to describe the use of creative dramatics within an average ninth grade arts class and to document the behavior changes in verbal and nonverbal communications, creative thinking and behavior, feeling of group closeness, self-confidence, and attitude toward the course. A teacher inexperienced in drama conducted the activities. Participant observation was the chief data collection methodology. Observations indicated positive change for most students in the areas hypothesized. Other data included an attitude survey concerning English, a questionnaire eliciting student attitudes toward drama, creative writing samples, and Torrance Tests of Creative Thinking, Verbal Forms. It was concluded that drama can aid development of imagination and communication, with benefits resulting from dramatic activities even when directed by a teacher inexperienced in drama. (Author/JM)

A Potpourri of Activities—For Use in Heterogeneously Grouped Secondary School English Classes.

New York State Education Dept., Albany. Bureau for Mentally Handicapped Children.

Pub Date 74

Note—48p.

EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage

Descriptors—Classroom Games, \*Communication Skills, \*Educational Games, \*English Instruction, Fables, \*Heterogeneous Grouping, Interpersonal Relationship, \*Learning Activities, Metaphors, Poetry, Secondary Education, Sex Role, Teaching Methods

This pamphlet includes a variety of suggestions and activities to stimulate language and thereby increase students' control over their environment and their lives. Although many of these activities can be used with elementary students, the emphasis in this collection is on language stimulation among secondary school children. The first section contains activities for teaching metaphors, fables, language, symbols, time periods, categories, the use of specific details and imagery, and story telling. The second section deals with activities for teaching surrealistic poetry, abbreviations,

and book and movie criticism. The third section contains activities to help students develop interpersonal skills. The fourth section contains interaction activities. The fifth section contains activities designed to help students recognize the ways that expectations shape their lives and to examine the derivation of their sex role expectations. (TS)

Descriptors—College Freshmen, Community Colleges, \*Composition (Literary), Doctoral Theses, \*Effective Teaching, Junior Colleges, Student Centered Curriculum, \*Teaching Methods, \*Writing Skills

The authors evaluated the overall effectiveness of two contrasting approaches to teaching freshman composition. The first was a dialect-acceptance, student-centered approach; and the second was a language standardization, teacher-centered approach. The students were evaluated by pre- and post-testing in such cognitive areas as fluency, paralinguistic correctness, and overall writing effectiveness, and in such areas as self-concept, linguistic security, attitudes about language, and interest in English classes. The results of this experiment overwhelmingly favored the dialect-acceptance, student-centered approach. Students from this class not only showed more gains in all the affective areas, but also made fewer paralinguistic errors and were judged by the raters as having made greater gains in fluency and overall writing effectiveness. Identifiers—Conference on English Education, National Council of Teachers of English

The purpose of this study was to identify major trends in the professional education of English teachers in the decade 1963-1973 as set forth in the records and publications of the National Council of Teachers of English and the Conference on English Education, and to consider their implications for future directions in English teacher education. The dominant trend observed in the general of English was steady broadening of the curriculum from the academic trivium of language, literature, and composition, to the pedagogical quadrivium of skills in listening, speaking, reading, and writing, and finally toward the humanistic concept of comprehensive communication competencies. A parallel trend was the enlargement of the English teacher's role from academic instructor to generalist communicator. The English educator's role expanded concomitantly, from methods instructor and student teaching supervisor to interdisciplinary scholar and synthesizer of a complex of resources and services for the education of the English teacher. These trends can be summarized as a movement from a predominantly academic-elitist view of the domain of English and its teacher education in 1963, to a predominantly pluralistic view in 1973. Identifiers—Hamlet, My Last Duchess, Silas Marner, Tale of Two Cities

This developmental study offers a definitive strategy for successfully teaching such representative classics as Hamlet, A Tale of Two Cities, Silas Marner, and My Last Duchess to students who are reading as much as three years below grade level but who are nevertheless normally intelligent. The study provides evidence tending to support the following conclusions, subject to the limitations of the study: (1) that many teachers show a general reluctance to teach grade-level literature to culturally different low achievers; (2) that grade-level literature—the classics or their equivalent—can be taught to low achievers without inferior substitution, if the teaching strategies are effective; (3) that many homogeneously grouped low achievers can learn college preparatory subject matter and pass standardized examinations; (4) that classical works of literature can be adapted to the understanding of low achievers who read no more than three years below grade level; (5) that the Hamlet adaptation and learning plan is an effective model in teaching grade-level literature to low achievers; (6) that, with effective teaching strategies, negative teacher attitudes and low expectations can change for the better. Document Not Available from EDRS

Descriptors—\*Composition (Literary), \*Content Analysis, Curriculum Guides, Doctoral Theses, Educational Resources, English Instruction, Higher Education, \*Instructional Materials, \*Rhetorical Criticism, Textbook Content, \*Writing Skills

Identifiers—National Council of Teachers of English

This study determines the extent to which skills of written composition, as defined by a modern rhetorical theory, appear in a selected sample of resources available to teachers. The sources judged and evaluated in the content analysis were textbooks used in preparation of English teachers, textbooks used by students in English classes, publications of the National Council of Teachers of English, curriculum guides, evaluation practices as exemplified in publications on the evaluation of written composition, professional articles, and books on writing intended for a general audience. This study presents the skills of written composition, as defined by a modern rhetorical theory, a tool for analyzing materials as related to these skills, a procedure of analysis, suggestions for material that ought to be produced, and a clear direction for curriculum decisions as they pertain to written composition. **Small Groups in the Composition Class: A Case Study of Developing Linguistic Security and Written Fluency.**

Pub Date 75

Note—252p.; A.D. Dissertation, The University of Michigan

Available from—University Microfilms, P.O. Box 1764, Ann Arbor, Michigan 48106 (Order No. 75-29,160, MF\$7.50, Xerography \$15.00)

Document Not Available from EDRS

Descriptors—Case Studies (Education), \*Composition (Literary), Composition Skills (Literary), Doctoral Theses, Educational Research, English Instruction, Higher Education, \*Linguistic Competence, \*Small Group Instruction, \*Teaching Methods, Writing Skills

Small groups provide an ideal environment for developing linguistic security (seeing one's lan-

guage as acceptable to those with whom one is most concerned about communicating). In a case study of seven students representing a cross section of two composition classes, small groups did foster linguistic security and written fluency. From remarks made in journals, from answers on evaluation forms, and from pre- and post-surveys of language attitudes, it was determined that the students showed increased valuing of their linguistic competence, and illustrated that the small group communication was instrumental in their change in attitude. By measuring the length of the students' early essays compared to later themes, real gains in fluency could be seen. By counting cohesive ties and the number of different ties used in an essay, it was evident that there was steady improvement from the early essays to the last ones. Besides feeling more linguistically secure and being able to write more fluently, the case persons had more confidence in their ability to write and speak effectively. Consequently, small groups are a beneficial means of both developing linguistic confidence and aiding the students to become better writers. (Author/RB)

**Emerging Concepts of Social-Developmental Tasks of the Young Black Adolescent in Ten Selected Black Junior Novels.**

Pub Date 74

Note—192p.; Ed.D. Dissertation, Temple University

Available from—University Microfilms, P.O. Box 1764, Ann Arbor, Michigan 48106 (Order No. 75-28,096, MF\$7.50, Xerography \$15.00)

Document Not Available from EDRS

Descriptors—\*Adolescent Literature, \*Characterization (Literature), \*Developmental Tasks, Doctoral Theses, Educational Research, English Instruction, Maturation, \*Negro Literature, Negro Role, \*Novels, Secondary Education, Social Development

It was the purpose of this study to identify and to describe black developmental tasks as treated in 10 randomly-selected black junior novels and to measure the extent to which they were present in the novels. Nineteen judges rated books appearing on the judges' list of 32 black junior novels, published during the period 1962-72. From these ratings, a sample of high-realistic and low-realistic novels was formed. Black cultural references were identified in the novels through the use of the Cultural Thematic Model, designed for the study. Findings indicated that when the Cultural Thematic Model was applied to the selected black junior novels, it was possible for concepts relating to personalities and life styles of the young black adolescent to be identified; use of the Cultural Thematic Model tended not to result in the same realistic ratings of the novels by the judges; and when the data collected from high-realistic novels were analyzed, there were greater numbers of references to achievement of individuality, the social milieu, and group-peer relationships than to relationships in the family, social values and ethnic understandings, and world view and social change. The implications of the findings are examined at length. (Author/RB)

**The Effect of Instruction in General Semantics on the Social Adjustment of Graduate Students and Senior Citizens.**

Pub Date 75

Note—104p.; Ph.D. Dissertation, University of Kentucky

Available from—University Microfilms, P.O. Box 1764, Ann Arbor, Michigan 48106 (Order No. 75-26,434, MF\$7.50, Xerography \$15.00)

Document Not Available from EDRS

Descriptors—Doctoral Theses, Educational Research, Graduate Students, Higher Education, \*Personality, \*Semantics, \*Senior Citizens, \*Social Adjustment, Social Factors, Training Objectives

Identifiers—Eysenck Personality Inventory, \*General Semantics, Is of Identity Test, Uncritical Inference Test

This study investigated the effect of training in general semantics on social adjustment. Acting on the Whorlian Hypothesis that the language structures we use influence our feeling, thinking, and behaving and therefore our social adjustment, the Is of Identity Test and Uncritical Inference Test

were used as measures of social adjustment. The subjects were graduate students (average age 30 years) and senior citizens (average age 70 years) who were Donovan Scholars and/or their spouses at the University of Kentucky. There were 60 subjects in all, 15 in each control group and each experimental group. From the experimental evidence, it was concluded that training in general semantics can improve social adjustment for both graduate students and senior citizens; graduate students will benefit more from training in general semantics than will senior citizens; and the personality factor (extroversion or introversion) will probably not have a significant influence on the effect of training in general semantics on the social adjustment as measured by the two tests. **Descriptors—**\*Adolescent Literature, Adolescents, \*Bibliotherapy, Doctoral Theses, Educational Research, Identification (Psychological), \*Literary Analysis, Literary Conventions, \*Motifs, Personal Values, Reading Materials, Secondary Education, \*Thematic Approach

**Identifiers—**\*Alienation

This study involves a discussion of the term alienation and its relevancy to adolescents, a survey of the philosophies of state departments of education, an examination of state-adopted hardback and paperback textbooks, and a look at the individual literature courses offered as electives or as parts of standard curricula in private and public secondary schools. Chief sources for the research are books by psychologists discussing the alienation of youth, correspondence from state departments of education and authorities in the fields of English and education, curriculum guides, state-adopted textbooks, and articles in professional journals and bulletins. Research reveals that psychologists and educators recognize the causes of alienation and the importance of literature in dealing with adolescents' search for values. Bibliotherapy, while not a panacea, is a method by which instructors may help students to find themselves and acquaint themselves with the great works of literature at the same time. Teachers who discuss alienation with their students via literature achieve one of education's most worthwhile goals—that of communicating with individuals grasping for insight into the world about them and the world within themselves. (Author/RB)

**Recent Practices in Teaching Writing: A Critical Examination of Junior and Senior High School Composition Textbooks.**

Pub Date 75

Note—257p.; Ph.D. Dissertation, The University of Michigan

Available from—University Microfilms, P.O. Box 1764, Ann Arbor, Michigan 48106 (Order No. 75-29,263, MF\$7.50, Xerography \$15.00)

**Document Not Available from EDRS**

**Descriptors—**\*Composition (Literary), Content Analysis, Doctoral Theses, Educational Research, \*English Instruction, \*Instructional Materials, Secondary Education, Teaching Methods, \*Textbook Bias, \*Textbook Research, Writing

A review of research and literature in the teaching of writing suggests two divergent forces operating simultaneously. First, the conservative tradition perpetuates the national mania for correctness and reverence for standard English. Second, a wide range of theoretical approaches proliferates through professional journal articles and books. To determine which textbooks and which kinds of texts are widely used, a survey of approved lists from states and from 50 large school districts was conducted. From the results, it was concluded that the traditional emphasis on correct usage and close adherence to standard English is still the predominant approach. Nevertheless, a wider range of textbooks is used

now than a decade ago. Comparing the types of books and series, it was concluded that students using any of the composition series would receive more instruction in writing than would students using the grammar- or language-oriented textbooks. Students using any of the textbooks examined would write relatively few compositions about literature. (TS)

**Document Not Available from EDRS**

**Descriptors—**\*Awards, Childrens Books, \*Childrens Literature, \*Content Analysis, Doctoral Theses, Elementary Education, \*Females, Reading Research, \*Sex Stereotypes

**Identifiers—**\*Caldecott Award

This investigation was conducted to determine the extent to which the Caldecott books stereotype the role of the human, animal and inanimate female image. The findings suggest: that in one case, when measured by a content analysis form, the rater's perception of the stereotyping of the human, animal and inanimate female characters in the texts differed from the investigator's perception of the stereotyping of the female characters in the illustration; that some readers, under certain conditions, may undergo attitude and behavior changes as a result of reading a book; and that the Caldecott winners are not free of the stereotyping of the female image. The study recommends that descriptive and experimental studies be performed to explore the difference between reading a book and viewing the illustrations, and that cross-validation procedures be employed to determine whether children's perceptions of the stereotyping of the female image in the books differs from the investigator's perceptions of the stereotyping of the female image as measured by the content analysis form. **Identifiers—**\*Speech Communication, University of Oklahoma

This document reports on the formalization of objectives, progress, and priorities of the five-year-plan of the Department of Speech Communication at the University of Oklahoma. The document presents a rationale and criteria for program planning based on the three major national conferences of the Speech Communication Association—The Wingspread Conference, the St. Charles Conference on Rhetoric, and the New Orleans Conference on Conceptual Frontiers. This document specifically addresses faculty planning, student planning, academic program planning, administration and services planning, and financial and resources planning, and presents a statement of objectives, a description of progress to date, and a list of priorities for each of those sections. The final section presents a summary of the New Orleans Conference Resolutions as they relate to research, teaching, and services, and these resolutions are discussed in terms of the priorities established in the University of Oklahoma Department of Speech Communication. **Descriptors—**\*Abstracts, \*Annotated Bibliographies, Communication Skills, Intergroup Relations, \*Literature Reviews, \*Organizational Communication

This book consists of more than 400 annotated abstracts representing the literature produced in 1974 relevant to the field of organizational communication. The objectives of this book are to provide a general structure through which students, scholars, and practitioners might obtain comprehensive information on recently published and unpublished literature in this field; to design and implement a suitable classification system for the literature of organizational communication; and to provide abstracts of literature for the year 1974. The introduction presents a rationale for the project, a review of research methods developed by the authors for the preparation of abstracts, and a statement of limitations as to both the completeness of the coverage and the classifications of the literature. The abstracts are divided into nine classifications, with each classification further divided into two subclassifications: books and dissertations; and articles, papers, and U.S. Government publications. **Proposed Standards for High School Forensics Workshops: Functional Service for Student Participants.**

Pub Date Dec 75

Note—11p.; Paper presented at the Annual Meeting of the Speech Communication Association (61st, Houston, Texas, December 27-30, 1975)

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

**Descriptors—**\*Debate, Evaluation Criteria, Persuasive Discourse, Secondary Education, Standards, Student Centered Curriculum, \*Success Factors, Summer Workshops, \*Workshops

**Identifiers—**\*Forensics Workshops

Since high school forensics workshops play an important role in the total educational forensics scene, forensics directors and administrators should examine and evaluate their schools' workshops in the light of the changes which should be made. In order to do this, a student-centered philosophical base should be established and four external and four internal factors should be considered. External factors involve the goals of the workshop, the staff, the students' financial costs, and workshop advertising and publicity. Internal factors concern the competitive nature of workshops, student research, individual instruction, and staff-student content. (JM)

**Descriptors—**\*Career Planning, Communication (Thought Transfer), Higher Education, \*Speech Curriculum, \*Work Experience, \*Work Experience Programs

It is the purpose of this paper to provide an overview of the work experience concept for speech communication students. This examination is contained in the following four sections: the student and a rationale for work experience, the professor and a rationale for work experience, the process for maintaining a work experience program, and difficulties faced in a work experience program. Students should participate in a work experience program because a student with practical experience in speech communication is in a better position to get a job; the limitations of the classroom make it hard to learn; and in such a program a student can see the relationship between speech communication and the or-

ganizational modifications of bureaucracy. Teachers will find such a program useful as it helps to explain theory in terms of practical needs for improved communication. (TS)

**Identifiers**—\*Pre Law Communication Program, Speech Communication

This paper argues that quality pre-law communication programs must be developed through an organized sustained effort in the speech communication field. The development of a pre-legal communication program is discussed in terms of three interrelated states: (1) the development of a specific academic program within the speech communication department in which students, faculty, and administrators can actually identify students as pre-law communication majors; (2) the pre-law communication program needs to be correlated with other academic subjects helpful in developing the skills and insights useful for the study of law, while also being helpful for pursuing other practical vocational interests if one does not attend law school; and (3) the pre-law communication program should be supplemented by a series of related activities sponsored or encouraged by the speech communication department. Various activities are suggested, such as guest speakers, lectures, and interviews; video tapes; and joint law school activities. The paper concludes with a description of the potential benefits of establishing such a pre-law communication program. (TS)

**Identifiers**—\*Speech Communication

This paper discusses communication education in the past, present, and future. Communication education is discussed in each time period in

terms of who the learners are, who the teachers are, what concepts are being taught or emphasized, how the concepts are taught, and in what contexts the instruction occurs. These components are also considered against the motifs of education and society, i.e., the values, beliefs, and goals that dominate the social and political institutions and inter-relate with the educational systems of the time. It is concluded that in the future, the most profound impact on society and education will be the advent of the learning society, one in which the emphasis will be on practical experience with time off for working before, during, or after schooling. It is further concluded that the profession of speech communication will probably be a prominent force in the twenty-first century. (TS)

**Alternative Theoretical Bases for the Study of Human Communication: The Systems Perspective.**

Pub Date Dec 75

Note—26p.; Paper presented at the Annual Meeting of the Speech Communication Association (61st, Houston, Texas, December 27-30, 1975)

**EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage**  
**Descriptors**—Behavior Patterns, \*Communication (Thought Transfer), Higher Education, Human Relations, \*Interpersonal Relationship, \*Role Perception, Self Concept, \*Systems Approach, \*Theories

Three potentially useful perspectives for the scientific development of human communication theory are the law model, the systems approach, and the rules paradigm. It is the purpose of this paper to indicate the utility of the systems approach. The first section of this paper provides a brief account of the systems view of the world. Outlined in the second section are the logical and empirical requirements of systems theory in four variations: open systems, closed systems, cybernetics, and structural-functionalism. A brief example of how to conceptualize a communication system from a cybernetic perspective is presented in section three. In section four, the relationship among the forms of knowledge offered by the behavioral, actional, and systems frameworks are examined. The paper concludes with a discussion of the epistemic framework to which the systems theory leads. (RB)

**Descriptors**—Behavior Patterns, \*Communication (Thought Transfer), Higher Education, Human Relations, \*Interpersonal Relationship, \*Role Perception, \*Self Concept, \*Theories

**Identifiers**—\*Rules Paradigm

Three potentially useful perspectives for the scientific development of human communication theory are the law model, the systems approach, and the rules paradigm. It is the purpose of this paper to indicate the utility of the rules perspective. For the purposes of this analysis, human communication is viewed as the successful transfer of symbolic information from one person to another. Divided into three parts, this paper examines the focus of laws, systems, and rules

perspectives to determine similarities and differences; reviews the previous development of the rules perspective and its application to the area of interpersonal communication; and outlines a rules theory of interpersonal communication consistent with the previous discussion. The investigation revealed that self-concept is an organized set of rules which direct human action through a cybernetic feedback system, and the rules paradigm of interpersonal communication is predicted upon the feedback approach. Berger, Charles R.

The Covering Law Model in Communication Inquiry.

Pub Date 75

Note—31p.; Paper presented at the Annual Meeting of the Speech Communication Association (61st, Houston, December 27-30, 1975)

EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage

Descriptors—Behavior Theories, \*Communication (Thought Transfer), Educational Research, Educational Theories, \*Models, \*Speech, \*Theories

Identifiers—Communication Theories, \*Covering Law Model

The first section of this paper defines covering law explanation as a theory which maintains that explanation may be achieved, and may be achieved, by subsuming what is to be explained under a general law. The model is examined in light of the deductive-nomological explanation, the deductive-statistical explanation, and the inductive-statistical explanation. The second section of the paper examines the feasibility of covering law models and examines some criticism of the covering law approach, including laws versus rules, cultural variation, and temporal variation. The third section of the paper examines potential barriers to theory construction and discusses irrelevant variety, irrelevant change, realism versus nominalism, insensitivity to embeddedness, and overemphasis on statistical techniques. It is concluded that a defense of the covering law approach does not deny the usefulness of the rule governed approach or the systems approach, and that the covering law approach probably does provide the most complete explanation of a phenomenon when the explanans are true. (TS)

Student Needs Assessment: Testing for Verbal Reticence.

Pub Date Nov 75

Note—17p.; Paper presented at the Annual Meeting of the Western Speech Communication Association (Seattle, Washington, November 23-26, 1975)

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—Anxiety, \*Behavior Patterns, College Students, Community Colleges, Educational Research, \*Fear, Junior Colleges, Psychological Patterns, \*Speech, Student Behavior, \*Student Needs, \*Verbal Communication

Identifiers—\*Verbal Reticence

The major objective of this study was to identify verbally reticent (V.R.) students in the community college population, beginning with first-term speech students. A total of 527 students enrolled in first-term daytime speech classes completed the V.R. Scale (Verbal Reticence Test Developed by Myron W. Lustig) during the first week of classes. Results showed that, as a group, community college students are more reluctant to engage in various kinds of verbal behavior than students enrolled in large four-year universities; that the higher students' grade point averages, the less reticent they are likely to be; that the newer a student is to the college environment, the more likely it is that verbal restraint will manifest itself; and that vocational-technical students lack the same level of self-assurance held by students intending to obtain associate or bachelor's degrees. A copy of the V.R. Scale and tables of findings are included. (JM)

Broadcast Political Advertisements and the Public Political Debate.

Pub Date Dec 75

Note—13p.; Paper presented at the Annual Meeting of the Speech Communication Association (61st, Houston, Texas, December 27-30, 1975)

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—\*Elections, \*Information Dissemination, Persuasive Discourse, Political Influences, \*Political Issues, Politics, Propaganda, \*Publicize, \*Television, Television Commercial

The method of campaigning politically on television has changed markedly between 1952, when speeches by candidates were the prevalent mode of television campaigning, and 1972, when 60-second and 30-second spot announcements had almost replaced broadcast addresses. However, studies show that spots do not constitute an important source of political information for any significant number of eligible voters, nor do spots affect voter turnout. A variety of factors suggest the desirability of prohibiting political advertising on television and radio (as in Britain) and of requiring publicly licensed broadcasters to make free time available for all major candidates to appear in an uncontrolled format. (Graphs illustrating various points are interspersed throughout the paper.) (JM)

Romano, Beatrice M.

A Communi-site-ed Approach to Basic Speech in College.

Pub Date 75

Note—17p.; Unpublished study prepared at Rockland Community College, N.Y.

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—\*Communication (Thought Transfer), Communication Skills, \*Community Problems, Higher Education, Interpersonal Relationship, \*Problem Solving, \*School Community Cooperation, School Community Relationship, \*Teaching Methods

A communi-site-ed approach to speech fundamentals attempts to teach speech communication in interpersonal situations and to alert students to the importance of retaining democratic principles in a society which is pluralistic. It is assumed that college students need and desire the kind of learning whereby theory becomes functional in their lives. This approach engages students in the problem-solving process using a problem extant in their own community. A practical solution is explored and, finally, implemented in the community. The addition of such a project to the conventional teaching routines of lecturing and speechmaking will tend to encourage motivation, enhance communication skills, and develop stronger ties between classroom and community. A further expectation is that classroom and community will become mutual agents of change. (Author)

Designed for use by students taking health courses, this guide contains instructions for preparing lectures. Anyone interested in preparing lectures who is competent in data collection, language usage, and outlining will also find this guide informative. Following the instructions provided in this guide, students will be able to perform the necessary steps in preparing a lecture: analyze the lecture situation, write an objective, write an outline, select and evaluate presentation aids, allow for possible time changes, prepare for a question-answer session, and write a summary for distribution. In addition to lecture preparation instruction, the guide also provides information on how to prepare and use presentation aids. Different types of presentation aids are illustrated and discussed in relation to various lecture situations. (RB)

Effective Presentation Techniques.

Center for Disease Control (DHEW/PHS), Atlanta, Ga.

Pub Date 75

Note—146p.; See related documents CS501168 and CS501170

EDRS Price MF-\$0.76 HC-\$6.97 Plus Postage

Descriptors—\*Audiovisual Aids, Autoinstructional Aids, \*Communication (Thought Transfer), English Instruction, \*Evaluation Methods, Health Education, Higher Education, Instructional Materials, \*Lecture, Speech, \*Teaching Guides, Teaching Methods

Intended as a companion to Lecture Preparation Guide, this booklet contains information for evaluating lectures, including guidelines and evaluation checklists. In part one, the student learns how to rate presentations on an evaluation checklist, how to record the ratings on the checklist, how to check the ratings by comparing them to the ratings agreed upon by a panel of experienced speakers, and what constitutes acceptable performance for each item on the checklist. Students then apply the acquired evaluation skills in part two by viewing a series of filmed speeches and comparing their ratings of the speeches with those arrived at by a panel. Since the main ingredient in improving presentation techniques is practice, part three suggests procedures to follow for obtaining experience and feedback. Part four suggests specific exercises to remedy and improve lecture presentation methods. An answer booklet for Effective Presentation Techniques is included so that students can evaluate their performances and the performance of others. (RB)

The information provided in this book is intended to help people in the communications fields plan their careers more carefully. While careers in medicine or law have goals and educational steps that are quite clear, communications is a field that can be found in business, in the media, in government, and in education. Following the description of communications as an occupation that cuts across all career areas, the author discusses those qualities which are necessary to succeed in communications. The steps for obtaining an education are also examined, and suggestions are included for getting some basic experience. This book contains helpful information on finding job opportunities, including lists of government documents listing career opportunities. Advice is given on how to write an inquiry letter, prepare a resume, and succeed in an interview. The appendices include information on colleges and universities offering communications curricula, and professional organizations that graduates may wish to join (RB)

In response to student inclination toward professional skill-oriented majors, the department of speech communication at Ohio University has developed an undergraduate program which offers professional undergraduate training specifically oriented to other than teaching careers. The four objectives of this program are to prepare the student to display a broad-based conceptual understanding of communication as event and as process, to demonstrate proficiency in ordinary skills, to apply effectively both theory and skills in organizational settings, and to demonstrate a conceptual understanding of at least two fields of study other than organizational communication. A typical curriculum which meets these objectives is aimed specifically for the student seeking an entry level position in corporate management. (The curriculum outline in worksheet format is included.) (JM)

**Descriptors**—Ancient History, Authors, \*Biographical Inventories, \*Classical Literature, \*Reference Books, Reference Materials, \*Rhetoric, Speech, Speech Education Identifiers—Greece, Rome

This biographical dictionary contains over 200 entries on Greek and Roman rhetoricians. The compilation omits persons who were exclusively performers or composers unless they were also theorists, critics, authors of treatises or textbooks, or teachers of speech. Bibliographical notes are attached to particular biographies rarely and only for special purposes. Generally, the standard biographical compendia and the particular sources relevant to each rhetorician have been drawn upon for the entries. Included in this dictionary are such people as Acylas, Adrian, Antipater, Ariston, Aristophanes, Aristotle, Blandus, Celsus, Chrysippus, Cicero, Cleanthes, Corvus, Crates, Dion, Epicurus, Favorinus, Glycon, Hyperides, Isocrates, Lycon, Lysias, Menecles, Philo, Plato, Sedatus, Theophrastus, and Verginius Flavius. **Descriptors**—Content Reading, Higher Education, Imagination, \*Interpretive Reading, Interpretive Skills, Literature Appreciation, Perception, \*Perceptual Development, Secondary Education, Sensory Training, Teaching Methods, \*Teaching Models

Since imaginary awareness—as the core of the oral interpreter's art—must be preceded by both an awareness of internal events and an awareness of external events, awareness training can be the most effective means of helping interpreters develop their art. Two models of the awareness development process, a hierarchy of response levels and a mind-sense-body cycle, provide instructors with useful teaching strategies. Once students have developed an alert sensory apparatus and a responsive body, they are ready to experience literature and then to interpret it orally for others. (JM)

**Descriptors**—Childrens Games, \*Communication (Thought Transfer), \*Early Childhood, Early Childhood Education, \*Imagination, \*Organization, \*Play

Identifiers—Dyadic Communication, \*Pretend Play

In this paper, the authors systemize the complex phenomenon known as pretend or make-believe play, defined as involving some transformation of the here and now in which the child is actually situated. Observations were made of three age groupings of dyads of middle class nursery school children. The activity of a pair of children, alone in a furnished room, was videotaped for approximately 15 minutes after which the composition of the dyad was changed. The authors present data on the techniques used by the children to communicate pretending and the organization of pretend episodes and their underlying plans. They also describe the types of roles employed by the children and suggest how plans, roles, and object use may interact in pretend play. Tables illustrating findings are included. (JM)

Identifiers—\*Bicentennial

This document includes introductory essays, excerpted documents, and selected bibliographies to promote a national dialogue concerning America for its Bicentennial. Bicentennial Youth Debates (BYD) is a national program developed by the Speech Communication Association and supported by a grant from the National Endowment for the Humanities. The nine issues into which this volume is divided and which constitute the BYD topics are the American Issues Forum monthly topics: A Nation of Nations, The Land of Plenty, Certain Unalienable Rights, A More Perfect Union: The American Government, Working in America, The Business of America, America in the World, Growing Up in America, and Life, Liberty and the Pursuit of Happiness. A final section on preparing for BYD events is also included. (LL)

**Descriptors**—Child Development, \*Childhood Needs, Communication (Thought Transfer), \*Discussion (Teaching Technique), Elementary Education, \*Films, \*Self Concept, \*Visual Arts Developed with the intention of helping children learn about themselves, this booklet presents the objectives, activities, and children's films used

by five public school participants in one component of the Special Arts Project. Each film was chosen both to dramatize realistically the source and effect of one specific feeling (positive or negative) common to all children and to supply the stimulus for a nonthreatening follow-up discussion. An introductory section explores the teacher's role in leading discussions, including an examination of four factors which can produce tension. The booklet then states the theme and length of viewing time along with a brief description of each film. A list of film distributors is included. (JM)

This guide contains activities developed by experienced secondary school theatre teachers to fit the goals they set up for theatre education. The purpose of this volume is to demonstrate concepts in theatre that may be used for study in the art under varying circumstances. The material is designed to be a basis for action—starting points for several kinds of theatre involvement. Each activity is accompanied by suggestions for teacher procedure and by suggestions of behavioral evidence of progress among adolescents in theatre study. Some of the activities included in this guide are improvising, discovering the

process of acting, analyzing the concept of movement in acting, organizing a play for production, and building your own theatre. The activities also provide students with an opportunity to achieve a concept of self in the theatre. (RB)

Teaching with Creative Dramatics.

Pub Date 75

Note—239p.

Available from—National Textbook Company, 8259 Niles Center Road, Skokie, Illinois 60076 (\$6.65 paper)

**Document Not Available from EDRS**

**Descriptors**—Art Activities, \*Class Activities, Communication (Thought Transfer), \*Creative Dramatics, Elementary Secondary Education, Instructional Materials, Learning Activities, \*Role Playing, \*Teaching Methods

The purpose of this text is to introduce creative dramatics to those who are concerned with the lives of children, especially parents, teachers, and those preparing to teach. Chapter one examines how children play and how they use play to meet important growth needs. In chapter two, creative dramatics is defined, and the crucial role of the teacher and the classroom environment is considered. Chapter three explores ways of developing cognitive powers, increasing communication skills, nourishing emotional growth, and stimulating imaginative thinking through sensory experiences. Chapter four elaborates on the use of movement for the communication of ideas, attitudes, and feelings. Chapter five introduces the reader to a theoretical basis for creative drama and provides a number of practical suggestions for the implementation of creative drama in the classroom. To further illustrate the application of drama for classroom learning, chapter six describes additional uses in language arts, social studies, science, and mathematics, and concludes with a sample lesson that integrates creative drama with art activities. Chapter seven stresses the importance of storytelling in creative dramatics. Several bibliographies are appended. (RB)

The Rhetorical Shot Heard 'Round the World: Legal and Extra-legal Strategies in the Boston Massacre Trials.

Pub Date 75

Note—34p.; Paper presented at the Annual Meeting of the Speech Communication Association of Pennsylvania (Harrisburg, October 25, 1975)

**EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage**

**Descriptors**—\*Colonial History (United States), \*Court Litigation, Dissent, \*Legal Responsibility, Revolutionary War (United States), \*Rhetoric, United States History, Violence  
**Identifiers**—Adams (John), \*Boston Massacre, Quincy (Josiah)

The major objectives of this paper are to explore those rhetorical strategies and tactics used by both loyalists and radicals in expressing their respective grievances following the Boston Massacre, and to assess their efficacy in so doing. The unique aspects of the colonial situation are explored, the reaction and behavior of the Bostonians are reviewed, and the legal proceedings in the matter considered, particularly as concerns John Adams' position as defense attorney and Josiah Quincy's position as prosecutor. **Identifiers**—\*Sermons

This anthology presents 43 American sermons in the context of the social, cultural, and historical development of America. Two or more sermons treat the pro and con viewpoints on nineteen specific issues—from seventeenth century Puritan debates on the authority of God, to the pre-Civil War slavery controversy, to the current questions of Popular vs. Experimental Religion and race relations. Original sermons by such homilists as John Cotton, William Jennings Bryan, Reinhold Niebuhr, and Carl McIntire are reprinted. Contemporary authorities, each associated with a college or seminary, provide an introduction to each set of sermons and the issues with which these sermons are concerned. (LL)

It is possible to remain faithful to the general intentions of management by objectives (MBO) while boiling it down to four major points. First, MBO places the emphasis on results rather than on resources or the ways in which resources are utilized. Second, responsibility for achieving these results is shared jointly by the superior and his subordinate. Third, the establishment of this responsibility and the achievement of the results are both obtained through rigorous attention to specificity. Fourth, shared responsibility and attention to specificity permit evaluation on the basis of performance, according to present standards. It appears that MBO can be a very beneficial system when employed with a good grasp of its potential and an equally good grasp of the situation in which it is to be introduced. If the purposes for which MBO is being introduced are sound, if the implementation is handled with care and patience, and if the commitment of all involved is high, there are few reasons why MBO should fail. Before a school system definitely decides that MBO is the answer, however, it should examine the problems that have been encountered with it. (Author)

**Identifiers**—\*Declining Enrollment

The first duty of the educator is to forecast enrollments as accurately as possible, using the best means available. The second is to begin planning long in advance of a school closure or major reorganization. Watchwords of successful management for the years of dwindling enrollment are communication and community participation. Communication with teachers, pupils, parents, and anyone else whose interests are affected by the changes to come is crucial to any measure of success. Moreover, the participation of all those affected is essential. It will be necessary to glean their ideas and cooperation to be certain that decisions affecting the community are acceptable to the community. Taken positively, the implications of declining enrollments are that enterprising and creative school administrators will develop better programs as they condense them. They will devise equitable reduction-in-force policies with the teachers' unions and will become even more prominent as public leaders when they unite with community task forces to solve the problems of school closings. The material in this report was developed primarily as a basis for better planning and allo-

cation of limited resources in a district experiencing a declining enrollment for the foreseeable future. The charts were developed on the basis of historical enrollment information by grade level, and forecasts were based on a standard regression formula utilizing an average of the years 1973-74 and 1974-75. The birthrate for the district is predicted on statistical information furnished by the state as well as census information and national birthrate statistics. (Author/MLF)

The material contained in this review is a continuation of studies of school size related to per-pupil-costs undertaken in the years 1971 through 1974. The comparisons made in this study have utilized 1974-75 fiscal year salary information as a direct cost factor related to school size. The study tends to confirm previous relationships between school population size and the price of operating the schools as reflected in annual per-pupil-costs. Maximum and minimum enrollment figures are given for elementary schools and junior and senior high schools. Charts and tables display the relationship between size of individual schools and related costs per student. (Author/MLF)

Identifiers—\*Instructional Programing Model

This study investigated various characteristics of the multiunit school and a seven-step Instructional Programing Model as they relate to home-school-community relations. Within this framework, the study had two objectives—to describe the characteristics of the multiunit school and Instructional Programing Model, and to analyze the interrelationships among those characteristics in terms of the allocation of economic resources, educational values, and power. Data were collected at two schools selected from eight schools participating in a home-school-community relations research project. Open-ended interviews were held with principals, unit leaders, teachers, aides, and parents to obtain substantive data regarding the operationalization of the multiunit school and the Instructional Programing Model in the two schools. Findings of the study supported two general conclusions. First, multiage grouping of students and instructional teaming were more successful than were other characteristics of the multiunit school, because they are more easily translated into tangible benefits. Second, conflict is more likely to result from differing educational values associated with the various characteristics than

from their effect on the allocation of power or resources. (Author/JG)

A few diagrams containing data for 1973 and 1974 have been added to this latest edition of the 1972 financial statistics for Canadian elementary and secondary education. Otherwise, however, the report has not undergone any major modifications. The booklet consists of two parts. The first part examines the highlights of the report, while the second part presents the actual statistical tables. Included in the report are data on total expenditures by source of funds, federal and provincial expenditures for the 1972-73 fiscal year, the finance of school boards for the 1972 calendar year, and revenue and expenditures of private schools and kindergartens for the 1972-73 school year. All financial statistics are presented by province, except in the case of private schools and kindergartens, where the Atlantic Provinces are grouped together for the purpose of confidentiality. Identifiers—Office of Education

A survey of 136 doctorate-holding administrators employed in the Washington, D.C. headquarters of the United States Office of Education sought to measure educational administrators' perceptions of their responsibilities, training and background, future orientation, and job satisfaction. Two types of analyses were used: an analysis of computerized personnel data, and an analysis of administrators' responses to an 18-item questionnaire. Questionnaire items fell into four general categories, including perceptions about job preferences, perceptions about graduate preparation and choice of academic field, perceptions about present administrative responsibilities, and perceptions about teaching, research, and choice of colleagues. A number of data tables summarize both the computerized personnel information and administrators' responses to the various questionnaire items. (Author/JG)

Matthews, Kenneth M.

Planning for Program Budgeting.

Pub Date Oct 75

Note—13p.

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—Cost Effectiveness, Decision Making, Evaluation, \*Management Systems, Objectives, \*Program Budgeting, Program Costs, \*Systems Approach

Identifiers—\*Planning Programming Budgeting System, PPBS

Program budgeting is a system that focuses on outcomes rather than on inputs, relates resources to outcomes, includes more than one time interval in the budget document, and states outcomes in measurable terms. If the assumptions underlying program budgeting are accepted, the system can be an effective tool for identifying new ways to do jobs faster, better, and less expensively. Some technical and psychological problems may have to be overcome before the potential benefits of program budgeting are realized. The major technical problems are determining the relevant costs of programs and determining the causal ef-

fects of programs. The decision to implement a program budgeting system should be a six-step process: (1) define and limit a problem to be solved or a question to be answered; (2) analyze the problem in terms of technical or psychological factors, and anticipate new problems that may emerge as a result of solving the original problem; (3) develop standards by which solutions to the problem can be evaluated; (4) collect and organize all data pertinent to the decision; (5) select a preferred solution to the problem and test it; and (6) implement the preferred solution and evaluate it. Schools' Responses to Voucher Vocational Training: Experiences with the Portland WIN Voucher Training Program.

Bureau of Social Science Research, Inc., Washington, D.C.

Spons Agency—Manpower Administration (DOL), Washington, D.C.

Report No.—BSSR-538

Pub Date Jul 75

Note—127p.

EDRS Price MF-\$0.76 HC-\$6.97 Plus Postage

Descriptors—Career Education, Educational Finance, \*Education Vouchers, Post Secondary Education, Private Schools, \*Proprietary Schools, \*Public Schools, Training Allowances, \*Vocational Education, \*Vocational Schools, Vocational Training Centers

Identifiers—WIN, \*Work Incentive Program

This report presents the results of a survey of 5 public and 22 private schools in which Work Incentive Program (WIN) registrants were enrolled for vocational training during the voucher feasibility test in Portland, Oregon. The data include the responses of school representatives to an interview schedule that asked about the schools, their operations, their reactions to the voucher program, and, additionally, what the schools said about 146 of the 168 WIN registrants who spent their training vouchers in the schools. Pervasive differences in the responses of public and private schools were found. These differences were attributed to differences in the size, organizational structure, and training philosophies of the two categories of schools. The private schools seem to be more pragmatic in their orientation toward vocational training. The voucher system posed no particular problems for the schools, and the schools so far do not seem to have behaved unethically or in an exploitive manner with respect to voucher. At the same time, it cannot be concluded that problems will not arise if vouchers become available on a larger scale and over a longer period of time. (Author/IRT)

Descriptors—\*Breakfast Programs, \*Federal Legislation, Federal Programs, \*Hunger, \*Lunch Programs, \*Nutrition

The National School Lunch Act, enacted in 1946, is the cornerstone of food delivery legislation that feeds nearly 25 million American schoolchildren each day. Since then there have been numerous new acts and amendments that have further enlarged the scope of child nutrition. These laws are compiled to provide readily available information on the current provisions of the law for the use of members of Congress and their staffs, and for citizens interested in child nutrition legislation. An Analytical Review of a School-Community Commission.

Pub Date 75

Note—27p.

EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage

**Descriptors**—\*Administrator Role, Board of Education Role, \*Citizen Participation, \*City Wide Commissions, \*Community Control, Community Organizations, Elementary Secondary Education, \*School Community Relationship, School Safety, Violence

This paper examines the functioning of the Public School Safety Commission that was established in a large west coast city to study the problem of violence in the city's public schools. The commission was established by the board of education in the spring of 1974 and issued its final report in July 1974. Over 60 community organizations, represented by more than 110 individuals, participated in early meetings of the commission, although the number of participating organizations and individuals declined as time went on. The analysis and discussion is organized into three sections. The first section analyzes the participating organizations and representatives on the commission and discusses the relative degree of community involvement versus administrative control of the commission. The second section examines the commission's recommendations and reports the final votes on each recommendation. The final section reports the author's observations of political manipulation and control of the commission by the school administration and describes how the business of the commission was actually conducted and directed. **Identifiers**—Life Cycle Costs

Based on a series of workshops, this collection of papers provides a framework for thought-emphasizing planning within time, flexibility, and maintenance constraints—as well as a practical guide for actual engineering of remodeling/renovation/conversion projects. Is remodeling always less expensive than new construction? Should high initial costs be avoided because life-cycle costing is impractical for remodeling projects? Authors address these and other cost-related subjects—real and hidden remodeling costs, cost differences between new construction and remodeling, and cost estimation in remodeling as well as discussion of inhouse versus outside contracting. Two chapters are devoted to energy

conservation considerations relevant to any construction/remodeling project. Case studies are used throughout to emphasize practical applications of ideas with special focus trained on a recent, highly successful facilities conservation project at Syracuse University. (Author/MLF)

**Descriptors**—Amish, \*Court Cases, Court Litigation, Elementary Secondary Education, \*Private Schools, \*School Attendance Legislation, \*School Law, \*Small Schools, State Standards

**Identifiers**—\*Private Home Education

This paper examines five selected court cases concerning state control over private home education. According to the author, the cases were selected on the basis of their relevancy to the subject, but no attempt was made to ascertain their representativeness. The cases discussed include State v. Peterman, Wright v. State, People v. Turner, and Meyerkorth v. State. In addition, the appendix analyzes the case of Wisconsin v. Yoder. From studying these cases, the author concludes that private home schools may operate where state regulations permit, if they employ a qualified teacher and use an educational program and schedule that conforms with acceptable educational practice. **Identifiers**—\*Roosevelt University

Roosevelt University was founded in Chicago in 1945. Since 1947 the university has occupied the Auditorium Building, which was completed in 1889 and is included in the Historic American Buildings Survey and the National Register of Historic Places. The building has been extensively remodeled and restored and an adjacent dormitory and student union constructed. In undertaking and completing this program of physical plant expansion and improvement, the university has

wrestled with and solved two difficult planning problems. The first of these problems is how a university in a landlocked urban center can create the new facilities needed for an expanding enrollment and an evolving academic program. The second major problem of significance is how to preserve an architectural landmark that several times in the 1930s and 1940s narrowly escaped demolition. This was made possible by its conversion into an academic building serving a contemporary purpose. (Author/MLF)

**Descriptors**—\*Administrator Evaluation, Elementary Secondary Education, \*Evaluation Methods, Graphs, Instructional Improvement, Management by Objectives, \*Management Systems, \*Models, Questionnaires, School Supervision, Teacher Attitudes, \*Teacher Evaluation

**Identifiers**—\*Clinical Supervision

This practicum report describes an effort to develop an effective teacher and administrator evaluation system for a small suburban school system in Connecticut. Besides meeting the requirements of a mandate from the state legislature, the system was also intended to enable the local school board to implement an incentive pay plan. A narrative evaluation form for teachers was developed, while a management by objectives system was simultaneously devised for the evaluation of administrators. It was also decided to use the clinical supervision process to improve instructional practices separately from the evaluation system. Two clinical supervision practitioners conducted numerous activities for the orientation, training, and monitoring of a randomly selected group of 30 teachers. These teachers were administered preintervention and postintervention questionnaires to indicate any changes in their attitudes toward supervision. (Author/JG)

**Competency Specification and Assessment for Instructional Leadership.**

Pub Date Oct 75

Note—8p.

Journal Cit—CCBC Notebook; v5 n1 p4-9 Oct 1975

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

**Descriptors**—Educational Assessment, Elementary Secondary Education, \*Evaluation Methods, \*Models, \*Performance Specifications, Program Descriptions, Program Development, Self Evaluation, \*Supervisor Qualifications, \*Supervisory Training

**Identifiers**—SEST, \*Special Education Supervisor Training Project

One major objective of the Special Education Supervisor Training (SEST) project was to

develop a model for competency specification that would be appropriate for both preservice and inservice preparation of any leadership personnel. This involved the two problems of specifying competencies in valid and utilitarian ways, and assessing competence. A competency specification model was developed for identifying and describing competencies as complex patterns of task-related performance. Twenty-four critical competencies within seven broad leadership task areas were specified and verified for professional supervisory personnel. A competency assessment system for providing diagnostic outcomes through heavy emphasis on the self-assessment process was also developed and is being tested. (Author/JG)

Descriptors—\*Board of Education Role, \*Boards of Education, \*Case Studies (Education), Elementary Secondary Education, \*Guidelines, \*Leadership Training, Organizational Change, Orientation, School Segregation

This booklet is intended to encourage and aid local school boards in undertaking training programs that will enable them to function more effectively. Relying heavily on case studies of school boards in Chicago and Minneapolis, the author focuses on two major problems facing school board members today—the phenomenon of increasing bureaucratization and the challenge of desegregation. Chapter 1 discusses the nature of school boards and the challenges facing them today. Chapter 2 focuses on the experiences of school board members in Chicago and Minneapolis. Chapter 3 comments on the practices of school boards in general and the Chicago and Minneapolis boards in particular. Chapter 4 presents the author's conclusions about the selection and training of school board members and offers specific suggestions for training board members to meet the demands of their position. Pub Date 76

Note—278p.

Available from—Prentice-Hall, Inc., Order Dept., Englewood Cliffs, New Jersey 07632 (\$10.95)

Document Not Available from EDRS

Descriptors—\*Conceptual Schemes, Diagrams, \*Educational Policy, Elementary Secondary Education, Federal Government, Governance, \*Government Role, Local Government, \*Models, \*Policy Formation, Political Influences, State Government

This book is intended to help readers understand the forces, processes, and conditions that interact in shaping the direction of public education and to acquaint them with several conceptual models that might assist in explaining educational policy-making. The author attempts to develop a conceptual framework that can be used to visually explain the parties, processes, and interactions in the policy process. An Eastonian model is used to examine the impact and interrelationships of local, state, and federal government in the realm of educational policy. In each section, a visual model shows the interrelationships of the various subsystems and how they affect policy formation. The models in each succeeding section relate back to earlier sections, so that readers may sense the dynamics and interrelationships of all the factors involved in educational policy-making. **Monitoring the Process and Evaluating the Results of Organization Development. Paper No. 452.**

Purdue Univ., Lafayette, Ind. Herman C. Krannert Graduate School of Industrial Administration.

Pub Date Apr 74

Note—28p.

EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage

Descriptors—Evaluation, \*Evaluation Methods, Models, \*Organizational Development, \*Organizational Effectiveness, \*Program Evaluation

Models of five alternative ways to approach the evaluation of organizational development (OD) projects are sketched: (1) ask the expert; (2) what's the target; (3) did we hit the target; (4) mid-course correction; and (5) continuous monitoring. Each model provides a different perspective on the problem of evaluation and each contains certain advantages and disadvantages. The five approaches are next put into organizational context by a survey of some major obstacles to effective evaluation studies. Persistent obstacles are found in the client, in the OD consultant, and within the OD activity itself. In the final section, two issues are addressed that must be faced in

any effort to evaluate an OD program—clarity of the role of evaluation and the audience of the evaluation. (Author)

**Evaluating Teachers. Research and Information Report.**

Queen's Univ., Kingston (Ontario).

Pub Date Jan 75

Note—35p.; Paper presented at the Annual Meeting of the Canadian Society for the Study of Education (University of Alberta, Edmonton, June 1975)

EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage

Descriptors—\*Effective Teaching, Elementary Secondary Education, \*Evaluation Methods, Formative Evaluation, Higher Education, Management by Objectives, Performance Criteria, Summative Evaluation, \*Teacher Evaluation, \*Teacher Morale, Teacher Motivation

A list of the current approaches to teacher evaluation should include the following: (1) examination of student gain scores on standardized tests, (2) analysis of typical student improvement, (3) teaching performance testing, (4) teacher skill testing, (5) administrator or peer group observations and ratings, and (6) student observations and ratings. The first three approaches tend to emphasize the product dimension of teaching, whereas the latter three focus more on the process of teaching. Most of the research activities on teacher evaluation have concentrated on the molecular level of teaching—the processes and results that occur within a classroom setting—whereas administrative concerns seem to be more at the molar level—the overall workload and attendant results. One way of performing formative evaluation at the molar level while increasing teacher morale is to incorporate elements of management by objectives. This is what has been done in the Faculty Performance Objective Form designed for the faculty of education at Queen's University. This instrument (included in an appendix) can be used in overall and specific planning; as an additional form of motivation for individual faculty; and as a source of information for promotions, tenure, and firing. **Responsive Curriculum Development. Theory and Action.**

Pub Date 75

Note—292p.

Available from—McCutchan Publishing Corporation, 2526 Grove Street, Berkeley, California 94704 (\$11.00, quantity discounts)

Document Not Available from EDRS

Descriptors—Change Strategies, Conceptual Schemes, Curriculum Design, \*Curriculum Development, \*Educational Change, Educational Theories, Elementary Secondary Education, \*Models, \*Theories

This book addresses the need for a theoretical framework that can effectively confront the

problems of responsive, responsible renewal in curriculum development and avoid the successive waves of limited approaches and polarized viewpoints that have plagued curriculum development in the past. Part I discusses various historical, social, and economic factors that influence the need for curriculum reform and examines the general problems involved in building a theoretical base for curriculum development. Part 2 presents seven propositions for a theory of responsive curriculum development and then brings them together in a matrix. A number of propositions, general constructs, and hypotheses for testing are also analyzed. The theoretical framework presented focuses primarily on elementary and secondary public school education, though it can be applied to other types and levels of education as well. (JG)

Descriptors—Change Strategies, \*Curriculum Design, \*Curriculum Development, Curriculum Planning, \*Curriculum Research, Educational Change, Essays, \*Program Descriptions

This book is a collection of 11 essays that present the experiences and views of individuals who have played major roles in large-scale curriculum development projects. The opening chapter examines conceptions of curriculum, provides an overview of the curriculum reform movement since 1950, looks at some persistent dilemmas facing the curriculum developer, and discusses considerations for curriculum developers to ponder. The next nine chapters offer insight into the varied ways in which curriculum development is and has been conducted. These chapters represent a wide range of both curriculum process and products. The final chapter synthesizes, compares, and contrasts the approaches to curriculum development described by the authors of the nine preceding chapters. (Author/JG)

*Discrimination Against Women in Educational Administration.*

Pub Date Dec 73

Note—56p.; Paper presented at the meeting of the National Association of Women Deans, Administrators, and Counselors (Chicago, Illinois, April 1974)

EDRS Price MF-\$0.76 HC-\$3.32 Plus Postage

Descriptors—\*Administrative Personnel, College Admission, Counselor Role, Elementary Secondary Education, \*Employment Practices, Employment Qualifications, \*Equal Opportunities (Jobs), \*Higher Education, Professional Associations, Recruitment, Selection, \*Sex Discrimination, Sex Stereotypes, Tenure, Working Women

This review focuses on women in educational administration as compared with men in the same field. The author recognizes sex discrimination as a historical fact and begins by discussing some of the current psychological effects of cultural conditioning. She then examines the role of the counselor dealing with high school seniors who express an interest in executive and organizational activities. Finally, she turns to the problems women have encountered in seeking admission to college, in obtaining financial aid, and, after earning one or more advanced degrees, in confronting employment conditions relating to recruitment, promotions, salary increases, and tenure. Extensive recommendations and documentation are included. (Author/IRT)

*A Survey of Opinions of Mississippi School Administrators Regarding Factors Considered Most Important in Hiring Teachers for Their First Teaching Position. Research Report Vol. 5, No. 8.*

Louisiana State Univ., Baton Rouge. Bureau of Educational Materials and Research.

Spons Agency—Louisiana Education Research Association, Baton Rouge.

Pub Date Nov 75

Note—10p.; Paper presented at the Annual Meeting of the Mid-South Educational Research Association (4th, Jackson, Mississippi, November 14, 1975)

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—Administrative Personnel, Elementary Secondary Education, Employment Practices, Employment Qualifications, \*Opinions, \*Principals, \*Superintendents, \*Teacher Education, Teacher Placement, \*Teacher Selection Identifiers—\*Mississippi

In order to determine what characteristics are most important in prompting Mississippi's major educational consumers to hire teachers, an opinionnaire was developed and sent to a stratified random sample of elementary, junior high, and senior high principals, and to superintendents. The questionnaire consisted of 11 factors to be ranked according to their priorities by the school administrators who were concerned with hiring teachers for their first teaching position. There was high agreement between the groups. Effective use of written and oral English was ranked first by three groups. Personal appearance was ranked second by superintendents and senior high principals, and third by the other principals. The principals placed slightly more confidence in the evaluation of the public school supervisor than did the superintendents, who felt that students' grade point average were more indicative of future teaching performance. This survey suggests that those seeking positions in Mississippi will not be judged first by their academic records and recommendations but rather by the way they write in initial contacts by letter, the manner in which they complete their application forms, and the impression they leave in interviews. Several suggestions for incorporating these results in teacher preparation programs are presented. (Author/IRT)

Descriptors—Educational Administration, Educational Finance, Elementary Secondary Education, \*Program Costs, Program Descriptions, Questionnaires, \*School Surveys, Statistical Data, \*Summer Programs, \*Summer Schools, \*Tables (Data)

This study is primarily a compilation of cost and budget data gathered through a summer school questionnaire that was sent to 25 United States school systems with a total enrollment of over 100,000 students. Eighteen questionnaires were returned, though one was not used since the school system does not operate a summer school. Therefore, the data analysis is based on responses from 17 of the 25 school systems contacted. The questionnaire was designed to provide guidance to the Summer School Committee in preparing

uniform summer school policy guidelines for the Department of Defense Overseas Schools. In order to develop summer school policy guidelines comparable to stateside schools, information was obtained regarding who pays the costs of providing summer school, the number of students attending summer school, the type and description of summer school courses offered, who coordinates the program and prepares required summer school reports, and other information regarding the cost and operation of summer school programs. In addition to a variety of data tables that summarize responses to the different questionnaire items, the report also contains a sample of the questionnaire form. (Author/JG)

*Guidelines for Evaluating a Superintendent (To Assist School Board Members in Planning and in Evaluation).*

California School Boards Association, Sacramento.

Pub Date Apr 75

Note—14p.

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—\*Administrator Evaluation, Board Administrator Relationship, \*Board of Education Policy, Elementary Secondary Education, \*Evaluation Criteria, Evaluation Methods, Guidelines, \*Models, \*School Superintendents, Superintendent Role

This publication is intended to aid local school board members in establishing procedures and priorities for evaluating the performance of their district superintendent. Except for a brief introductory section, the entire publication consists of a model comprehensive evaluation instrument. The evaluation model is organized in two main sections, one devoted to assessing the status of the school district and the other concerned with personal evaluation of the superintendent. Section 1 offers for consideration approximately 150 criteria dealing with the following topics: administrative organization of the school district, curriculum and instruction, responsiveness to learners' needs and aspirations, employee and pupil personnel services, personnel matters, school plant planning and management, business and financial management, community relationships, and administration of the district. Section 2 contains approximately 50 criteria concerned with superintendent-board relationships, superintendent-staff relationships, superintendent-community relationships, educational leadership, business and financial management, and personal qualities of the superintendent. *The Conventional and the Alternative in Education.*

Pub Date 75

Note—276p.

Available from—McCutchan Publishing Corporation, 2526 Grove Street, Berkeley, California 94704 (\$10.75, quantity discounts)

Document Not Available from EDRS

Descriptors—\*Alternative Schools, \*Educational Alternatives, Educational Change, \*Educational Improvement, Educational Innovation, \*Educational Philosophy, Elementary Secondary Education, Formative Evaluation, \*Futures (of Society), Humanism, Relevance (Education)

Alternatives in schools and alternatives to schools are placed within a broad social, historical, and philosophical context by six authors. The first section contains (1) a typology of educational alternatives, (2) several perspectives on educational alternatives related to a model of culture, (3) a range of conceptualizing alternatives within a comprehensive framework, (4) the relationship of the dominant humanistic movements to education, (5) the assumptions of educational evaluation, and (6) the notion of alternative education within a philosophical framework. The second section places future possibilities and prospects for attaining them within the framework developed in the preceding chapters. It contains (1) projections of the future evolving from extrapolations from the past, (2) a method for analyzing and planning alternative educational strategies, (3) incongruities between latent and overt values about schooling, (4) a measure of school success, and (5) problems encountered in the transition to a pluralistic society. Identifiers—\*New York

This study is designed to provide educators with comprehensive and accurate information concerning the salary and fringe benefits of professional personnel of the school districts in the six counties of western New York State. A number of new items of information are introduced in this year's study. First, building enrollments are given for principals' and assistant principals' positions. Five graphic presentations show the relationship between building enrollment and salary. Secondly, in response to increasing interest shown in the fringe benefit areas of negotiated contracts, the fringe benefit sections of both administrative and instructional personnel are reported in greater detail. Eighty-six percent of the school districts in western New York responded to the questionnaire. A number of the districts were still in the process of negotiations at the time the study went to press. Identifiers—\*New York

This publication presents data on attendance, staffing, revenues, and expenditures for the 87 school districts in the six counties of western New York. Data from two separate school years are included. Section A reports data from the 1972-73 fiscal year and is based mainly on state financial reports for the year. Section B reports data for 1973-74 and is drawn from state budget reports. Section C provides profile charts combining data for all of western New York, so that each school district can compare its own data profile with the means for western New York. The 1973-74 budget data are intended to indicate trends that may be helpful to individual school districts; however, caution should be exercised in using them, as they are based on budget estimates and are therefore subject to change. The data reported were obtained both from individual school districts and from the Boards of Cooperative Educational Services for Western New York. (Author/JG)

Identifiers—\*New York

This publication presents data on attendance, staffing, revenues, and expenditures for the 89 school districts in the six counties of western New York. Data from two separate school years are included. Section A reports data on actual revenues and expenditures for 1973-74 and is based on final state budget reports for the year. Section B reports data for 1974-75 and is drawn from proposed budget reports for that year. Section C provides profile charts combining data for all of western New York, so that each school district can compare its own data profile with the means for western New York. In section A data on federal aid are drawn from more accurate sources that include all revenues, not just those reported in the general fund. In section B, however, only federal revenues in the general fund are reported. In section B, data are reported according to the new classification of the revised 1974-75 state budget report. New categories of expenditures are combined and reported to show data relative to selected objects of expenditures. Also, a new category has been added to reflect expenditures for services by Boards of Cooperative Educational Services (BOCES). The data reported were obtained both from individual school districts and from the BOCES for western New York. (Author/JG)

Identifiers—\*New York

This survey is designed to provide comparative information for classified personnel in the six counties of western New York State. Data collection was more difficult than in previous years because of the increasing length of the negotiation process. This year 71 (80 percent) of the surveyed districts supplied data. This year's report is different from the 1972-73 report. Data on salaries of board of education personnel (clerk, treasurer, auditor, and the like), formerly included in the professional personnel study, now appear here. Also, additional information concerning types of health insurance plans provided by each school district is included. The data for the districts are arranged alphabetically according to county. The salaries and fringe benefits are listed according to the classifications prescribed by the state education department and the state civil service commission. Care should be exercised in comparing compensation for specific titles among districts, as assigned duties may vary from district to district. (Author)

Identifiers—\*New York

This survey is designed to provide comparative information for classified personnel in the six counties of western New York State. Data collection was more difficult this year than in previous

years because of the increasing length of the negotiation process. This year 74 of 89 districts supplied data. This study includes two features that were not in the 1973-74 report: a presentation of "other positions" and a section containing definitions of full-time employment. The latter section has been added in order to aid school districts in establishing their definitions. A table includes definitions for full-time employment by occupational groupings by district as well as a summary of minimum, maximum, and mode for each occupational grouping. The data are arranged alphabetically according to county. The salaries and fringe benefits are listed according to the classifications prescribed by the state department of education and the state civil service commission. Care should be exercised in comparing compensation for specific titles among districts, as assigned duties may vary from district to district. (Author)

To make this study more responsive to the needs of the negotiations process, many changes have been made since 1955 when the first salary study was conducted. These changes are the direct outcome of the many suggestions received from area educators. This year's study, for instance, has eliminated data on salaries of board of education personnel. It was found that these were not used in negotiations since they do not lend themselves to meaningful comparisons. A late request was made that board of cooperative educational services (BOCES) salaries be included in this study. This has been done, even though the questionnaire was not designed to include BOCES personnel. (Author)

Identifiers—\*Canada

This bibliography of 219 numbered entries is limited to Canadian works. However, section 4, "Bibliographies," will provide leads to useful information from the United States. Section 1, "Community Schools/Community Education," includes the more comprehensive works and material about particular Canadian community schools, generalized proposals for programs or changes, accounts of specific efforts in Canada to implement programs, and the utilization of educational facilities. Section 2, "Community Use of Schools," includes material primarily concerned with the use of school facilities. Section 3, "Community Control of Schools," cites the arguments for and against, discussions of successful and unsuccessful community school movements, analyses of political forces bearing on the topic, and strategies for consolidating community efforts in the direction of community control. An author index and a school index conclude the bibliography. (Author/MLF)

This publication is intended to help improve the educational planning and evaluation practices of the several hundred small- to medium-sized Wisconsin school districts that do not have a centralized planning staff. Although it was prepared specifically for school districts in Wisconsin, its content is just as useful and applicable to districts in other states. Separate sections of the booklet discuss the purposes and expectations of local educational planning, describe several possible approaches to initiating local planning, examine the value of educational needs assessment and its relationship to an overall planning program, present a functional definition of comprehensive planning and describe an educational planning model developed by the Wisconsin Section for Educational Planning, and present an analysis of the Wisconsin planning model. This planning guide is intended to provide all eligible education agencies in New York State with the information necessary to compete for federal grants under the Elementary and Secondary Education Act, Title IV, part C. Under Title IV, part C, federal funds will be granted to certain local education agencies for the development, validation, demonstration, and replication of various innovative school programs. The guide is organized in four major sections. Chapter 1 provides an overview of Title IV, part C and its role in meeting the educational needs and goals of New York State. Chapter 2 examines grant criteria and evaluation procedure under Title IV, part C. Chapter 3 discusses general application information and procedures. Chapter 4 provides detailed information on the format and procedures to be used in applying for Title IV, part C funds; a sample of the official application form for New York education agencies is included as well. Identifiers—\*Florida

This paper is one of four related publications that are intended to identify and develop a set of indicators for monitoring educational activities in Florida from the state level. The central focus of this paper is on the specification of cost-finding concepts plus identification of a few cost indicators. Various sections of the paper discuss the use of cost indicators for interstate educational comparisons, examine the use of cost indicators for comparing education with other state governmental services in Florida, consider the main issues and concerns in developing and using a costing system for education, offer suggestions for classifying and costing Florida's educational goals, and discuss some fundamental concern and problems related to a uniform costing system and to some of the financial management problems facing educational administrators. The appendix contains examples of suggested data presentation formats and data requirements for use in a statewide educational costing system. (JG)

Pub Date 75

Note—32p.

**EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage**

Descriptors—Educational Finance, \*Educational Quality, \*Educational Research, Elementary Secondary Education, Expenditures, Prediction, \*Predictor Variables, School Organization, Socioeconomic Influences, \*Socioeconomic Status, \*Student Characteristics, Teacher Characteristics

This paper summarizes studies conducted to predict various educational outputs or other measures of quality from measures of student and community input and educational processes, groups the studies by the type of output measure used, and searches for trends in the results. The data are arranged in five columns in an extensive chart. The first column gives the name of the researcher(s), the date of publication, and something of the locale or the scale of the research. Complete references are given the end of the paper. The second column gives what is usually treated as a dependent variable—some measure of output or presumed quality. The final three columns list independent variables that have been used to predict the dependent variable. They are arbitrarily divided into three groups: socioeconomic status and community, student characteristics, and variables over which the school has some immediate control—program, expenditures, teacher characteristics, finances, and the like. Much of the conventional wisdom about students, schools, and achievement is borne out by the research reported in these studies. For instance, such measures of socioeconomic status as family income, father's occupation, race, and educational attainment of parents are all highly correlated. (Author/IRT)

*Kelley, Edgar A.***Administrator Preparation Programs: Problems in Evaluating Competence.**

Pub Date Aug 75

Note—17p.; Paper presented at the National Conference of Professors of Educational Administration (Bozeman, Montana, August 17-22, 1975)

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

Descriptors—\*Administrator Education, \*Administrator Evaluation, Educational Administration, \*Educational Assessment, Educational Objectives, Educational Philosophy, \*Evaluation Criteria, Evaluation Methods, Higher Education, \*Performance Based Education, Program Planning

Judgments about competence are always relative, tentative, and situation-specific. An effective competency-based program for preparation of school administrators must base judgments about competency development on the same sources that will judge on-the-job administrative competency. The four most common instructional orientations to administrator preparation—traditional, academic, phenomenological, and performance-based—share an implicit assumption that competence can be judged by limited criteria and audiences. Regardless of philosophical orientation, the most common judge of administrator preparation is a single professor. This audience has little or no importance in judging the competence of the practitioner. Most existing programs that have been labeled performance-based education (PBE) or competency-based education (CBE) are examples of PBE. CBE may be best defined as a way of thinking about program planning. PBE is, by contrast, an instructional approach. To realize the promise of CBE demands the use of assessment criteria that involve judgments by multiple audiences. (Author/JG)

Descriptors—Administrator Education, \*Case Studies (Education), \*Course Objectives, Educational Administration, \*Educational Assessment, Educational Objectives, \*Evaluation Methods, Evaluation Needs, \*Higher Education, Self Evaluation

This paper describes the assessment procedures that were employed by students and instructors in an advanced graduate course for educational administrators. Because the course objectives were a combination of cognitive objectives, performance objectives, and affective objectives, different forms of assessment were chosen for each specific type of objective. Enabling or discrete objectives were assessed informally first through checks with peer perceptions and faculty perceptions. Experiences that were to serve as prerequisites for the achievement of later objectives were assessed through a record of participation. Terminal, complex cognitive objectives were assessed through written exercises. Objectives that resulted in written reports of research efforts were assessed by the outside agencies for which they were done. Final assessment of the growth of the total group and of individual students was accomplished through public statements of self-evaluation checked by peer perception. (Author/JG)

This book consists of seven chapters, each focusing on a different major area of school law. Each article offers a comprehensive summary and analysis of all state supreme court and federal court decisions as well as other significant court decisions relevant to one particular school law topic. The cases discussed are generally limited to those decided during 1974 and reported in the

General Digest on or before March 1, 1975, though some 1973 cases that were not treated in the 1974 yearbook are included as well. In addition, the 1975 United States Supreme Court decisions in *Wood v. Strickland* and *Goss v. Lopez* are also considered. The individual chapters include: "Governance," by K. D. Moran; "Finance," by Richard A. Rossmiller and Virginia Davis Nordin; "Property," by Phillip K. Piele and James R. Forsberg; "Tort Liability," by H.C. Hudgins, Jr.; "Pupils," by Eldon D. Wedlock, Jr.; "Employees," by J. Everette DeVaughn; and "Higher Education," by D. Parker Young. In addition to an extensive topical index, there is also a comprehensive table of cases that lists alphabetically all of the cases examined in any of the articles. Selected cases that are treated in more than one article have been cross-referenced in the first footnote of each chapter in which the case is cited. (Author/JG)

This chapter summarizes and analyzes all state supreme court and federal court decisions as well as other significant court decisions involving the rights of school pupils. The cases discussed are generally limited to those decided during 1974 and reported in the General Digest on or before March 1, 1975. Because of their unusual significance, the author also examines the 1975 United States Supreme Court decisions *Goss v. Lopez* and *Wood v. Strickland*. In his discussion, the author attempts to integrate cases and to illuminate any unifying legal principles that underlie

the decisions relevant to each specific subtopic involving school pupils. Separate sections of the article focus in turn on cases concerning mentally retarded and other exceptional children, state athletic and activity associations, tuition and school assignment, religious and conscientious beliefs of parents and students, students' substantive rights, sanctions for student misconduct, and school desegregation. Lall, Bernard M.

Educational Administration: A Cooperative Venture. Studies in Educational Administration.

Andrews Univ., Berrien Springs, Mich.

Pub Date 75

Note—12p.

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—Administrative Personnel, Administrator Attitudes, Administrator Characteristics, \*Decision Making, \*Democracy, Democratic Values, \*Educational Administration, Element-

tary Secondary Education, Organization, \*Teacher Administrator Relationship, \*Teacher Participation

Wherever democratic processes in decision-making have been tried out, administrators as well as teachers seem to agree that the advantages outweigh the weaknesses. They feel that this process ought to continue. The following are some representative values gained through teacher participation in administration. (1) Individuals grow through participation in cooperative thinking and planning, and they develop a fuller understanding of the problems both of administering and teaching. (2) Democratic administration is a means of developing excellent staff relationships. Learning to improve relationships through cooperative effort on school problems increases the chance of broader cooperation in the life of the community. (3) Democratic administration helps to achieve the release of the abilities and powers of all the staff for the benefit of the entire organization. (4) The plans developed through cooperation are likely to be superior because the judgment of many has been brought to bear on the problem. (5) Participation in general school administration should help to encourage more democratic procedures in the classroom and, to provide greater opportunity for pupils to prepare for living in a democracy. Contributions of Basic Sciences to Science of Education. Studies in Educational Administration. Andrews Univ., Berrien Springs, Mich.

Pub Date Apr 75

Note—23p.

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—Biological Sciences, Education, Logic, Natural Sciences, Physical Sciences, \*Problem Solving, \*Sciences, Scientific Attitudes, \*Scientific Concepts, \*Scientific Methodology, \*Scientific Research

The science of education has been influenced by the basic sciences to the extent that educational research now has been able to modernize its approach by accepting and using the basic scientific methodology and experimental techniques. Using primarily the same steps of scientific investigations, education today holds a place of much greater esteem than ever before. The methods of deductive and inductive reasoning are the basis of scientific inquiry, which has proved of extreme value not only to physical science, but also to the study of human behavior. There is no question that basic sciences like anthropology, biology, medical science, psychology, mathematics and statistics, and economics have helped make education truly a science. Indeed, without the knowledge of scientific methodology provided by these sciences, there would be no true research in the field of education. (Author)

A Departmental Cost-Effectiveness Model.

Pub Date [75]

Note—22p.

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—\*Cost Effectiveness, \*Departments, Educational Administration, Higher Education, \*Mathematical Models, Models, Program Costs, \*Program Effectiveness, \*Program Evaluation

In establishing a departmental cost-effectiveness model, the traditional cost-effectiveness model was discussed and equipped with a distant and deflation equation for both benefits and costs. Next, the economics of costing was examined and program costing procedures developed. Then, the model construct was described as it was structured around the 'decision-function' of the departmental administrator. Procedures were presented for its expeditious use. (Author)

Identifiers—\*Pennsylvania

This document is designed to assist school district personnel in the identification of intervention strategies that have a good probability of increasing the district's mean score on the Goal IV Educational Quality Assessment (EQA) instrument. Appropriate educational research has been reviewed and distilled into seven propositions that are applicable to the real world of basic education. In addition to these propositions, intervention techniques that may affect Goal IV (student interest in school and learning) are described. The interventions, in most cases, are widely discussed in the literature and are being used in school districts throughout the nation. An appendix contains bibliographies related to these strategies, which include continuous progress plans, team teaching, open education, learning stations, student contracting, individualized instruction, simulation and gaming, programmed instruction, and peer tutoring. The final section considers related innovative programs resulting from Elementary and Secondary Education Act Title III and describes a publication that can help identify school districts using these programs. Deciding which of the propositions and which of the intervention techniques are appropriate is left to the school district staff. (Author/IRT)

Identifiers—\*Pennsylvania

Goal IX of the Educational Quality Assessment (EQA) deals with appreciating human accomplishments. The assessment instruments concentrate on attitudes that measure the degree of value students place on areas of human accomplishment and the willingness of students to explore environments where firsthand experiences are available. The purpose of this paper is (1) to provide school districts concerned about the improvement of student attitudes as they relate to Goal IX with clues to strategies and programs that may effect change, (2) to help school districts utilize the EQA School Report as a diagnostic tool for the design and implementation of curriculum change, and (3) to provide suggested strategies and sources of literature specifically designed to focus on Goal IX. Two distinct approaches are presented. The indirect approach analyzes the condition variables that have significant correlation coefficients to Goal IX scores. The direct approach analyzes the student response patterns to the questionnaire items to determine areas or subscales that can serve as a point of focus for investigating educational research and implementing intervention strategies. The document also discusses intervention techniques and ongoing programs. An extensive bibliography and appendixes that provide a sample school report and describe available information packets are included. (Author/IRT)

Descriptors—\*Component Building Systems, Facility Guidelines, International Organizations, \*Prefabrication, \*School Construction, \*Structural Building Systems, \*Systems Approach

Identifiers—\*Industrialized Building systems  
A team of experts examined eight representative examples of industrialized building systems in six countries to determine the origins of the system and the approach taken by its originators; the reasons that led school building agencies to adopt the system; the quality and other characteristics of the finished product; system costs compared with the costs of alternative methods; construction time compared with other methods; evaluation and development techniques; and building procurement practices. The report identifies the benefits and some of the criteria of the systems, and discusses building specification and purchase, as well as the arrangements made for systems development and components production. Also considered are the many decision-making elements and the preferable ways of interrelating them, considering the variations in governmental structure in participating countries. The final chapter summarizes the conclusions of the study. (Author/MLF)

Descriptors—Bibliographies, Collective Negotiation, \*Contracts, \*Contract Salaries, \*Cost Indexes, \*Educational Finance, Elementary Secondary Education, Statistical Data, Teacher Employment, \*Teacher Salaries

Identifiers—\*Cost of Living Adjustments

This publication summarizes the history of cost-of-living (COL) adjustment clauses in salary contracts in private industry and the teaching profession, and then discusses the pros and cons of including COL clauses in teacher contracts. The merits of COL clauses are examined from the viewpoints of both employees and employers. Included are a number of statistical tables and graphs that illustrate recent trends in the consumer price index and demonstrate the impact of COL clauses on industrial wage increases. Examples of actual COL adjustment clauses from teacher contracts negotiated in 16 school districts in five different states are presented to illustrate the various types of COL clauses contained in recent teacher contracts. An extensive bibliography of relevant publications is included as well. (JG)

**The Practice of Theory.**

Pub Date Dec 75

Note—18p.

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

**Descriptors**—\*Administrator Education, \*Conceptual Schemes, \*Curriculum Design, Educational Administration, Educational Theories, Higher Education, Integrated Curriculum, \*Models, Public Administration Education, \*Theories

This paper considers arguments for and against the value of theory in administrator education programs. In his discussion, the author makes a distinction between two types of theory—"pure" and "process." "Pure" theory provides the administrator with information regarding major organizational components, and "process" theory provides background in the manner by which the major components are integrated. Based on these definitions, the author argues that theory is at the heart of the administrator education curriculum, and that the study of theory is actually very practical. The author presents a model for illustrating student progress through theory courses and a second model for integrating the skills developed from "process" theory in the "pure" theory frame of reference. It is through this process, the author suggests, that understandings obtained through the study of theory become useful in dealing with daily administrative functions. (Author/JG)

**Descriptors**—\*Administrative Policy, \*Administrator Guides, Crime, Elementary Secondary Education, Legal Problems, \*Legal Responsibility, Prevention, School Administration, \*School Law, \*Student Behavior, Student Rights, Violence

This is the latest edition of a handbook designed to assist school administrators in preventing and dealing with school disruptions and certain related legal matters. Because the handbook was prepared specifically for use by administrators in the Los Angeles Unified School District, it is based on laws and regulations that may not apply elsewhere. However, many of the administrative actions and preventative measures it recommends may be of value to school administrators in other states and cities as well. Section 1 lists various types of disruptive activity, suggests steps to minimize the impact of such disturbances, and cites the administrative and legal authority supporting such steps. Section 2 lists various preventative measures that have been successful in one or more school districts. Section 3 discusses from a legal standpoint the substance and rationale for the recommended responses to various disturbances. Section 4 presents the text of the laws, regulations, and policies cited throughout the handbook. Section 5 provides useful information about relevant legal requirements and administrative procedures. Section 6 contains a glossary of terms, abbreviations, and references used throughout the handbook. (JG)

**Descriptors**—\*Educational History, Elementary Secondary Education, \*Historiography, Interviews, Public School Systems, \*School Superintendents, State Government, \*State Officials, \*Superintendent Role, United States History  
**Identifiers**—\*Arizona, Superintendents of Public Instruction

This book is a study of the historical development of public education in the Territory and State of Arizona, as reflected and influenced by the office of Superintendent of Public Instruction. The book is organized in 20 chronologically ordered chapters, mainly centered around various individuals who had some significant impact on the course of public education in Arizona. In the first six chapters, much attention is devoted to the activities of the various territorial governors and legislative assemblies as they affected education between 1854 and 1883. Chapters 7 through 20 mainly focus on one or more of the 24 superintendents of public instruction between 1883 and 1975. The author relies entirely on the historical narrative technique in discussing the history of the superintendency until 1958, but he mainly uses oral history interviews to portray the period from 1958 to 1975. Material for the study was gleaned from a variety of libraries and archives in Arizona and from personal interviews with living ex-superintendents and their associates. (JG)

This booklet presents descriptive and background information on major federal education legislation in an attempt to help educators and other concerned citizens effectively influence future changes in such legislation. Descriptions of legislation are first arranged by year of expiration, starting with bills that can be extended from fiscal year 1975 to the next session and including legislative programs due to expire in 1976, 1977, and 1978, as well as those with no scheduled renewal. Within each listing by expiration year, descriptions of individual laws are organized into separate categories for elementary-secondary legislation, postsecondary legislation, legislation related to the organization of the Education Division of the Department of Health, Education, and Welfare, and miscellaneous education legislation. **Descriptors**—\*Curriculum Research, Educational Trends, High School Curriculum, National Surveys, Questionnaires, \*School Statistics, \*School Surveys, \*Secondary Education, Student Distribution, \*Student Enrollment, Tables (Data)

This report summarizes data obtained for the National Center for Education Statistics (NCES) in a survey of the courses taught in public secondary schools of the 50 states and the District of Columbia during the 1972-73 school year. Questionnaires were mailed to a sample of 8,489 schools throughout the nation offering course work in any or all of grades 7-12; the schools selected were generally representative by size, type, and location of schools within each state. In addition to examining course organization and curricular practices, the main thrust of the survey was to elicit the titles and number of courses

being offered by secondary schools and to determine the number of pupils who availed themselves of these offerings. The main purpose of the report is to provide up-to-date information to the respondent schools and state education agencies, although the historical comparability of the data was also considered. Appendix A provides technical information on how the data were collected and analyzed, and Appendix B contains a reproduction of the 18-page questionnaire that was completed by the respondent schools. ESEA Interagency Policy-Making as "Realistic Opportunism": A Case Study of a National Laboratory's Curriculum Diffusion Project.

Pub Date Apr 74

Note—26p.; Paper presented at the Annual Meeting of the American Educational Research Association (Chicago, Illinois, April 1974)

EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage

Descriptors—\*Case Studies (Education), \*Curriculum Development, \*Diffusion, Educational Innovation, Educational Policy, Elementary Secondary Education, \*Federal Programs, Interagency Coordination, \*Policy Formation, Research and Development Centers

Identifiers—\*Elementary Secondary Education Act, ESEA

This study is a political analysis of federal interagency policy processes in a diffusion project involving a national educational laboratory, a state department of education, and nine local districts. Data were collected through ethnohistorical procedures over one and one-half years for summative evaluation reports of the project and the curriculum. Diffusion was a discrepancy area, and lab autonomy occurred. State and local implementation of a curriculum developed by the federal agency led to dissension within the project. Project renewal negotiations, following unanticipated events, were for further exchange of services among federal, state, and local agencies operating on scarce resources. This study demonstrates successful federal policy strategies, which are presented as prescriptions and characterized as "realistic opportunism." (Author)

Backcasting from Graduation Targets to Required Enrollments Using the Generalized Inverse of the Transformation Matrix. Program in International Education Finance.

California Univ., Berkeley. School of Education.

Spons Agency—Agency for International Development (Dept. of State), Washington, D.C.

Pub Date 28 Apr 75

Note—23p.

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—Educational Planning, \*Enrollment Projections, \*Graduates, Manpower Needs, \*Mathematical Models, \*Prediction

The general solution to the problem of calculating school enrollments at time (t-1) necessary to meet predetermined graduation or manpower targets at time (t) is derived and examined. The solution, which is obtained by minimizing the squared discrepancy between the given graduations and those predicted by the enrollments, requires the unique generalized inverse of the transformation matrix that maps enrollments into graduations. Information on the rank and order of this matrix is used to evaluate the indeterminacy and approximateness of the solution. (Author)

Descriptors—\*Academic Achievement, Compensatory Education, Educational Assessment, Educationally Disadvantaged, Elementary Secondary Education, \*Experimental Programs, \*Federal Programs, Incentive Systems, \*Performance Contracts, Program Evaluation, \*Research Design, Research Methodology

Identifiers—OEO, Office of Economic Opportunity

This book examines in detail the experiment in educational performance contracting conducted by the United States Office of Economic Opportunity (OEO) during the 1970-71 school year. Major objectives of the OEO project were to find out whether a private educational firm could teach educationally disadvantaged children to read and write better than local public schools could, and to find out how successfully the pecuniary incentive system operates in education. The official finding of the study was that private companies did not seem to teach better than the public schools did, but there has been much controversy over possible methodological and design defects in the experiment. The authors examine each of these arguments as they describe the design and operation of the experiment, in an effort to evaluate the significance of the various criticisms and to suggest how future experiments might avoid similar difficulties. Identifiers—Follow Through Program, Head Start Planned Variation Program, \*Planned Variation Programs

This book consists of nine articles prepared for a 1973 conference that considered the lessons of two federally funded compensatory education projects of the late 1960s, the Follow Through program and the Head Start Planned Variation program. Both were planned variation programs, under which local communities were invited to design, implement, and evaluate various approaches to improving early childhood education for poor children. Through systematic evaluation

of alternative techniques, it was hoped that the planned variation approach would lead to substantial improvement of early childhood education. In the first chapter, the editors explain the planned variation technique and summarize the main conclusions of the conference. The next three chapters discuss the Follow Through program, followed by three chapters dealing with the Head Start Planned Variation program. The last two chapters draw on the experience with both programs and attempt to draw lessons for the future. (Author/JG)

Declining Elementary and Secondary Enrollments in Illinois: An Overview of the Implications.

Illinois State Office of Education, Springfield.

Statistics Section.

Pub Date Feb 75

Note—49p.

EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage

Descriptors—Educational Facilities, Educational Finance, \*Educational Planning, Educational Policy, \*Educational Trends, Elementary Secondary Education, \*Enrollment Projections, \*Enrollment Trends, Higher Education, School Statistics, Student Enrollment, \*Tables (Data), Teacher Supply and Demand

Identifiers—\*Illinois

This paper is intended to stimulate research into the policy consequences of declining school enrollment and to provoke discussion of possible policy alternatives. The paper is organized in three sections. The first section presents a summary of public school enrollment projections for Illinois, based on a 1974 study by the State Department of Research and Statistics. The second section attempts to make current trends more meaningful to individual school districts by more closely examining enrollment trends on both a statewide and county-by-county basis. The third and largest section examines probable consequences of the projected enrollment decline from a macro point of view. In this final section, the discussion focuses primarily on the issues of facility use, school district revenues and expenditures, demand for teachers, and higher education, emphasizing their relationship to each other and to future educational program alternatives. Descriptors—\*Board of Education Policy, Civil Liberties, \*Educational Administration, Educational Change, Educational Sociology, Elementary Secondary Education, Essays, Models, \*School Law, Social Psychology, \*Student Rights, \*Student School Relationship

This book consists of eight articles that grew out of a seminar and study group on "School and the Rights of Children," held at the University of Wisconsin, Madison during the spring of 1973. The book is intended to establish a healthy perspective on the extension of the rights and liberties of children in the public schools. The collective view of the authors is that a process of conflict resolution is essential to avoid continued battle over the issue of students rights versus the prerogatives of educational institutions. The individual articles include the following: "Morality, Science, and the Use of the Child in History," "Student Rights and the Social Context of Schooling," "Social-Psychological Concepts and the Rights of Children," "Student Rights and the Misuse of Psychological Knowledge and Language," "The Nature of Claims for Student Rights," "Legal Precedents in Student Rights Cases," "Trends, Conflicts, and Implications in Student Rights," and "Toward Increasing the Potency of Student Rights Claims: Advocacy-Oriented Policy Recommendations." The appendix contains a model High School Student Bill of Rights adopted by the Madison (Wisconsin) Public Schools. (JG)

Descriptors—\*Educational Administration, Educational Economics, \*Educational Objectives, \*Educational Planning, Higher Education, Models, Private Colleges, \*Program Evaluation

This study uses a model to analyze long-range educational planning for the achievement of educational purposes, goals, and objectives. The study was intended to examine planning from a broad perspective that includes the objectives, administration, and economics of education. Much of the analysis applies to public as well as to private institutions and to colleges and universities as well as to elementary and secondary schools; however, special emphasis is given to private institutions of higher education. Descriptors—\*Economic Factors, \*Educational Finance, Educational Research, Elementary Secondary Education, Housing Patterns, Measurement, Measurement Techniques, Social Differences, \*Social Factors, \*Socioeconomic Status, Suburban Environment, \*Suburban Schools, Suburbs

This paper reports on a continuation of a previous investigation of social and economic inequalities among suburban school districts, points out some of the measurement problems encountered while engaged in this task, and summarizes some literature in economics and sociology that relates to this topic. The empirical research tested three hypotheses: school districts in at least some metropolitan areas are becoming less alike regard to their stock of human resources; school districts in at least some metropolitan areas are becoming more alike with regard to certain fiscal characteristics such as per pupil expenditures, property valuations, and tax effort; and the expenditure levels of school districts in at least some metropolitan areas are becoming increasingly determined by the material and human resources found in those districts. The first hypothesis is not strongly supported, with the possible exception of the income measurement. The second hypothesis is strongly supported, though the movement toward equality may have been more a phenomenon of the 1950's than of the 1960's. The third hypothesis is also strongly supported. The paper includes conclusions, tables of data, references, and appendices that define terms and deal with statistical complexities. (Author/IRT)

Materials, \*Staff Improvement, Training, Training Objectives, Training Techniques

This sourcebook was developed to provide school personnel with efficient and effective access to information on available training products. It should be viewed as a resource to increase awareness and understanding of new products—products that train personnel in setting program goals, planning for development, and performing evaluation. There are three main sections. The first section, Orientation, presents a view of instructional planning and management held by the Far West Laboratory. This section also includes the criteria by which the programs and resources described were selected. The second section, Program Reports, describes 15 program packages that can be implemented within a school district to meet specific needs for staff development or training. A chart organizes key information about all 15 programs so that each can be reviewed and compared quickly and easily. Each report should provide the decision-maker with enough information to decide whether to preview the program. The third section, Training Resources, presents an annotated list of 27 supplementary materials. These resources are mostly reference books, handbooks, textbooks, monographs, and case studies that are organized topically under five major areas. (Author/IRT)

Development of the Building Description System (BDS) was undertaken to explore use of the computer to construct models of complex physical systems. A fundamental goal of this work is a computer system capable of replacing drawings as the primary description for design and construction of buildings. This paper presents an overview of the database configuration of BDS focusing on (1) the general facilities for describing an element in a concise manner and enabling easy definition and alteration, and (2) the organization of information about a very large number of elements, so as to allow real-time manipulation and accessing according to a variety of criteria. Identifiers—\*Colorado

Administrator renewal is a broad and complex topic with numerous subtopics. This report is limited to procedures and processes many school districts and their administrators use to develop professional growth opportunities for educational leaders. It also describes the activities, goals, and objectives of the Colorado Department of Educa-

tion in encouraging and assisting interested Colorado school systems to organize staff development programs for their administrators. The report is divided into three sections, each of which answers a question: What is the administrator renewal concept? What is the nature of the programs school districts organize? What is it that the Colorado Department of Education does to encourage and assist districts to organize such programs? (Author/IRT)

Identifiers—\*Michigan

This bulletin was prepared to acquaint superintendents with changes that may occur in their administrative patterns because of the effect the steadily decreasing number of live births is having on the school population. The available methods of predicting future enrollments in a district are outlined, and the effects a decline may have on facility use, staffing, operational efficiency, and curriculum design are discussed. Suggestions are given for possible alternative uses for buildings and for a building's disposal in the case that a district will experience an enrollment decline sufficient to justify these steps. The political and legal aspects of school closings are examined and recommendations are made. Appendixes present the cohort survival method of projecting enrollment and the material on school closing prepared by the Birmingham (Michigan) board of educa-

tion (including criteria for school closing and alternatives for use of classroom space). A bibliography is also included. (Author/IRT)

Designed to serve as a handy and useful reference for everyone in the education community, this handbook offers an overview of what a school public relations program should do and a general guide to constructing a program that has a good chance to succeed. It is intended to make evident the great need for everyone connected with the school to communicate with the public on a straightforward, thorough, and continuing basis. The guidelines and ideas contained are offered as suggestions rather than as hard and fast rules. Chapters discuss the need for public schools to communicate, the foundation of a public relations program, the design of the program, who should communicate, the media, the production of publications, budget elections and bond referendums, the board meeting's place in the public relations program, criticism and crises, and evaluation and feedback. Numerous appendixes contain suggestions from other sources. A bibliography is included. (Author/IRT)

Descriptors—\*Educational Accountability, \*Educational Assessment, Elementary Secondary Education, State Legislation, \*State Programs

The author begins his discussion of accountability with an examination of its development, including its historical origins and the role of the federal government. The evolution of accountability programs at the state level is also considered. Included are brief indications of the directions taken by Pennsylvania, Florida, Colorado, and Michigan. Before concluding with a discussion of the continuing challenge accountability presents to educators, the author takes a brief look at the negative reactions accountability has elicited from legislators, administrators, teachers, and students. Identifiers—\*Illinois

This is an analysis of the current Education Association model collective bargaining agreement. This document is intended to provide aid and assistance to board bargaining teams and negotiators; it is not a substitute for professional assistance where such help is indicated. The board of education-oriented clauses included in the analysis indicate sample language only; the clauses do not present model or recommended language. The substance, content, and consequences of American Federation of Teachers contract proposals in most districts will be quite similar to those included in this model. The areas covered are recognition, employee evaluation and termination, employee compensation and fringe benefits, leaves, grievance procedure, negotiation procedure, the effect of the agreement, reduction of teachers, and minimum necessary contract clauses to be proposed by the board of education. These latter clauses cover strikes and lockouts, management rights, and waiver of additional bargaining. (Author/IRT)

The purpose of the annual leadership conferences is to establish a continuing forum to stimulate dialogue among special education leadership personnel from the public schools, university training programs, and state education agencies. A critical factor in the selection of topics was the recognition that leaders in the field must design their programs to contain internal change systems that prohibit static programming. Papers included in the first volume were related to the emerging need to develop services and training systems defined as noncategorical and performance-based rather than categorical and etiologically based. The second volume includes papers that deal with the implications of recent litigation and court findings for the development and conduct of special education leadership systems. (Author/MLF)

Proposed in the report is a model quantitative cost accounting system designed to help school districts gather and report data useful in determining equitable reimbursement formulas for special education as compared with general education. Included are sections on the approach and methodology used to construct a hypothetical school district, concepts underlying the proposed cost system (such as ongoing analysis of planned versus actual expenditures), advantages of a standard cost system in special education (such as enabling educators to compare the costs of actual and alternative educational programs), curriculum and accounting applications, possible uses of the system by legislators and school administrators in such areas as preparing budgetary requests and planning future program, and pre-implementation recommendations (such as field testing the system in actual school districts). Discussed in a concluding section is the operation of the cost accounting system in a hypothetical school district. Two separately bound indexes contain detailed statistical and descriptive data on the hypothetical district. (LH)

**Descriptors**—Aurally Handicapped, Educable Mentally Handicapped, Elementary Secondary Education, Emotionally Disturbed, \*Equipment, Exceptional Child Education, \*Handicapped Children, Hospitalized Children, \*Instructional Materials, Learning Disabilities, \*Publications, Speech Handicapped, \*Student Evaluation

Presented is a list of suggested equipment and material for educating learning disabled, younger and older trainable retarded, emotionally disturbed and socially maladjusted, homebound/hospitalized, speech handicapped, elementary and secondary mentally retarded, visually handicapped, and hearing impaired children. Information on materials usually includes the name and address of the distributor, cost, and a brief description. Some section areas also provide information (title, author, length, cost, distributor, and description) on publications for teacher resources. It is noted that the equipment, programmed materials, and diagnostic materials were developed for basic classrooms and therefore, each teacher should adapt the list to meet the needs of her individual situation. **Programs for the Emotionally Disturbed: A Handbook of Guidelines and Evaluative Data on Five Instructional Models. 1974-1975.**

Alachua County Schools, Gainesville, Fla.

Spons Agency—Bureau of Elementary and Secondary Education (DHEW/OE), Washington, D.C.

Pub Date 75

Note—129p.

**EDRS Price MF-\$0.76 HC-\$6.97 Plus Postage**

**Descriptors**—Crisis Therapy, \*Delivery Systems, Diagnostic Teaching, \*Educational Alternatives, Elementary Secondary Education, \*Emotionally Disturbed, Exceptional Child Education, Guidelines, Itinerant Teachers, Models, \*Program Descriptions, \*Program Evaluation, Public Schools, Resource Centers, Special Classes

**Identifiers**—Elementary Secondary Education Act Title VIB, ESEA Title VIB

Presented are guidelines and evaluative data on five instructional models implemented between 1972 and 1975 to educate emotionally disturbed students in Alachua County Schools (Florida). General information includes the philosophy of the program; a definition and list of characteristics of emotionally disturbed students; and an outline of screening, referral, identification, placement, and dismissal procedures. Described next are the rationales, educational techniques, advantages and disadvantages of the five instructional program models used: self-contained classroom, resource room, crisis intervention room, itinerant program, and diagnostic-prescriptologist. Five program objectives are explained and an evaluation of progress made in meeting them during 1972-74 is provided. Comparative data in the relative effectiveness of the five organizational models for instruction includes characteristics, strengths, and weaknesses of each model and a brief discussion of behavioral and achievement test data. Also reported are program objectives and evaluative data on the two models, resource and self-contained, considered most effective and continued during the 1974-75 school year. Parent education services are summarized. Appendices include forms used for screening, referral, identification, placement, and dismissal; and technical analyses of data. (LS)

**A Cooperative Prescriptive Developmental Program for Preschool Children with Handicaps in a Rural Setting.**

Pub Date Jul 74

Note—125p.

**EDRS Price MF-\$0.76 HC-\$5.70 Plus Postage**

**Descriptors**—\*Cooperative Programs, Diagnostic Teaching, Exceptional Child Education, \*Handicapped Children, Parent Participation,

\*Preschool Education, Program Descriptions, \*Rural Education, Screening Tests, \*Student Evaluation

Identifiers—Informal Assessment, \*Michigan

Described is a cooperative preschool program for 20 handicapped children on a rural Michigan setting. It is explained that the program involved screening procedures in a naturalistic environment, weekly parent training sessions, and diagnostic prescriptive teaching. Included in three appendices are examples of news releases about the program, samples of developmental evaluation forms and observation checklists, and the results of a survey completed by parents at the end of the program. How Can I Help My Child: An Answer for Parents of Young Children.

Duval County School Board, Jacksonville, Fla.

Pub Date Nov 74

Note—54p.; Developed by FLRS/Crown of Jacksonville

EDRS Price MF-\$0.76 HC-\$3.32 Plus Postage

Descriptors—Early Childhood Education, Games, \*General Education, Guides, \*Home Instruction, \*Individual Activities, \*Parent Role, Preschool Children

Identifiers—\*Parent Materials

Provided are suggestions and activities to be used by parents in working with their preschool children. Ten suggestions deal with questions such as how much time should be spent, how to praise the child, and what to do if the child misuses the materials. Specific instructions are given for 15 activities such as puppets, puzzles, teaching songs, and playing matching games. Instructions include why the activity is important to the child, what materials are needed and how to make them, and how to use the activity over a period of days. Also included are a list of 24 common household items that can be used to help a child and several songs, rhymes and finger-plays. (LS)

Descriptors—Color Television, \*Electromechanical Aids, Exceptional Child Research, \*Partially Sighted, Sensory Aids, \*Television, \*Typewriting, Visually Handicapped

Identifiers—Color Blindness, Farnsworth Dichotomous Test for Color Blindness, \*Low Vision Aids

The fourth in a series of Rand reports on information transfer problems of the partially sighted reviews earlier reports and describes an experimental secretarial closed circuit TV (CCTV) system which enables the partially sighted to type from a printed or handwritten manuscript. Discussed are experiments using a pseudocolor system to determine the most suitable color of print and background for use with the CCTV. Reading rates for normally sighted people using the CCTV are the focus of additional research reported. A final section compares the results and administration data for four methods of detecting visual color deficiencies, including the modified Farnsworth Dichotomous test for Color Blindness. Appended is information on the chromaticity of the Conrac color TV monitor. (CL)

Descriptors—Curriculum Design, Deaf Blind, Definitions, Delivery Systems, Demography, \*Educational Alternatives, \*Educational Trends, Exceptional Child Research, \*Individualized Instruction, Instructional Materials, Multiply Handicapped, Parent Role, Program Planning, Questionnaires, \*Severely Handicapped, Student Evaluation

Presented is a state-of-the-art report on individualized programming for the severely multiply handicapped based on questionnaires completed by personnel from 96 programs and site visits to 27 schools. Chapters 1-3 provide a statement of the problem and description of the sample (including demographic data and definitions of deaf-blind and multiply handicapped). Chapter 4 examines the goals and definitions of individualization for normal and multiply handicapped persons. Reviewed in chapter 5 are procedures for evaluation, referral and instructional goal setting. Data on such program factors as physical aspects, location of services and staff resources are summarized in chapter 6. Focused on in chapter 7 are alternatives for curriculum, instruction, behavior management, and materials. The written plan as it contributes to individualization is dealt with in chapter 8, and individualized programming

for parents is considered in chapter 9. Program responsibilities after the child leaves are reviewed in chapter 10 including discussions of followup and program evaluation. Chapter 11 reviews the problems involved in the process and makes recommendations for improved individualization. Among eight appendices are lists of communication, screening, self help, and cognitive assessment scales. (CL)

Home-Based Family Services: Report of the Georgia Outreach Project. Final Report.

Day Care and Child Development Council of America, Inc., Washington, D.C.

Spons Agency—Appalachian Regional Commission, Washington, D.C.; Georgia State Dept. of Human Resources, Atlanta.

Pub Date May 75

Note—69p.

EDRS Price MF-\$0.76 HC-\$3.32 Plus Postage

Descriptors—Case Studies, Child Development, Community Role, \*Delivery Systems, Demonstration Projects, \*Early Childhood, \*Economically Disadvantaged, Exceptional Child Services, \*Family (Sociological Unit), Health, \*Infancy, Nutrition, Parent Counseling, Physical Environment, Program Descriptions, Program Evaluation, Staff Role

Identifiers—Final Reports, Georgia Outreach Project

Presented is the final report of the Day Care and Child Development Council of America's Georgia Outreach Project, a home-based program of services for welfare families with children up to 6-years-old. The home-based service delivery design is described in terms of advantages over agency-oriented service delivery systems; the roles of staff members (home visitors, district supervisors, project director, and early childhood specialist); the goals for the children, parents, and communities involved in the project; and the demonstration component. Discussed are the geographical setting of the project, family profiles, the primary caregiver, project participation, families' financial status, housing facilities, and family assessments. The five major areas of project concern are noted as child development, home management and parenting, health and nutrition, physical environment, and community relationship. Five case studies are provided to illustrate the variety of families and home visitor styles of service delivery. Responses to a parent evaluation questionnaire are outlined, and some items are briefly analyzed. In a summary evaluation, the outreach model is seen as a viable alternative for providing services to young children and their parents. Also included are sample forms (such as the contact and meeting report form) and tables illustrating statistics (including the frequency of home visits). (SB)

Descriptors—Adolescents, Definitions, \*Enrichment, Exceptional Child Research, \*Gifted, \*Program Descriptions, \*Program Evaluation, \*Talent Identification, Verbal Ability

Identifiers—Humanistic Precocity

Reported are findings from the third year of a project concerned with identification and facilitation of humanistic precocity in early adolescence. The project focused on students who showed a precocious concern with and ability to reason about social, moral, and political problems. Described are attempts to define humanistic precocity and procedures used to select the 120 Talent Search winners for 1975. Content covered in social science and creative writing summer enrichment courses is outlined, and results of evaluation of both the courses and participant selection procedures are provided. Discussed are student counseling and information dissemination facets of the project. It is reported that humanistic precocity was found in quantitatively as well as verbally gifted students. Results of the

project are said to include the development of a successful curriculum for training humanistic precocity. Appendixes consist of research studies on the following topics: the personal significance of differential quantitative and verbal talent; the development of political reasoning in verbally talented children; humanistic precocity and general intelligence; and evaluation of a program for the enrichment of humanistic talent. Note—74p.

EDRS Price MF-\$0.76 HC-\$3.32 Plus Postage

Descriptors—\*Cognitive Development, \*Conservation (Concept), Early Childhood Education, \*General Education, \*Logical Thinking, Maturation, Research Projects

Investigated was the distinction between identity conservation and equivalence conservation in 180 preschool, kindergarten and third grade students. Ss were assigned to one of six different counterbalanced orders of presentation for the conservation task battery. The factors were age, task (identity/equivalence), criterion (judgment only/judgment plus explanation), and content area (length/weight). Among results were greater difficulty indicated for equivalence than identity conservation and significant performance improvement at every grade level for the transitivity tasks. (CL)

Identifiers—\*Illinois Test of Psycholinguistic Abilities

Summarized are 68 research studies from 1970 to 1975 on the Revised Illinois Test of Psycholinguistic Abilities (ITPA), particularly as it relates to learning disabilities. The reviews have been organized by the following areas (the number of studies in each section and sample study topics are in parentheses): studies comparing the experimental and revised editions of the ITPA (two studies including the performance of institutionalized retardates on the Peabody Picture Vocabulary Test and the two editions of the ITPA); validity studies (16 studies including a factor analysis of the revised ITPA with underachieving children); screening, prediction, and diagnostic studies (eight studies including an evaluation of several methods of predicting full-scale IQ from the ITPA); clinical, ethnic, and/or social class studies (12 studies including an examination of psycholinguistic abilities of grade 2 children of differing socioeconomic and ethnic background); school achievement studies on reading (12 studies including reading and psycholinguistic processes of inmate problem readers); school

achievement studies on spelling (two studies including the relationships between written spelling, motor functioning, and sequencing skills); and remediation studies (10 studies including an evaluation of the effectiveness of an enriched curriculum in overcoming the consequences of environmental deprivation). One-page summaries provide study information such as author, title, source, purpose, subjects, procedure, results, and comments. An additional section on short reports contains brief descriptions of six studies. (SB)

**Screening and Identification Procedures in the Child Service Demonstration Programs. Final Report.**

Arizona Univ., Tucson. Dept. of Special Education.

Spons Agency—Bureau of Education for the Handicapped (DHEW/OE), Washington, D.C.

Bureau No.—BR-H-127145B

Pub Date Jun 74

Grant—OEG-0-714425

Note—257p.

EDRS Price MF-\$0.76 HC-\$13.32 Plus Postage

Descriptors—Conceptual Schemes, Delivery Systems, Elementary Secondary Education, Exceptional Child Education, Exceptional Child Research, Guidelines, \*Identification, \*Learning Disabilities, \*Models, \*National Surveys, \*Screening Tests

Identifiers—Child Service Demonstration Projects

Described and analyzed are procedures used in 38 Child Service Demonstration Projects throughout the U.S. for screening and identifying learning disabled children (LD). It is emphasized that the purpose of the project was to report viable alternatives for screening and identifying LD children rather than to recommend one particular model or screening test as the best. Information given on each of the 38 projects includes the delivery system for intervention (such as an LD resource room), the initial entry system utilized (such as teacher referral), and the personnel involved in decision-making (such as parents and psychologists). Flow charts provided depict the information gathering, information transmittal, decision-making and administrative procedures used in determining a child's eligibility for LD intervention. Among findings reported are: that the resource room is the most prevalent delivery system for LD children in public schools; that almost 80 percent of the projects use teacher referrals to identify potential LD children; and that emotional disturbance is the condition most likely to be specifically invoked as an exclusion criterion. Appended is the interview form used to gather data on projects. (LS)

**Analysis of 1973 Participation of Handicapped Children in Local Education Programs (Including appendixes).**

DBS Corp., Arlington, Va.; Department of Health, Education, and Welfare, Washington, D.C. Office of the Assistant Secretary for Planning and Evaluation.

Pub Date Sep 75

Note—353p.

EDRS Price MF-\$0.76 HC-\$18.40 Plus Postage

Descriptors—Cultural Factors, Delivery Systems, \*Geographic Regions, \*Handicapped Children, Minority Groups, National Surveys, Program Effectiveness, \*Racial Factors, Research Needs, School Districts, \*Socioeconomic Influences, Special Education, Statistical Analysis, Statistical Data, \*Student Participation

Analyzed is the impact of regional, racial or ethnic, and socioeconomic factors on handicapped students' participation during 1973 in special education programs in more than 37,000 schools within 2,500 local U.S. school districts. Included are data on American Indian, black, Spanish surnamed, Asian American, and non-minority pupils enrolled in programs for the educable and trainable mentally retarded, special disabilities such as physical handicaps and specific learning disabilities, slow learners, and the severely emotionally disturbed. Noted among major findings are correlations between special education participation geographic locale (such as that overall participation is highest in the South and lowest in the West), minority pupils' enrollment (such as that minority pupils in general and black pupils in particular participate

at a much higher rate than their nonminority counterparts), and socioeconomic influences (such as that special education participation rates tend to be higher in districts which are smaller, less urban, poorer, and enroll predominantly black students). A section on additional findings includes information on national projections, special school enrollments, local service distribution, additional socioeconomic variables (such as percentages of Title I revenues), and alternate data analysis techniques. Also discussed are policy implications, recommendations for further research (including the need to reexamine current special programming efforts), major data sources analyzed, and technical analysis approaches. Two separate appendices contain extensive graphical information. (LH)

Descriptors—Administrative Problems, \*Aurally Handicapped, Educational Needs, Exceptional Child Education, Financial Support, \*Physically Handicapped, \*Program Descriptions, \*Program Evaluation, Program Planning, Regional Programs, State Programs, \*Visually Handicapped

Identifiers—Illinois

Key findings from an evaluative study of 16 Illinois regional programs for educating low-incidence disabled children are summarized; 12 recommendations are presented for organizing, delivering, and financing improved statewide services; and suggestions are offered for implementing basic recommendations in comprehensive programs for aurally, visually, and orthopedically handicapped students. The recommendations and their underlying rationale are discussed in Section 1, which stresses the need to provide both legal status (in the form of intermediate school districts) for regional education programs and full state funding of special education costs; to develop comprehensive instructional programs geared to specific handicapping conditions; and to improve communication channels among the regional programs, the Illinois Office of Education, and public and private schools. Included in Section 2 are detailed evaluations of regional programs outside of Chicago, Chicago area public and private school programs, the Area Learning Resource Center-Regional Educational Media and Information Service system, and a general

review of regional program financial management. Three appendixes contain information on the historical background of Illinois regional special education programs, study procedures, and 11 supplementary tables. (LH)

Identifiers—Rating Scale, Social Learning Curriculum, Social Learning Environment

Seventeen intermediate level classes for the educable mentally retarded were involved in an investigation of the factor structure of the Social Learning Environment Rating Scale (SLERS), an instrument designed to quantify teacher-student behavior based on the Social Learning Curriculum (SLC). The 17 classes were observed implementing six experiences (lessons) from Function VII (Emotional Security) of the SLC. Analyses was based on the following five factors: problem emergence, problem clarification, problem resolution, application of learning, and the social learning environment. A major finding was that the factor structure underlying the SLERS generally validated the theoretical foundation of the SLC from which it was developed. (LS)

Yonkers City School District, N.Y.

Spons Agency—New York State Education Dept., Albany. Div. for Handicapped Children.

Pub Date Jun 74

Note—101p.; Proceedings from Special Study Institute (Yonkers, New York, June 26-28, 1974)

**EDRS Price MF-\$0.76 HC-\$5.70 Plus Postage**

Descriptors—\*Conference Reports, Elementary Secondary Education, Exceptional Child Education, \*Handicapped Children, \*Individual Activities, Individualized Instruction, \*Science Activities, \*Sciences

Presented are proceedings and products from a special study institute on individualized instruction in science for the handicapped (New York, 1974) in which both teachers of the handicapped and regular classroom teachers participated. It is explained that objectives of the institute included acquainting teachers of special education with the research and development in the areas of science education, and developing competencies in writing instructional objectives for the classroom. Information provided includes the names of participants and a program outline. The major portion of the document consists of approximately 80 science activity cards developed by participants to teach topics such as textures, directionality, following a recipe, temperature, and magnets. Each activity card includes the following information: area taught by the developer of the activity (such as educable mentally retarded or learning disabled students), suggested grade level for the activity, title of activity, objectives, materials, and procedures. **An Adaptive Surfing Apparatus.**

Pub Date 75

Note—44p.

**EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage**

Descriptors—\*Adapted Physical Education, Adolescents, Case Studies, \*Equipment, Exceptional Child Research, \*Physically Handicapped, \*Recreation

Identifiers—Surfing

Reported is a study in which the effectiveness of an adapted surfing apparatus was evaluated for eight adolescents with upper extremity physical impairments. Related literature is reviewed, and a detailed analysis of the adapted device is presented. Case studies of the individual Ss are provided to demonstrate test performance in a pool and the ocean. Findings are said to confirm that the apparatus is safe, versatile in its adaptability to various disabilities, and useful for rehabilitation and recreation. (CL)

 Identifiers—Ontario (Toronto)

The 1975 school status of 696 students enrolled in Toronto special education (nonmedical related) programs in 1970 was examined to determine whether special education was effective in returning children to regular classes. Data indicated that of the 49 percent of the students remaining in the Toronto school system, 32 percent had returned to regular classes and 68 percent were still in special programs. Rates of return to regular classes varied according to specific program type, child's age, and the socioeconomic status of his family. (Author/CL)

 Identifiers—Kentucky (Louisville), \*Parent Materials

Described is a Re-Ed (re-education) program for treating emotionally disturbed children (ages 6 through 12 years). The residential behavior modification program is discussed in terms of facilities (physical environment, length of program, and admission criteria), activities (such as field trips, yoga, and special education classes) staff and training (including ancillary services in the form of workshops, parent counseling groups, practicum or internship training, staff meetings, and demonstration programs), parent counseling (which includes effectiveness training and weekly sessions with the children's teachers), and costs (which depend on the area in which the facility is established). Brief sections are included on program evaluation and replication. A parent handbook relating to the Re-Ed program comprises the remaining half of the text and covers topics such as accreditation, placement, and behavior diaries in question-answer form. (SB)

 Identifiers—\*Maryland

Reported are the findings of a state survey of 123 regular and special education teachers' and administrators' opinions on the training of teachers of exceptional children. Chapter 2, on the development of the instrument for identifying needs, includes brief sections on item selection, item grouping, instrument form, distribution, treatment of data, and determination of priority needs. Expressed priority needs (such as parent counseling and vocational education programs) relating to the community, colleges and universities, public schools, teachers, and the state agency are detailed for each group of respondents (such as special education supervisors and private agency representatives) in Chapter 3. A short summary in Chapter 4 outlines the need for the survey and information obtained from survey data (including a rank order of priorities as seen by the total sample and each referent group). Also provided are appendixes on the survey instrument and computer data results and tables, figures, and graphs illustrating statistics such as the rate of returns of referent group. (SB)

Thirty-six normal 5-year-olds and 60 educable mentally retarded (EMR) students with a mean age of 7 years were tested to determine whether specific formats of interrogatives would be instrumental in inducing the generation of effective verbal mediators. Ten EMR Ss and 6 normal Ss were tested on 21 paired associates in each six experimental conditions: labeling, sentence generation, sentence repetition, response to Why "A" (auxiliary did not function as the main verb) and response to why "B" (auxiliary functioned as the main verb). Analysis of correct response indicated that Ss in the three question conditions performed better than Ss in the nonquestion conditions. No differences existed between the two subject categories. The question conditions were found to induce greater semantic analysis in the Ss than the nonquestion conditions. (Author/CL)

Described are the results of a formative evaluation of the time with a clock unit involving evaluations by teachers and performance of 57 preprimary and primary class educable retarded students. The unit is comprised of three sections: the clock (emphasizing the need for telling time and recognition of the clock and its purpose), time telling (including basic terms and introductory activities), and More Time Telling (focusing on more complex time procedures). The bulk of the document presents the following information for each section: description of the lessons' objectives, student performance data, teacher evaluations, and summarized comments from a teacher review board meeting. Among curriculum revisions cited are changes in material design, content, sequencing, and testing procedures. Included in five appendixes are a sample evaluation form and a description of the revised unit. (CL)

Described is the evaluation of the pilot-test version of the Measurement of Length Unit, part of an instructional program developed by the Vocabulary Development Project, with 80 educable or trainable mentally handicapped primary grade children in either special classes within regular schools or in special schools. Feedback for the formative evaluation stage came from results of pretesting and posttesting, written evaluations of lessons by teachers, and classroom observations. Results are presented for each of the eight lessons in terms of objectives, performance of classes from neighborhood or special schools, and an interpretation. Summarized are comments from the teacher review board meeting. Results are discussed in terms of need for instruction, instructional effectiveness, design of the materials, content, sequencing, and test instruments. Results are seen to support the need for measurement instruction, with major changes being made in the sequencing of instruction and revision of the test. Appended are a description of the pilot-test version of the length unit, the pilot-test questions, a sample evaluation form, classroom observation forms, a description of the revised version of the measurement of length unit, and the revised length unit test. Described is the evaluation of the pilot-test version of the Calendar Unit, part of an instructional unit developed by the Vocabulary Development Project, with 43 educable mentally retarded primary grade children from either special classes within regular schools or from a special school. Feedback for the formative evaluation came from comments of teachers, pretesting and posttesting of behavioral objectives, and classroom observations. Results are presented for each of the nine lessons in terms of objective, testing performance

of classes, interpretation, and informal comments of teachers. Summarized are comments made at the teacher review board meeting. Results are discussed in terms of need for instruction, instructional effectiveness, design of the materials, content, sequencing, and test instruments. Results are seen to support the need for a calendar unit with changes being made in such areas as improving effectiveness of instruction for specific concepts. Appended are a description of the pilot-test version of the "Time with the Calendar" unit, experimental test questions, the calendar unit (book 1) pilot test questions, sample evaluation forms, calendar unit (books 2 and 3) pilot-test questions, and the revised "Time with the Calendar" tests. Descriptors—\*Comprehension, Early Childhood, Exceptional Child Research, \*Language Development, Mentally Handicapped, \*Monogolism, Questioning Techniques, Receptive Language, \*Verbal Ability

Evaluated was the comprehension of maternal and experimentally posed Wh questions (such as what, why and who) by two 5-year-old Down's Syndrome children. Weekly taperecordings of mother-child play situations and videotapes of individual sessions with the experimenter were analyzed in terms of form, content, and appropriateness of Ss' response. Results indicated similarity with the first stage of normal children's interrogative comprehension. Findings had implications for teachers' questioning techniques. (The description of photographs used with the experimental set of Wh questions is provided in one of three appendices). (CL)

Descriptors—\*Curriculum Evaluation, \*Educable Mentally Handicapped, Elementary Education, \*Evaluation Methods, Exceptional Child Research, Measurement, Mentally Handicapped, \*Money Management, \*Time

The performance of 272 elementary school aged educable retarded children was used in the final evaluation of the five unit Money, Measurement and Time program. Criterion referenced pre- and posttests were administered to assess the effectiveness of each unit, and A Cognitive Abilities Test evaluated Ss' general improvement in non-content-specific areas of functioning. Analysis of results indicated that the gains in the Money and Time with the Clock units were significant, while the gains on the Length and Measurement of Weight units were not as impressive. Item analyses of the unit tests demonstrated that Ss' learning went beyond the immediate instruction they had received. Data on nonretarded children's performance provided normative information. Results suggested revisions in specific content for each unit. (CL)

Descriptors—\*Educable Mentally Handicapped, Elementary Education, Exceptional Child Research, \*Learning Characteristics, Mentally Handicapped, \*Paired Associate Learning

The effects of five elaboration conditions on the paired associate learning of 50 educable mentally retarded children (mean age 9 years) were investigated. Four of the conditions were included in a two factor design (type of relation x familiarity); the fifth (nonsense condition) was included as an outside control. Ten children were tested in each condition. Results indicated that quality and familiarity of stimuli influenced elaborational effectiveness. The dominant finding was a significant interaction between type of relation and familiarity, with positional-unfamiliar elaborations being the least facilitative in the two factor design. The nonsense condition produced the poorest performance levels across the five conditions, especially for Ss identified as being more severely retarded. (DB)

Descriptors—\*Curriculum Evaluation, Exceptional Child Research, Instructional Materials, Mentally Handicapped, \*Money Management, \*Program Effectiveness, \*Trainable Mentally Handicapped

One hundred ninety-four trainable retarded 6- to 34-year-old students participated in a field test of the Money Unit, one of five instructional units in the Money, Measurement and Time Program. Pre- and posttests of the Money Skills Test and the Money Expressive Test were administered to Ss, and 11 teachers completed evaluations of the unit. Ss' performance gains on both tests were found to be significant, and teachers' evaluations further supported the useability and effectiveness of the Money Unit. Revision recommendations suggested by the teachers centered on the areas of the material's general format and suitability for trainable retarded students. (CL)

Identifiers—\*Massachusetts

Intended for Massachusetts community college personnel, the document presents suggestions and consideration for providing services to handicapped students. Based on questionnaires from approximately 200 key college personnel, the

guide emphasizes eight issues (topics are in parentheses): the student population to be served (blind, partially-sighted, deaf, partially-hearing, epileptic, and students with other physical disabilities); program management (coordination, programs for deaf students, and sources of funding); architectural accommodation (rules and regulations of the Architectural Barriers Board and plans for architectural accessibility); admissions (the screening process and the admissions interview as a planning tool); counseling and advisement (attitudes toward physically disabled individuals, responsibilities of the counselor, factors to consider when counseling the hearing impaired student, and psychometric test); instructional services (support services, procedures for instruction and testing, curriculum materials, aids and equipment, and remedial instruction); and job placement (interagency coordination, job adaptation, resources to facilitate job placement, and job development). Each chapter is followed by a resource section which gives information for contacting persons and/or agencies and for obtaining publications applicable to the needs of personnel. (SB)

Descriptors—\*Educational Programs, \*Emotionally Disturbed, Etiology, Exceptional Child Education, Exceptional Child Services, Mental Health, \*Needs Assessment, \*Program Planning, \*Therapy  
Identifiers—Maryland Data System for the Handicapped

The report deals with the needs of all children as well as emotionally disturbed children. It outlines problem areas and makes some recommendations. Criteria and guidelines for proposals dealing with services for emotionally disturbed children and adolescents also appear. Symptoms often seen in children and adolescents are described in commonly-used terms. Treatment is suggested according to the severity of the condition. The first quarterly report of the Maryland Data System for the Handicapped is discussed. Regional estimates of needs of emotionally disturbed children and services available are indicated. A summary of the Maryland Department of Education's programs and plans for handicapped children is given. (Author)

Descriptors—Elementary Secondary Education, Exceptional Child Education, Mentally Handicapped, Needs Assessment, \*Program Planning, \*State Programs  
Identifiers—Connecticut, \*Developmental Disabilities

Reported is the development of the Connecticut state plan to assess the needs of the developmentally disabled and establish service priorities. An overview of the planning system includes information on planning processes and the model components including needs assessment, priority setting, program development and selection, program approval, and program implementation. Described in the section on needs assessment are developed of 3- and 1-year priority statements based on data collection and analysis and preparation of an assessment report. The priority setting process is seen to involve ranking and voting by council members of identified needs to determine high, middle, and low priority categories. Changes are proposed for the grant

application system to include planning and evaluation components. Recommendations are given in the areas of comprehensive planning, needs assessment, priority setting, and project management including exploring cooperative funding for projects and offering grants for a variety of purposes. Appended is the author's vitae and various forms used in the planning process. (DB)

**Descriptors**—Adults, Clinical Diagnosis, Exceptional Child Research, Handicapped Children, \*Labeling (of Persons), \*Minimally Brain Injured, \*Screening Tests, Sheltered Workshops, \*Test Validity, Young Adults

Fifty-four clients (13- to 52-years-old) in an Appalachian sheltered workshop were administered the Slosson Drawing Coordination Test (SDCT) and the Bender Visual Motor Gestalt Test. Twenty-nine Ss were labeled possibly brain damaged by the SDCT, and 17 Ss by the M. Hutt scoring system for the Bender-Gestalt. Two psychologists using all available data and clinical judgment classified only 13 in a similar category. Results indicated the need for caution in using the SDCT as a screening instrument for brain damage among Appalachian clients. (Author)

Nebraska Univ. Medical Center, Omaha. Meyer Children's Rehabilitation Inst.

Pub Date [75]

Note—9p.

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

**Descriptors**—\*Audiovisual Aids, Cerebral Palsy, \*Diagnostic Teaching, \*Diagnostic Tests, Early Childhood Education, Elementary Secondary Education, Exceptional Child Education, Infancy, Language Instruction, Learning Disabilities, Mentally Handicapped, \*Multiply Handicapped, Physically Handicapped, Reading Difficulty, \*Resource Guides, Self Care Skills  
**Identifiers**—Developmental Disabilities, Meyer Children's Rehabilitation Institute

Presented is an audiovisual lending library resource list of nine slide-tape package, 13 videotapes, three 16mm films, and six booklets concerning educational and assessment techniques applicable to children from infancy to adolescence with physical or mental handicaps, learning disabilities, or developmental disabilities. Included for most items are title, a brief description, suggested audience, length, and date of production or publication. Resources listed are usually available for public loan or purchase from the Meyer Children's Rehabilitation Institute (Omaha, Nebraska), and information is provided about prices and how to order. **Developing an Operational Mental Health Center with Service Provisions for the Public School System. Maxi II Practicum.**

Pub Date Jun 75

Note—62p.; Ed.D. Practicum, Nova University

**EDRS Price MF-\$0.76 HC-\$3.32 Plus Postage**

**Descriptors**—\*Elementary Secondary Education, \*Emotionally Disturbed, Exceptional Child Education, \*Interagency Cooperation, \*Mental Health, Practicums, Program Design, Program Evaluation, School Community Relationship, \*Socially Deviant Behavior

The purpose of the practicum was to develop an effective relationship between a community mental health center and the public schools. To highlight the potential effectiveness of such a relationship, the practicum involved specific provisions for services to classes of socially maladjusted and/or emotionally disturbed children. The results of the practicum demonstrated the value of involving mental health professionals as an integral part of the public school system and clearly indicated that both staff inservice programs and direct involvement programs with children could be significantly beneficial and should be continued and expanded. **Identifiers**—Developmental Disabilities

Written for parents of young multihandicapped children who experience coordination difficulties or delayed development, the book explains how to teach independent eating habits, using a spoon or other utensil. Parts 1, 2, and 3 deal with such topics as foods to use when beginning; head control problems; how to evaluate initial skills and subsequent progress; mouth skills (including lip use, chewing, and swallowing); and spoon skills (including picking up and grasping the spoon, ways of adapting standard utensils, and special hints for teaching the blind). Parts 4 and 5 contain lists of additional references, firms that supply adaptive equipment, and sample progress charts. Thirty-five photographs which show parents teaching their children how to eat are used to illustrate major points. (LH)

**Identifiers**—Low Vision Aids, Optacon

The booklet contains 12 selected papers on equal educational opportunity for visually handicapped (VH) children that were presented at the 52nd biennial conference (June, 1974) of the Association for Education of the Visually Handicapped. Included are presentations on the following: the history and concept of equal educational opportunity (B. Lowenfeld), competencies needed by teachers of VH students who may also have specific learning disabilities (J. McCarthy), assessing the chronological development of VH children's spatial concepts (K. Szatlocky), a comparative study of cognitive development among blind and sighted students (K. Simpkins and B.

Stephens), new directions in services for VH infants and preschoolers (J. Brown), preschool children's cognitive characteristics (M. Poulsen), methods and materials for teaching elementary school students to read with the Optacon (G. Lutz), closed circuit television as a low-vision reading aid (R. Schnur et al), the use of compressed speech and a listening skills training program with handicapped students (A. Connor), career education and the handicapped (K. Hoyt—also see EC 073 115), career education for the VH (J. Best), and the impact of the Supplement Security Income Program upon rehabilitation of blind or disabled individuals (F. Crawford). (LH)

**Raising Consciousness of Key Publics About the Needs of Gifted and Talented.**

National/State Leadership Training Inst. on the Gifted and Talented, Los Angeles, Calif.

Pub Date Feb 75

Note—22p.; Report of a National Planning Conference (New York, New York, December 9, 1974)

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

**Descriptors**—Child Advocacy, Conference Reports, \*Discriminatory Attitudes (Social), Educational Alternatives, \*Educational Needs, Equal Education, Exceptional Child Education, \*Gifted, \*Information Dissemination, Public Opinion, \*Public Relations, Regular Class Placement, Talent Identification

Presented is the report of a 1974 planning conference on raising public consciousness about the needs of the gifted and talented (GT). Noted are the following major conference purposes: to increase interorganizational awareness of activities to expand opportunities for GT individuals, to identify mechanisms for improving public awareness of GT needs, and to identify critical messages and constraints in communicating with key audiences. Cited are constraints (mistaken assumptions) which prevent commitment to and implementation of better programs and services for GT children (such as lack of public understanding that GT pupils need special differentiated help; that special services need not be costly; that programs can be provided within the educational mainstream; and that GT students exist among various racial, ethnic and socioeconomic groups). Stressed is the need for advocacy and communication efforts to be targeted to key state and local decision makers (such as board of education members and legislators), parents, and regular classroom teachers. Recommendations for further action include development and distribution of a communication matrix (a sample matrix chart is provided) of GT advocacy organizations together with solicitation of input from key representatives outside the advocacy groups. The conference agenda and a list of participants are appended. (LH)

**The Design, Evaluation, and Educational Program Audit of a District-Wide K-12 Mentally Gifted Minor Program.**

Los Angeles County Superintendent of Schools, Calif.; Rowland School District, Rowland Heights, Calif.

Pub Date Apr 75

Note—18p.; Paper presented at the Annual International convention of the Council for Exceptional Children (53rd, Los Angeles, California, April 20-25th, 1975)

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

**Descriptors**—\*Educational Accountability, Elementary Secondary Education, Exceptional Child Education, \*Gifted, \*Performance Criteria, \*Program Evaluation, \*Staff Role  
**Identifiers**—California, Rowland Unified School District

Presented is a paper, delivered at the 1975 Annual International Convention of the Council for Exceptional Children, on planning and implementing an educational program audit for gifted students (K-12) of the Rowland Unified School District in California. Briefly explained in the introduction are the roles of the district evaluator and the county program auditor. A question and answer format is utilized in Section II to provide an overview of the audit process (including purpose and definition of the audit, professional role of the auditor, and stages such as developing performance objectives and designing an effective

evaluation system). Sections III, IV, and V deal with steps in implementing one program audit plan; recommendations for improving future evaluation and program audit procedures (such as better coordination and timing of on-site visits); and program audit advantages (such as no-cost program evaluation by an external expert and identification of needed program improvements). Provided is a bibliography of approximately 40 references on educational program evaluation and audit. (LH)

*Geiger, William L.*

**The Perceptual- and Gross-Motor Ability of Mentally Retarded Children.**

Central Michigan Univ., Mount Pleasant.

Pub Date [75]

Note—23p.; Paper presented at the Mid-West AHPER Convention (Grand Rapids, Michigan, 1975)

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

**Descriptors**—Childhood, Etiology, Exceptional Child Research, \*Mentally Handicapped, Motor Development, \*Perceptual Motor Coordination, \*Performance Factors, \*Physical Development, Physical Education

Compared were the perceptual and gross motor abilities of 30 mentally retarded and 25 nonretarded 10- to 12-year-old children. Performance data on such motor tasks as the agility run, 20-yard dash, obstacle course, and target hop were recorded, with separate data for the retarded Ss on the basis of etiological classification (Down's Syndrome, cultural-familial, and other). Among findings were significant differences between the performances of nonretarded and retarded groups and among the etiologically classified groups. (CL)

**An Approach to Meeting the Educational Needs of Secondary Special Education Students. Final Practicum Report.**

Pub Date Jul 75

Note—259p.; Ed.D. Practicum, Nova University  
EDRS Price MF-\$0.76 HC-\$13.32 Plus Postage  
Descriptors—Exceptional Child Education, Guidelines, \*Handicapped Children, \*Learning Laboratories, Literature Reviews, Models, \*Program Descriptions, Program Evaluation, \*Secondary Education

The design and evaluation of a secondary special education program is described. The program is noted to incorporate four phases: Phase I evaluating the learning laboratory (LL) concept; Phase II-field testing the exportability of the LL concept; Phase III-providing a document explaining how to organize, staff, and operate a LL; and Phase IV-implementing the LL concept in various districts. Among topics covered in a section on practicum design are a LL description, LL research, LL cost analysis, and a summary of cognitive data gathering methods. Four brief chapters present information on an approach to meeting the educational needs of secondary special education students, evaluation of the program, the efforts of program participants, and a summary and conclusion. The organizational structure of the high school lab is outlined for four school settings. Appendix materials comprise the bulk of the text and include the LL concept manual for administrators, detailed information on data collection and analysis, the organizational structure of the LL model, a description of a transported model, literature research, the practicum proposal, the Practicum interim report, and the annual Texas superintendents report. EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage

Descriptors—\*Classification, Clinical Diagnosis, Exceptional Child Research, \*Handicapped Children, \*Labeling (of Persons)

Identifiers—Final Reports, Project on Classification of Exceptional Children

Presented is a summary of the Final Report of the federally funded Project on Classification of Exceptional Children. Reviewed is the scope of the project which emphasized such aspects as the effects of labeling on individual children and the technical adequacy of diagnostic and classification systems. Among limitations ascribed to categories and labels are imprecision and insensitivity to individual changes. Problems in institutional care resulting from labeling are considered. Individualized program planning is seen to be one alternative approach to traditional classification.

Provided are major project recommendations in seven broad areas (including funding and manpower training), and listed are seven priority needs including support for parents and fairness to disadvantaged and minority group children). (CL)

Identifiers—\*Danish

This is one of a series of self-teaching textbooks initially prepared for the Armed Forces and now offered to the public. The text is designed to be used with a native speaker of Danish or with the accompanying recordings. The textbook is divided into three major sections, each consisting of five learning units and one unit for review. Each unit is centered around some practical aspect of daily life, and covers basic sentences, pronunciation practice, word study, grammar and conversational situations. Each unit concludes with a "finder list" of vocabulary introduced in the unit. The emphasis is on speaking rather than on reading or writing. The text concludes with a list of useful words and phrases, spelling check lists, a Danish-English word list and English-Danish word list. Both word lists contain all the vocabulary introduced in the course. (CLK)

Bachmann, James K.

English Face-to-Face: The Non-Verbal Dimension of Conversation.

Pub Date May 73

Note—12p.; Paper presented at the Annual Meeting of TESOL (San Juan, Puerto Rico, May, 1973)

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—Body Language, Communication (Thought Transfer), \*Cultural Awareness, Cultural Traits, \*English (Second Language), \*Language Instruction, \*Nonverbal Communication, Paralinguistics, Second Language Learning, Teaching Methods

Nonverbal communication is important in foreign language teaching and learning because of its variation in form, meaning and distribution from one culture to another and because of its extensive use in the communicative process. Cross-cultural misunderstandings result from incorrect interpretations of the tone of voice, body motions, facial expressions, and the distances used when people communicate face-to-face. These misinterpretations are not obvious, and probably are not as most people might assume, since they often occur below the level of awareness. Therefore, both teaching and testing procedures should allow for nonverbal communication. Dialogs can include gestures which can be either demonstrated by the teacher or shown on film and videotape. Varying tones of voice can be used to indicate emotions just as vocabulary is used by writers to express their attitudes toward their subjects. Teachers can thus add life to the printed words in their textbooks and stimulate student interest and motivations. (Author)

Descriptors—\*French, Linguistic Theory, Phonemics, \*Phonetic Analysis, Phonetics, Phonological Units, \*Phonology, \*Structural Analysis, Syllables

## Identifiers—\*Word Boundaries

It is generally agreed among French linguists that the word has no phonetic or phonological status in French. This position reflects mostly pedagogical considerations and preoccupation with surface phonetic facts and demarcative signals. Investigation of processes of a more abstract nature reveals, however, that a certain number of rules summarizing phonotactic processes of Modern French must incorporate word boundaries as part of their environments. Identifiers—\*Illinois (Chicago)

Although bilingual education has existed in this nation's schools since the nineteenth century, during the last two decades there has been a major increase in both the number and the scope of bilingual-bicultural educational programs. This publication seeks to provide a foundation for the coherent, comprehensive development of educational programs for children who speak a language other than English. The philosophy on which the design is predicated is that two languages and cultures are both taught and used as mediums of instruction in a truly bilingual-bicultural education program. The aim of such a program is to enable students to function with equal facility in two languages and two cultures. After setting forth several important considerations, the design presents overall needs and goals for five interrelated elements of a bilingual-bicultural program: instruction, staff development, community involvement, curriculum development, and management. The needs and goals presented were assessed and evaluated by people experienced in developing and operating bilingual education programs in Chicago. The publication includes a selected listing of sources of information and a selected bibliography. Both may be helpful in developing bilingual-bicultural education programs. A copy of the 1973 Foreign Language Survey of Chicago Public Schools accompanies the document. (Author/CLK)

A Proposal for the Semantics of Tenses in English.

Montreal Working Papers in Linguistics, Vol. 1, March 1974.

McGill Univ., Montreal (Quebec); Montreal Univ. (Quebec); Quebec Univ., Montreal.

Pub Date Mar 74

Note—18p.

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—\*English, Form Classes (Languages), \*Generative Grammar, Language Research, \*Linguistic Theory, Morphology (Languages), \*Semantics, Syntax, Time, \*Verbs

Identifiers—\*Verb Tenses

English tenses are discussed in terms of a unique ordering of three moments of time: the moment of speech, the moment of the event and the reference point. The aims of the paper are to: (1) show the usefulness of introducing the concept of reference point in tense analysis, (2) provide an account of how to construe reference points semantically, and (3) speculate on how to fit this semantics of tenses into a formal grammar of English. Reference point is defined as an expression which refers to a moment of time at which it is appropriate to utter some temporally-positioned version of the sentence in question, and as an expression that designates a time at which the speaker of the sentence might imagine himself as uttering some version of the sentence in question. This definition has to do with

speaker strategies, aims of discourse, and beliefs of the speaker. In this analysis, tenses are viewed as properties of entire sentences rather than as properties of verbs or verb phrases. A semantic approach is proposed, since tenses are not always marked morphologically or syntactically. Representations of all relevant tenses and sequence of tense rules can be generated by the proposed analysis. (CLK)

Descriptors—\*Child Language, Classroom Communication, \*Early Childhood Education, \*French, \*Language Development, Language Research, Language Skills, Nonverbal Communication, Phonology, \*Psycholinguistics, Sociolinguistics, Verbal Communication, Verbal Development

Identifiers—\*France

This is a research report on the acquisition and development of language in children from 4 to 6 years as observed in the pre-elementary grades. The research was done by a number of teams scattered throughout France, and this book is a collection of the papers prepared as a result of their research. The report is divided into five sections. The first section serves as an introduction and gives the objectives and the organization of the report. The second proposes ways of improving the level and structure of verbal communication in the classroom. The third section presents some non-linguistic facets of communication, describes the phonological component of the research and includes a presentation of the phonological system of French. The implementation of certain pedagogical experiments in the teaching of communication is described in the fourth section. The fifth consists of articles dealing with various approaches to the observation of language learning processes, including the sociological/psychosociological approach, the psychological approach, the linguistic approach and the psychopedagogical approach. Testing Oral Fluency. Rapport d'Activités de l'Institut de Phonétique, 1971-1972 (Report of the Activities of the Institute of Phonetics).

Université Libre de Bruxelles (Belgium). Institut de Phonétique.

Pub Date Oct 72

Note—14p.; Paper presented at the Annual Meeting of l'Association Belge de Linguistique Appliquée (September 25, 1972)

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—English (Second Language), \*Language Fluency, \*Language Instruction, Language Skills, \*Language Tests, Oral Expression, Scoring, Second Language Learning, \*Speech Skills, \*Testing

Identifiers—\*Communicative Competence

A description is given of experiments involving the standardization of aspects of oral fluency testing. Oral fluency is understood to imply a "communicative competence" requiring an ability to formulate accurate and appropriate utterances of more than one sentence in length. Throughout the test emphasis is laid on ease of application and relevance. In the quest for greater objectivity in testing procedures, linguistic, methodological and technical aspects are considered, together with tentative criteria for reducing the discrepancy ratio between scorers. Descriptors—Adverbs, Case (Grammar), Comparative Analysis, Consonants, \*Contrastive Linguistics, \*English, English (Second Language), Form Classes (Languages), German, \*Grammar, \*Language Instruction, Language Research, Phonology, \*Polish, Second Language Learning, Sentence Structure, Slavic Languages, Syntax, Transformation Generative Grammar, Translation, Verbs

This collection of papers is the first in a series resulting from the Polish-English Contrastive Project. The overall purposes of the project are to prepare a Polish-English contrastive grammar and to develop pedagogical materials. The basic model used for the research is the transformational generative one. The papers included in this volume are as follows: (1) "The Polish-English Contrastive Project," Jacek Fisiak; (2) "Contrastive Analysis in the Classroom," Waldemar Marton; (3) "Some Grammatical Implications of the Contrastive Analysis of English Sentence Adverbs and Their Equivalents in Polish," Tadeusz Zabrocki; (4) "Some Differences between English and Polish on the level of the Basic Sentence Pattern," Maria Lipinska; (5) "A Contrastive Analysis of Linking Verbs in English and German," Wolf-Dietrich Bald; (6) "Some Surface and Deep Aspects of Case in Polish and English," Stefan Konderski; (7) "'Must' and Its Equivalents in Polish," Piotr Kakietek; (8) "Some Remarks on the Relation between the Complementizer and the Form of the Verb in the Complement Structure in English and Polish," Anna Morel; (9) "The Polish and English Fricatives - a Problem in Phonological Equivalence," Andrzej Kopczynski; (10) "Aspects of Emotive Language: Intensity in English and Polish," Bogdan Lawendowski; (11) "On the Concept of 'Instrumental Case,'" Tomasz P. Krzeszowski; (12) "The Function of Translation in Foreign Language Teaching," Elzbieta Muskat-Tabakowska; and (13) "Bibliography of English-Polish Contrastive Studies in Poland," Tadeusz Zabrocki. Note—51p.; Course given at the Institute for Semantic and Cognitive Studies, Switzerland, March 17-22, 1975; For related document, see FL 007 164

Available from—Institute for Semantic and Cognitive Studies, Villa Heleneum, 6976 Castagnola, Switzerland (\$10.00)

EDRS Price MF-\$0.76 HC-\$3.32 Plus Postage

Descriptors—Applied Linguistics, \*Artificial Intelligence, \*Computational Linguistics, Linguistic Theory, \*Logic, Logical Thinking, Mathematical Logic, \*Philosophy, \*Semantics, Syntax, Thought Processes, Transformation Generative Grammar

Identifiers—\*Computational Semantics, Montague (Richard), Wittgenstein (Ludwig)

This course was part of a tutorial focusing on the state of computational semantics, i.e., the state of work on natural language within the artificial intelligence (AI) paradigm. The discussion in the course centered on the philosophers Richard Montague and Ludwig Wittgenstein. The course was divided into three sections: (1) Introduction—discussing trends in the philosophy of language in regard to the role and importance of formalization, and describing and giving some history of the three fundamental notions of logical syntax, meta-language, and an "Lsemantic" definition of truth; (2) Montague—describing his work on the formalization of natural language and giving an account of Montague grammar with examples; and (3) Wittgenstein—showing how some of his ideas are relevant to the present situation of AI and the way they clash with the views of the formalist school. The course emphasized the importance of partial/inductive knowledge in our understanding of language and concluded that to handle language "formally" on a computer, it is in no way necessary to accept tenets based on formal logic. The most fruitful approaches to understanding language are precisely those not subservient to a powerful logical or semantic theory. (TL)

**Descriptors**—Alphabets, \*Korean, Language Research, Native Speakers, \*Phoneme Grapheme Correspondence, \*Phonemic Alphabets, Phonemics, Phonology, \*Romanization, \*Writing, Written Language

This paper challenges from a practical point of view the idea that the phonemic principle is the most adequate or the optimal theoretical basis for devising a romanized alphabet for a language. In the past, romanization of languages, written or unwritten, have largely been based on the phonemic principle and have unnecessarily burdened the learner with the task of memorizing phonological rules. In the present paper, a strict distinction is made between a romanization for a practical purpose (i.e., for a foreigner) and a romanization for a scientific linguistic purpose (i.e., for a native speaker), because the learner does not have the same competence in the target language as the native speaker. Furthermore, a language is romanized, not for its native speakers who can read the language in their native writing system, but rather for those who do not use the same writing system. Korean is used as an example to demonstrate how romanization can be free of as many phonological rules as possible, and adhere as far as possible to the principle of "one sound, one symbol." Will the Real Bilingual-Bicultural Please Stand Up? A Non-Taxing Taxonomy. CATESOL Occasional Papers, No. 2.

California Association of Teachers of English to Speakers of Other Languages.

Pub Date 75

Note—6p.

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

**Descriptors**—Ambiguity, Biculturalism, \*Bilingual Education, Bilingualism, Cross Cultural Studies, \*Definitions, \*Educational Methods, English (Second Language), Intergroup Education, \*Teaching Methods, \*Vocabulary, Word Lists

A number of terms employed in the field of bilingual education are used interchangeably and incorrectly. Some of these are: English as a second language (ESL), English as a foreign language (EFL), Americanization, bilingual, bicultural, multicultural, multiethnic, cross-cultural, and intergroup. There is a lack of consensus as to the meaning, perspectives and proper uses of these terms, which causes considerable confusion. This article is a plea for some agreement on the definition of commonly used terms relating to bilingual education. Educators should adhere to two principles when they refer to bilingual education: (1) indicate whether these terms are used as products or processes, and (2) distinguish between programs and components. The terms listed above usually refer to instructional processes, and the major part of this article defines these processes, which are at the heart of bilingual/bicultural education. (Author/TL)

Many of the deficiencies of bilingual/bicultural programs at present are due to short-sightedness as to the real scope of bilingual/bicultural education. This article expands the scope of some of the current theory and points out reasons for the inefficacy of some bilingual/bicultural programs and suggests methods whereby programs could be improved. The article is organized into the following sections: (1) the international scope of the problem and some background; (2) statistics of civil service exam failure rates, indicating which ethnic groups are the most culturally disadvantaged; (3) a discussion of Asian-American lin-

guistic and social voicelessness, because of their traditionally quiet character and their lack of knowledge of English and of American social skills; (4) typical bilingual/bicultural programs and their inadequacies; (5) children's textbooks from China as good models to use in the education of Asians; (6) some orientation techniques for sensitizing persons involved in cross-cultural education; and (7) some cross-cultural curricular concepts for Asians in America. The overall suggestion is that bilingual/bicultural programs should be more pluralistic in every way. (TL)

Identifiers—\*Great Britain

This selective bibliography lists approximately 100 items dealing with the teaching of English as a native language. The entries include mainly British book publications fairly easily available through booksellers in Great Britain. Periodical literature has been minimally treated. The majority of the items were published between 1969 and 1973, but a few date back to the early 1960's or late 1950's and some even to the 1940's. The list is divided into the following sections: general books and reading, language, talking, writing, poetry, drama, primary schools, and periodicals (TL)

Identifiers—England

This is a preliminary report on a series of small-scale language teaching experiments, aimed primarily at demonstrating that valid research into language teaching methods is possible. Small scale refers not to the number of subjects involved, but to the scope of the experiment. In

stead of looking at a method as a whole (as happens in large-scale global experiments) one limits the area to be investigated, isolating particular variables for study and controlling likely confounding variables. To assess the various methods, two different French grammar topics were presented through the common medium of the language laboratory, at varying levels from first-year university to first-year secondary school in southeast England. Several tapes were made for each topic, all covering the same information, but dealing with it in different ways. The children were divided into groups at random, each child in a particular group using one of the tapes. One group acted as controls. All the subjects were tested on the particular topic before being given the tape, then immediately afterwards, and again ten days later. The results were analyzed statistically, using a computer, to see whether the tapes had had a differential effect on the pupils' achievement and/or attitude scores. (Author)

Identifiers—\*Communicative Competence

The recent tendency in language instruction is toward the functional approach which shifts focus away from structure and internal semantics toward communicative competence and the external uses to which language is put. The implications of this trend for methodology, materials production, educational technology, and in particular for the language laboratory are discussed here. The efficiency of the language laboratory is questioned. The main criticism is that it isolates the learner, thereby excluding visual, kinesic and proxemic information. Also, it has not been proven by any empirical surveys that the language laboratory as it now exists is doing the job it is supposed to. The evidence points towards the abolition of the classroom-laboratory and a corresponding increase in sound libraries and in the diffusion of a variety of audio-visual equipment. It is predicted that the next generation of language laboratories will be "video-laboratories" wherever they can be afforded. But any expenditure on expensive laboratory set-ups should be considered carefully in terms of returns. The switch to the functional approach will result in a move away from artificially constructed programs toward the use of authentic materials. (TL)

Identifiers—Compound Bilinguals, Coordinate Bilinguals, United States (Southwest)

This paper reports on a study done at the University of Texas at San Antonio to examine the extent of compoundness or coordinateness with respect to the language use of Spanish-English speaking bilinguals in the Southwest. The long-range purpose was to delve into the more theoretical issue of the kinds of bilingual func-

tioning. The discussion is divided into the following sections: (1) the compound-coordinate dimension—the history of the study of this concept and the difficulty of defining the distinction between compound bilinguals and coordinate bilinguals; (2) acquisitional and societal patterns—how the place and manner of the acquisition of the two languages affects the degree of compoundness or coordinateness; and (3) description and analysis of the data—the subjects, the instruments used, and the results, which are summarized in tables appended to the report. The experiment suggests that: (1) UTSA Chicanos fall, by and large, into the category of compound bilinguals, (2) their compoundness is a result of a fairly high degree of acculturation into the dominant society, and (3) the diglossic behavior of the older generation is in the process of changing into a more random-bilingual one in the younger generation. Descriptors—College Students, \*Composition (Literary), Language Patterns, Language Research, \*Language Usage, Metaphors, Sex Differences, \*Sex Stereotypes, \*Sociolinguistics, Vocabulary, \*Written Language

This paper describes the preliminary results of research currently underway concerning sex-based differences in written composition. Sixty themes written by college-age native speakers of English were chosen for study. The themes were typed exactly as they had been written. No corrections were made. They were numbered alphabetically by the names of their authors, but the names were not given on the themes. The 60 typed themes were turned over to a panel of 10 college English teachers who read each theme and tried to identify the sex of the writer. Out of the 600 decisions by the panel, 411 were correct. This is significant to a .999 level. The panel indicated reasons for their choices. These reasons were the basis for a formation of criteria for male and female themes. The criteria discussed in this paper are subject matter, word choice, metaphors, perspective, and tone. (Author)

Descriptors—Diachronic Linguistics, \*Grammar, Language Patterns, Language Research, \*Language Usage, \*Sex Discrimination, Sex Role, \*Sex Stereotypes, \*Sociolinguistics, Synchronic Linguistics, Textbooks, Vocabulary

From the beginnings of English grammar in the early sixteenth century, our language has been described by men, and the usage promulgated as the "standard" has been that of men. Because men have been able to effectively control English through their control of the communications media and educational institutions, they have made our language an effective instrument in the continuing oppression of women and the perpetuation of sex-role stereotypes. The effects of male control of English are seen most clearly in the "gender classification system," which most grammarians have described as a system of "natural gender." In fact, however, our nouns are not classified on the basis of "natural" gender, except insofar as it has been defined by men. Aside from a very small number of animate nouns, e.g., "nurse," "secretary," "mother," "prostitute," every other human noun in English is inherently masculine, and carries the semantic feature + male as part of its lexical entry. Modern linguists have simply continued the tradition of male control of language, as evidenced both in their descriptions and in their illustrative examples in textbooks. Neither English nor its grammars have changed much in four centuries. (Author/CLK)

Descriptors—Child Language, \*Language Patterns, \*Language Usage, Role Perception, Self Concept, Sex Differences, Sex Discrimination, \*Sex Role, Sex Stereotypes, Social Development, \*Socialization, Sociocultural Patterns, \*Sociolinguistics

In this paper, the structure and the use of language are postulated as socializing agents influencing sex-role learning in three major ways: (1) sex differences occur in language use and parallel sex-role stereotypes; (2) the language that is addressed to children is usually the language of socialization which instructs the child what to do, think, or feel; (3) the interaction between structure and language usage result in feminine or masculine forms used as generic terms to designate categories that could potentially include members of either sex. This interaction is seen, then, as delimiting androgynous possibilities. The paper attempts to show how these three socializing influences theoretically interrelate with the acquisition of self-concept, sex roles, sex-role stereotypes, and a sexist view of the world in young children. Two tables follow the text, the first giving examples of sex-role stereotyping as expressed by children, and the second giving examples of the nongeneric use of the usually generic masculine form. Descriptors—Employment Opportunities, \*Employment Practices, Equal Opportunities (Jobs), \*Language Planning, \*Language Usage, \*Sex Role, Sex Stereotypes, Socialization, Sociocultural Patterns, Sociolinguistics, \*Vocabulary, Working Women

A significant linguistic shift in the United States is occurring in planned change in the language of sex roles, especially with reference to sexism in employment vocabulary and to gender-based distinctions in occupational designations. Social policy on labor utilization has become increasingly involved in neutering employment vocabulary regarding occupational titles, job classifications, recruitment, and upgrading. Relatively little attention has been given to sexist rhetoric related to work, career choice, opportunity structures, and occupational mobility. The rhetoric for maintaining women as an underclass and for preserving traditional values on sex roles in the labor market has played a powerful part in socialization of both females and males for "keeping women in their place." This socialization in microstructures and macrostructures has involved the use of language and ideology which, starting in early childhood, fosters female learned helplessness and provides many hidden dissuaders to discourage career aspirations, entering occupations, and achieving levels of employment not "traditional" for women. This is a students' programmed text for Level Alpha of a humanistic approach to the instruction of Classical Greek and Greek culture in second-

ry schools. The goals of the program are to help students become aware of: (1) the impact of Hellenic civilization on contemporary society, including the impact of the Greek language on English; (2) the similarities and differences between classical civilization and that of the present; (3) classical allusions in literature and other forms of art; and (4) Classical Greek as a viable form of communication within its cultural milieu. The programmed text is divided into seven units: (1) An Introduction to Greek, (2) The Geography of the Greek World, (3) Everyday Life among the Greeks, (4) The Alphabet, (5) Ancient Crete, (6) Troy, and (7) Greek Gods and Heroes. Each unit consists of a set of frames containing questions. The answers, to be supplied first by the student, are also provided. The units contain cultural, lexical and grammatical material in order of increasing difficulty, and are designed to be used with appropriate tapes. Language is taught by audiolingual methods, according to principles of structural linguistics. (CLK)

This is a bibliography of American doctoral dissertations in linguistics completed between 1965 and 1967. It is an update of Phillip R. Rutherford's "Bibliography of American Doctoral Dissertations," which covered the years 1900-

1964 and was published by the Center for Applied Linguistics in 1968. There are 614 entries in the present bibliography, listed by author and indexed by subject or by language. The entries cover a wide range of topics relevant to linguistics, including descriptive studies; sociolinguistics; computational linguistics; language acquisition; literature and linguistics; studies in phonology, syntax, morphology and semantics; historical linguistics; English as a foreign language; and bilingual-bicultural education. Dissertations in foreign language education, which are to appear in an independent bibliography, have not been included. A bibliography of dissertations covering the period 1968-1974 will be published by the ERIC Clearinghouse on Languages and Linguistics in the spring of 1976. (CLK)

Careers in Foreign Languages: A Handbook. New Edition.

Pub Date 66

Note—241p.

Available from—Regents Publishing Company, Inc., 2 Park Avenue, New York, N.Y. 10016

EDRS Price MF-\$0.76 HC-\$12.05 Plus Postage

Descriptors—Career Education, \*Career Opportunities, Degree Requirements, \*Employment Opportunities, Language Ability, Language Classification, Language Instruction, \*Language Skills, Overseas Employment, Publications, \*Reference Books, Resource Materials, Salaries, Second Language Learning, \*Second Languages

This handbook supplies a variety of general and specific information concerning career in foreign languages for Americans. The main topics include: (1) general recommendations for language study; (2) a sketch of the principal language families of the world, their genealogy and geographical distribution; (3) foreign language courses and degree requirements; (4) aids for independent study of languages; (5) resources for language learning; (6) foreign language proficiency; (7) scholarships, fellowships and loans; (8) the training of the multilingual, including English as a second language; (9) recommendations regarding overseas employment, with specific reference to opportunities in the federal government; (10) opportunities in international organizations; (11) specialized occupations relating to language skills; (12) employment opportunities in trade and business, both foreign and domestic; and (13) employment opportunities with a foreign language as a supplementary skill. The fourteen appendices provide information concerning addresses of agencies involved in the foreign language field; salaries of government and public school employees; journals, foreign language publications and audiovisual aids, including distributors and publishers; colleges maintaining language houses; directories of state foreign language newsletters and language supervisors; a list of professional organizations; and suggestions for further reading, including directories and general reference books, publications of federal agencies and departments, and publications relating to language careers. Descriptors—Adult Education, \*Career Education, \*Career Planning, College Language Programs, Curriculum Development, \*Employment Opportunities, Job Skills, \*Language Instruction, Language Skills, School Community Programs, \*Second Language Learning, Second Languages

This article discusses the career approach in foreign language instruction, and defines three dimensions for this approach: (1) information, that is, current data about actual jobs requiring language skills, (2) public awareness, and (3) curriculum, that is, providing courses that meet the needs of a career-oriented approach. These three dimensions lead necessarily to activity in other fields, specifically (1) information gathering; (2) bringing information about languages and jobs to the attention of the public, including students, parents, counselors, school administrators

and members of the business community; and (3) curriculum development. Due to declining enrollments and changing student attitudes and needs, foreign language departments need to redefine their goals with a realistic approach to the place of language skills in actual career planning. With this approach, language needs to be offered not as a primary skill but rather as an auxiliary or supportive one. Materials appropriate for career-oriented language courses are needed, and the career approach will also undoubtedly affect teacher training. In addition, interaction between the school and the community is needed, partially in the form of adult language programs, a few of which are described here. (CLK)

This annotated bibliography is the product of a West German information dissemination system that is similar to ERIC. The bibliography is published quarterly and lists items compiled in conjunction with the ERIC Clearinghouse on Languages and Linguistics as well as with a number of institutions all over the world. Most of the 245 items in this issue appeared in 1975 and some in 1974. The items deal primarily with modern language instruction, but also with several other areas of applied linguistics. The publication is composed of three main sections: (1) an alphabetical author/title listing of items, including full bibliographic citations and subject index terms; (2) abstracts of the items; and (3) a subject index developed from the descriptor terms assigned to each entry. These three main sections are preceded by lists of journals and institutions cited and followed by an alphabetical author/title to entry number cross-reference index. (TL)

Descriptors—Biculturalism, \*Bilingual Education, \*Bilingualism, \*Bilingual Students, Bilingual Teachers, Community Involvement, Curriculum Development, Educational History, \*Educational Legislation, \*English (Second Language), Language Instruction, Language Proficiency, Material Development, Teacher Qualifications

Identifiers—\*Bilingual Education Act

State after state is wrestling with federal legislation's mandate to respond to the needs of students whose native language is not English. Much ambiguity, confusion, and frustration surrounds the issue of bilingual-bicultural education. This paper begins by describing the confusion which often surrounds the English component in a bilingual program, and then reviews the historical development of bilingual education in the United States. Within this context, aspects and implications of the Bilingual Education Act are discussed. Definitions of key terms are then presented, followed by a discussion of the fundamental question of whether the child's mother tongue should function solely as a "bridge" to English or whether a systematic attempt should be made to maintain and develop linguistic and cultural differences between the child's native language and the target language. Specific

problems related to bilingual-bicultural education are then discussed in some detail. Some of these include the qualifications of bilingual-bicultural teachers, the development and implementation of a bilingual curriculum, the development of bilingual-bicultural materials, the identification of bilingual children and/or the assessment of language dominance. Finally, the importance of community involvement in bilingual-bicultural programs is discussed. (Author/TL)

The Effects of Learning English as a Second Language on the Acquisition of a New Phonemic Contrast.

Pub Date 75

Note—19p.; Revised version of a paper delivered at meeting of the Acoustical Society of America (Austin, Texas, April 1975)

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—Articulation (Speech), Auditory Discrimination, Bantu Languages, Consonants, Contrastive Linguistics, Descriptive Linguistics, \*Distinctive Features, \*English (Second Language), Language Research, Phonemes, Phonemics, \*Phonetic Analysis, Phonetics, Phonological Units, \*Phonology, \*Second Language Learning, Vowels

Identifiers—\*Categorical Perception, Kikuyu

Very sharp discrimination functions for the timing of voice onset relative to stop release characterize perceptual boundaries between certain pairs of stop consonants for adult speakers of many languages. To explore how these discriminations depend on experience, their development was studied among Kikuyu children, whose native language contains no stops in which voicing is substantially delayed relative to stop release (e.g., /p/). Kikuyu distinguishes stops in which voice onset substantially precedes release (prevoiced) from those in which voice onset is nearly simultaneous with release (voiced) for apical and velar places of articulation. However, the language has only a single prevoiced labial stop. Prior to exposure to English, children discriminated prevoiced from voiced labials and voiced from voiceless labials, although these distinctions are not phonemic in Kikuyu. Moreover, the voiced/voiceless discrimination for labials ([ba]) versus [pa]) improved markedly with schooling in English, rapidly surpassing the prevoiced/voiced distinction. Apparently, certain voice onset time differences are naturally discriminable, but it is also apparent that the very fine voiced/voiceless discrimination among adults for whom it is phonemic is largely attributable to experience. Bouma, Lowell

On Teaching the History of German as Applied Linguistics.

Pub Date 29 Nov 75

Note—7p.; Paper presented at a meeting of the American Association of Teachers of German (Washington, D.C., November 29, 1975)

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—Applied Linguistics, Case (Grammar), College Language Programs, Contrastive Linguistics, \*Course Content, \*Diachronic Linguistics, English, \*German, Grammar, Higher Education, \*Language Instruction, Morphology (Languages), Phonology, Second Language Learning, Syntax, \*Teaching Methods

In teaching a course on the history of the German language, it is preferable to use the linguistic approach, which deals with the structure of language and those linguistic events which characterize the development of contemporary German from Proto-Indo-European, rather than the cultural approach, with emphasis on extralinguistic data. The main arguments in favor of this viewpoint are: (1) in most German major or graduate programs the students will have little other opportunity to experience a linguistics course and should therefore be given as heavy a dose of linguistics as possible; and (2) the cultural aspects of the history of German can be picked up much more easily by the students as an adjunct to their other classes, or on their own. Such language history courses should also give attention to contrasting German and English. The students taking such courses will be mostly Americans who plan to teach German in America. Knowledge of the historical bases for irregularities in German and of the main linguistic features which distinguish it

from English should make language teaching easier for them. Many examples are given from phonology and some from grammar where such knowledge would be useful in explaining language phenomena. (Author/TL)

As part of the Goals Clarification topic of the 1975 Northeast Conference, a workshop entitled "The Non-Major Foreign Language Student" was presented. This article contains the workshop's most salient ideas, presented at a time when foreign-language study is in considerable jeopardy at all levels. Offerings are being limited, and highly qualified teachers are losing their positions. There are fewer students in most colleges and public schools. The mid-seventies represents a "students' market." In light of this situation, the following article suggests specific programs to help remedy our plight. The reader will find a number of suggestions for revamping the major. Courses are proposed for attracting students from the academic community as well as from the community at large. There are proposals for special courses to maintain language skills, to appeal to students' immediate needs and interests, and to provide career preparation. (Author)

FL 101: A Cultural Introduction to Foreign Languages.

Pub Date 6 Nov 75

Note—10p.; Paper presented at the Annual Meeting of the South Atlantic Modern Language Association (Atlanta, Georgia, November 1975)

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—Aesthetic Education, Area Studies, \*College Language Programs, Comparative Analysis, \*Course Descriptions, \*Cultural Background, \*Interdisciplinary Approach, Language, \*Language Instruction, Modern Language Curriculum, Second Language Learning, Team Teaching, Writing

FL-101 is an interdisciplinary, team-taught orientation to foreign languages. It has been designed to accomplish two goals: (1) provide a language-related academic experience for students who would otherwise not have any contact with languages, and (2) attract students to the further study of language. There are nine major components in the course: (1) geography and language; (2) the origins of language and the evolution of dialects; (3) the deep culture of language; (4) the similarity of the Indo-European languages and the differences in the Chinese and Japanese grammatical and writing systems; (5) the analysis and demonstration of sample dialogs in French, Spanish, German, and Russian; (6) the "international" language of science; (7) the genius of literature (sample readings); (8) the arts and language: a survey of music or opera or art or the film in foreign cultures; and (9) beyond language: computer languages, codes and codebreaking, the language of symbols and signs. All four languages taught at Murray State University are represented, and additional lectures are given by the departments of Philosophy, Psychology, Sociology, Anthropology, Art, Music, and English. The university plans to write a textbook and possibly will co-sponsor two summer workshops in the teaching of the course. (Author/KM)

A Bibliography of Empirical Investigations of Certain Aspects of Foreign Language Teaching and Learning, 1925-1975.

Pub Date 75

Note—67p.

EDRS Price MF-\$0.76 HC-\$3.32 Plus Postage

Descriptors—Academic Achievement, \*Bibliographies, Bilingual Education, Bilingualism, Educational Equipment, \*Educational Research, Error Patterns, Fles, Individual Differences, Instructional Materials, Instructional Media, Interference (Language Learning), \*Language Instruction, Language Proficiency, \*Language Research, Language Skills, Language Tests, Psycholinguistics, \*Second Language Learning, Student Attitudes, Teaching Methods, Transfer of Training, Vocabulary Development

This 647-item bibliography is limited to reports on empirical research and discussions of research reports on various aspects of foreign language learning, mostly drawn from American and British journals and Ph.D. dissertations since 1925 and from ERIC documents. Principal topics include content of teaching materials, cognitive effects of bilingualism, measurement of bilingual proficiency, psychological studies of bilinguals, relationships between various language skills, the psycholinguistics of second language learning, transfer and interference, error analysis, vocabulary learning, bilingual education, foreign languages in the elementary schools, individual differences in language learning success, prognosis, teaching methods, equipment, media, testing, language difficulty, and effects of language learning on attitudes, cognition and grades in other courses. The arrangement of topics is similar to that in the ACTFL Annual Bibliography. Cross-references and an author index are included. (Author/KM)

Familiarization with the thoughts and creations of great minds, past and present, is a significant function of education. Many students, however, are effectively denied such opportunity for intellectual growth by the identification of education with job-training. Much of the curriculum neglects the past and the foreign. Humanists approach this problem not by reforming humanities curricula per se but by proposing "bridges" between the humanities and vocational interests. There is a great need for individual humanities courses that are not introductions to further work in a particular discipline. The "arguments" for persuading students to study the humanities have changed little in this century; these are categorized as (1) the traditional, (2) the exemplary, and (3) the pragmatic. All are persuasive, but none offers absolute proof of the benefits of such education. The methods of the sciences and social sciences should be applied to furnish that proof. In addition, it should be possible to popularize the content of the humanities without vulgarizing or diluting it. Everyone beyond infancy has skills and knowledge of a humanistic kind. There are hopeful signs of a resurgence of interest in humanities education. Humanists must choose now whether to harness this interest to their own purposes or to decry it as a dilution of their discipline. (Author/KM)

A Bibliographical Introduction to Sentence-Combining.

Pub Date 74

Note—20p.

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—\*Annotated Bibliographies, Composition (Literary), \*English (Second Language), \*English Instruction, Grammar, Language Development, Language Instruction, Language Skills, Second Language Learning, Sentences, \*Sentence Structure, \*Syntax, Transformations (Language)

**Identifiers—\*Sentence Combining**

This is an annotated bibliography intended to provide, for teachers of English, enough information about research and experimentation in sentence-combining to enable them to begin to use it as a pedagogical technique with some understanding of the theories and issues involved. The annotations are selective in that they summarize the information judged most useable by the classroom teacher, though some information about research designs is also summarized. Those who work out uses of the technique for their own classes should eventually examine all these sources for themselves, but in the meanwhile, this bibliography, it is hoped, can get them started on their own applications of the technique. **Identifiers—\*Critical Pairs**

This paper describes and gives the results of a psycholinguistic experiment investigating the impact of certain surface syntactic structures on the perception and memory of language. The basic assumption is that the content of an utterance must be its most salient aspect in memory. The for of an utterance, its surface grammar and phonology, must have some salience for memory, especially short-term, but nothing like that of content. Any meaningful grammatical distinctions of markers should, therefore, be more salient in memory than meaningless ones. This experiment focuses exclusively on different varieties of one surface distinction: sentences whose underlying predicate surfaces as a verb versus those where the same predicate surfaces as some nominalization of that verb. The experiment consisted of administering to the subjects pairs of synonymous sentences, differing in the above manner and referred to as Critical Pairs (CP's), and five other types of sentences, included for comparing recognition performance on CP's to performance on other kinds of linguistic memory. The conclusion is that the surface syntactic differences manipulated here have little, if any, salience for memory, and that it is unlikely for such surface differences to have any semantic consequence. Such conclusions, however, do not necessarily generalize to other surface features. (Author/TL)

There can be little doubt of the special importance of computers to the operation of collegiate registrar and admissions offices. The American Association of Collegiate Registrars

and Admissions Officers (AACRAO) conducted this survey for the purpose of identifying and interpreting trends in the use of computers in registrar and admissions activities. This survey serves to update the status of events reported in the 1966-67 survey and to broaden the base of inquiry. Specifically, the intent of the survey was to seek answers to questions regarding (1) the trend in utilization of computers; (2) the kinds of computer equipment being utilized; (3) how they are being used; and (4) the patterns and problems of management associated with use of computers. The survey was conducted by means of a questionnaire administered to 1646 AACRAO member institutions in November 1969; responses were received from 1477 institutions. Significant trends in the use of computers are outlined. (JMF)

**Descriptors—**Campuses, \*Campus Planning, \*Higher Education, Motor Vehicles, \*Student Transportation, Transportation, \*Trend Analysis, \*Vehicular Traffic

**Identifiers—\*California**

A thorough study of changing student transportation patterns is justified on the grounds that (1) campuses are major traffic generators; (2) there is increased concern over the need to develop transportation systems that pose less ecological threat to the urban environment; (3) transportation patterns of students, faculty, and staff are changing and planning for the future requires an analysis of the changes. This study analyzes all significant changes in student transportation patterns at the University of California during the period 1965-66 to 1971-72. The study was initiated in 1972 when the number of bicyclists appeared to be rapidly increasing at several of the nine University campuses. The campuses were classified by their dominant student transportation orientation: pedestrian (San Francisco and Berkeley); bicycling (Davis and Santa Barbara); automobile (Irvine, Los Angeles, Riverside, and San Diego); and auto-public transportation (Santa Cruz). The factors shaping student transportation patterns are discussed including proximity and concentration of student housing; availability and quality of alternative transportation modes; scale and intensity of environs development; topography of campus and environs; and campus and community transportation policies. **Identifiers—**\*Endowments, Ford Foundation, Total Return

In 1969, in a report to The Ford Foundation entitled "The Law and the Lore of Endowment Funds," William L. Cary and Craig B. Bright summarized the results of an extensive survey of the law governing college and university endowment funds. The key conclusion of the report is that "there is no substantial authority under existing law to support the widely held view that the realized gains of endowment funds of educational institutions must be treated as principal." This was critiqued by Thomas E. Blackwell and Ralph S. Johns (NACUBO Professional File, May 1970). The first article in this publication by Cary and Bright is a reply to the critique and deals primarily with the legal aspects of endowment funds and particularly with the question of whether capital gains on investments should be treated as principal or as income. The second article, by John F. Meck, is also a comment on the Blackwell-Johns article and presents the author's thoughts on the investment considerations involved, especially as they relate to the concept of total return. (JMF)

Management by Objectives (MBO) can be used as a tool for assisting in the more effective management of organizations engaged in higher education. This document shares the early experiences and efforts of those who have implemented the MBO process in higher educational environments with individuals and organizations who may be contemplating the introduction of MBO. The presentation addresses MBO in three different ways. (1) The opening chapter provides the general theory and research-based underpinnings of the MBO concept and identifies the fundamental assumptions, ideas, and issues underlying the use of MBO. In addition to basic background, this section highlights several of the major difficulties sometimes associated with MBO and identifies strategies that can be used to meet these difficulties as educators try to implement MBO. (2) Case discussions by several educators were commissioned for this publication. These cases represent a variety of higher educational settings: a community junior college, a church-related liberal arts college, a department within a major university, a large state university system, and a leading medical-educational complex. (3) The final chapter describes a research and development program. (Author/KE)

Descriptors—College Curriculum, College Faculty, Curriculum, \*Curriculum Research, \*Educational Researchers, \*Higher Education, \*Individual Characteristics, Questionnaires, Researchers, Research Needs, Research Utilization, Small Schools, State Colleges

The objective of this study was to identify characteristics of researchers and small, undergraduate colleges supportive of curriculum research. A questionnaire, designed to determine professional characteristics of the respondents, and environmental, and organizational factors supportive of curriculum research was mailed to the total faculty of four colleges, and the responses analyzed. In addition, other, similar studies were reviewed and the results compared with the present study. Curriculum researchers reported a higher incidence of: doctorates; senior faculty

positions; heavier teaching loads; administrative responsibilities; degree of outside professional activities; research training; departmental research committees and student research programs; established college relationships with other institutions; availability of a centralized research office; and awareness. All respondents: ranked curriculum research low for curriculum improvement; reported similar motivators; and ranked individual faculty, departmental chairmen, and the presidents highest for favorable attitudes toward research. Results of similar studies were generally consistent with the results of this study. (Author)

Descriptors—Data Collection, \*Decision Making, \*Educational Objectives, Educational Planning, Educational Responsibility, \*Evaluation Methods, Evaluation Needs, \*Higher Education, Institutional Research, Leadership Responsibility, \*Program Development

This document defines a wide range of measures of the outcomes (results or impacts) of postsecondary education institutions and their programs and suggests procedures for acquiring

the data needed for each measure. The outcome measures described are ones identified by a survey of institutional and state-level decision makers as providing the information most needed about the impacts of postsecondary education. The procedures presented are suggested methods for collection of data on each particular outcome measure, often with several alternatives suggested. The procedures are not all-inclusive, but rather are designed to suggest a starting point for institutions wishing to collect the data. Most procedures are relatively straight-forward, relying primarily on two methods of data collection: (1) a questionnaire administered to those receiving the benefits of postsecondary education or to those who can determine how many persons received certain benefits, and (2) searches of institutional records. The manual has been designed so that each outcome measure and its associated data collection procedures are presented separately. (Author/JMF)

"Challenges of the Presidency" explores the circumstances and forces that affect the college president's leadership in identifying and accomplishing the educational mission of the institution. These four papers examine the external forces of government and population trends as well as the internal pressures from faculty and students, and offer different perspectives on the actions to be taken and the expected outcomes. Issues dealt with are: (1) maintenance of quality education in the face of declining enrollments, decreasing public support to higher education, faculty cuts, and weakening student commitment to education; (2) institutional efficiency in state systems; (3) centralization, financing, and enrollments as challenges to the presidency; and (4) definitions of an institution, institutional effectiveness, and institutional evaluation. Descriptors—\*Comparative Statistics, Ethnic Groups, Family Income, Grades (Scholastic), \*Graduation, \*Higher Education, Minority Groups, \*Open Enrollment, \*School Holding Power

Identifiers—\*City University of New York, CUNY

This document concerns the retention and graduation of students at the City University of New York. Major attention is devoted to those who entered the senior and community colleges of CUNY as first-time freshmen in September 1970. This group was the first to enroll in the university under the open admissions policy. This report includes the group status (enrolled or not, graduate or not) after eight semesters, and data on retention and graduation. First, findings are presented for men and women and by students' area of residence, as well as for high school average categories. Second, data on freshman class entering CUNY each fall since 1970 is used to compare the retention of the first open admission students with subsequent enrollees. Last, some comparative statistics on graduation are presented including: data for a CUNY sample prior to open admission, data from a national sample of college students, and data from a selected group of two-year and four-year colleges. Descriptors—Economic Climate, \*Educational Finance, Federal Government, \*Higher Education, \*Private Colleges, State Action, \*State Colleges, \*State Universities

The importance of private initiative has long been recognized in tax exemption by federal, state, and local governments. One outcome of this history is the dual system of higher education—a system that is partly private and partly public. Despite the important service rendered by the private sector, it is today facing a bleak financial future. Meanwhile dozens of new public institutions and new campuses of old ones have been established, new educational programs have been started in the public sector, and the general quality of public institutions has been raised. These changes have still further weakened the competitive position of the private sector. It is clear that if the present trends continue, many if not most private colleges will be in trouble. The nation clearly faces the decision: Does it wish to maintain the dual system of higher education or not? The point of view that seems to be emerging among educators of both the public and private sectors is the emerging division of labor between the states and the Federal Government. The states will continue to have major responsibility for institutions and some responsibility for student aid. The Federal Government will have a supplementary and supportive role with emphasis on student aid, incentive programs to encourage state action, and categorical grants for research and graduate and professional study. The hope is for a plural or diverse system, including a healthy, private sector, within which there will be competition and also complementarity. (Author/KE)

Descriptors—\*Equal Education, Federal Programs, \*Financial Support, \*Higher Education, Public Policy, \*Student Costs, \*Tuition

The low tuition system has worked so well for so long that it should not be abandoned on the basis of very limited data and even more limited assumptions. The rights of millions of college students to a low tuition education should not be

bargained away in the name of some notion of "higher educational consensus" or "healthy dialogue." Nor should this right be bargained away in the name of aid to low income students or in the name of student choice. An emphasis on student aid alone, without adequate institutional aid, can force a general increase in tuition that will disadvantage all students—working class and middle-class as well as poor. There is a substantial and growing body of research that finds increases in tuition and other college costs lead to decreases in enrollment. Indeed, such tuition increases are one principal reason why the percentage of high school graduates going to college has been declining for several years. Congress and the administration should include a set-aside of funds for education and training to enable some of the unemployed to develop new skills for later employment. (Author/KE)

Developmental Models for Accountability in Undergraduate Social Work Education.

Pub Date [74]

Note—22p.

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

Descriptors—\*Educational Accountability, Evaluation Methods, \*Higher Education, \*Instructional Systems, Job Skills, \*Models, Professional Education, \*Social Work

In an attempt to establish an empirical criterion base from which viable and valid decisions can be made regarding "what makes a good social worker" and "how do we know when we have a 'good' social worker," a criterion mastery learning base is proposed which addresses itself to the change agent role of the social worker. Developed is a model which consists of three conceptual areas: environmental influences, social work skills, and supportive skills, joined by feedback of evaluative information. Each of these areas is independent in the accountability model for social work education. Fourteen construction areas can be refined into a number of elements, modules, or capsules of instruction. The focus is on the latter two conceptual areas, social work skills and supportive skills. Accountability in social work education is not an alternative but a societal demand. The worth of this model will only be determined by its implementation in the real world. Its degree of success may provide valuable information for change in social work education. (Author/KE)

Two Planning Studies on Open Learning.

University Consultants, Inc., Cambridge, Mass.

Spons Agency—Massachusetts State Coll. System, Boston.

Pub Date Jan 74

Note—150p.

**EDRS Price MF-\$0.76 HC-\$6.97 Plus Postage**

Descriptors—Adult Students, Continuation Students, Exceptional Students, \*Open Education, Part Time Students, \*Post Secondary Education, \*State Programs, \*Student Characteristics, \*Student Needs

Identifiers—Massachusetts

This analysis of current and future programs of the Massachusetts State College System examines the potential relationship between the Massachusetts State College System and the providers of Postsecondary Education other than degree-granting colleges and universities that might be established through the Massachusetts Open University, and identifies the special clientele groups that might be serviced by the Massachusetts State College System in cooperation with the proposed Massachusetts Open University. It was found that the open learning network should recognize and legitimize educational activities in non-degree-granting institutions and programs by providing means of certifying some of the existing programs for credit and of examining graduates of other institutions for competency. The target clientele is arranged into three general groups—disadvantaged, "second chance," and those already making use of the existing continuing education system. Discussed are group characteristics and needed services. Also discussed are financial structures for the open learning network and possible means of providing them, including aid to students, institutions, and target groups. (Author/KE)

The Federal Budget Outlook and Its Implications for Higher Education.

Pub Date 10 Jan 75

Note—10p.

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

Descriptors—Budgeting, Cost Effectiveness, \*Economic Climate, \*Economic Factors, Expenditures, \*Federal Legislation, \*Post Secondary Education, \*Taxes

Given the need for a large stimulus by the federal government in the short-run and given the need for structural reform on our budgeting and taxing process over the long-run, what is likely to happen to federal expenditures for higher education? Two issues likely to arise are: (1) in this next year there is absolutely no excuse for holding back new higher education programs or fuller-funding of old programs because of "inflation"; and (2) if tax cuts are to be used to bring the economy out of the doldrums, the tax changes should be (primarily) temporary ones. During the recovery, the prerequisites for a sensible tax-and-budgeting process should be put in place. How the government decides the big issues of short-term economic stimulus and long-term budget reform more than anything else will determine the fate of federal aid to postsecondary education. Optimizing Learning Through Effective Management.

Central Michigan Univ., Mount Pleasant. Inst. for Personal and Career Development.

Pub Date [74]

Note—14p.

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

Descriptors—\*Adult Learning, Behavioral Objectives, Feedback, \*Higher Education, Instructional Design, \*Instructional Innovation, Instructional Materials, \*Instructional Programs, Knowledge Level, \*Learning Experience, Learning Readiness, Management

A model of an instructional program which uses principles of effective management to optimize learning for adult learners is described. The model is a result of the authors' work with the Institute for Personal and Career Development which is responsible for the external degree program of Central Michigan University. Most adult learners have limited time available to attend class meetings; however, this time factor becomes far less crucial and learning and instruction can be efficient and effective if these individuals can acquire the basic concepts and principles of the course prior to the group sessions. For this purpose learning packages and various

mediated materials are used which include diagnosis of pre-instructional knowledge, behavioral objectives, self-pacing and self-diagnostic tests with immediate feedback. Intensive schedules are used for class sessions at which time the professor can assist the students to apply, synthesize, and evaluate the concepts and principles learned prior to class and to develop new principles from them. The professor develops the hierarchy of objectives and acts as the resource person. The student gains additional insight by assuming greater responsibility for an enriching learning experience. Leitner, Dennis W. Sedlacek, William E. Characteristics of Successful Campus Police Officers. Research Report No. 10-74.

Maryland Univ., College Park. Counseling Center.

Report No.—RR-10-74

Pub Date [74]

Note—11p.

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

Descriptors—\*Attitudes, Attitude Tests, \*Behavior, Campuses, \*Higher Education, \*Individual Characteristics, Personality Tests, \*Police, Predictive Ability (Testing), Psychological Characteristics, Racial Attitudes, Self Concept Tests, Statistical Surveys

Fifty-two University of Maryland, College Park campus police officers were administered the Personal History Index, the California Psychological Inventory, the Press Test, the Test of Social Insight, the Situational Attitude Scale, the Dogmatism Scale, and the California F scale. These predictors were related to the following performance criteria, using step-wise multiple regression and Pearson correlation at the .05 level: tenure, most commendations, most reprimands, most absenteeism, "ideal" officer, most promotions, highest peer rating, highest self-rating, and highest supervisor rating. Results indicated that statistically significant predictions were possible on all criteria, but that each criterion was associated with different, sometimes opposite characteristics. For instance, those with the highest peer ratings tended to be authoritarian, while those with the most commendations were not. Other findings included negative racial attitudes being associated with most commendations, "ideal" officer, most promotions, and highest supervisor ratings. Potential explanations and implications of these and other results are discussed. Ultimately a decision on the performance characteristics considered most important must be made so that officers meeting those requirements can be selected. (Author)

What Do Admissions Officers Read? Sources of Information for Professional Development and Effectiveness.

Pub Date Oct 75

Note—41p.; Paper presented at the Annual Meeting of the National Association of College Admissions Counselors (Atlanta, Georgia, October 8, 1975)

**EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage**

Descriptors—\*Admissions Counselors, \*Higher Education, \*Information Needs, \*Information Sources, Information Utilization, \*Periodicals, Professional Personnel, Professional Training, Questionnaires

This pilot study was conducted to determine the sources of information utilized by admissions officers to enhance professional growth and to help in current professional responsibilities. In an attempt to analyze the verbal ability of admissions officers a survey was conducted among admissions officers to determine: (1) what they read, (2) how much they read, (3) how important are the professional journals, (4) what departments in journals are read most quickly and thoroughly, and (5) who writes for the journals. The survey, a five page questionnaire, was mailed to heads of admissions offices in 179 public and private colleges and universities located in New York and Pennsylvania. Fifty-nine responses, 33 percent, were returned. In addition 15 leading educational journals were surveyed about their readership and comparison was made between the admissions officers' responses and the journal responses. (JMF)

Descriptors—Fees, \*Graduate Students, \*Higher Education, Private Schools, Public Schools, Residence Requirements, \*Statistical Data, \*Student Costs, Tables (Data), Tuition, \*Undergraduate Students

This publication presents data from the seventh and eighth Higher Education General Information Survey (HEGIS) showing typical or modal charges to students in institutions of higher education for the academic years 1972-73 and 1973-74. Analytic tables provide detail for public and private institutions, with comparison to typical charges to in-state and out-of-state students for tuition and required fees. These tables permit comparisons of undergraduate and graduate tuition and fees by level, control, and enrollment size of institution. Charges for room and charges for board, in public and in private institutions, are shown in separate tables with no differentiation as to students' level of study or residence status. Tables presenting data for individual institutional reporting units and tables and charts on the distribution of basic student charges show the actual charges as they were reported to the National Center for Educational Statistics. All other Tables, presenting summaries by type of institution or by state, utilize weighted averages which were computed on the basis of full-time-equivalent enrollment. The tables are grouped by year and the charges reported are those that were required of the largest proportion of full-time students at the undergraduate and graduate levels for the academic year reported. Not included are costs for books and supplies, athletic and social activities, and off-campus living costs. (JMF)

Examples of the Use of National and State Postsecondary Education Financing Models.

Systems Research Inc., Los Angeles, Calif.

Pub Date 75

Note—37p.; Paper presented at the National Conference on Postsecondary Financing (Washington, D.C., January 1975)

**EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage**

Descriptors—\*Educational Finance, \*Enrollment, Income, \*Models, \*Post Secondary Education, \*Student Costs, Systems Analysis, Systems Approach, Tuition

The National Commission on the Financing of Post Secondary Education (NCFPE) has developed a model of student response to alternative financing plans, and has used this computer model to evaluate several alternatives in terms of enrollments and costs. The model predicted enrollments by types of institutions and family income and costs based on the changes in "price response"—the changes in the number of students who attend an institution based on its tuition,

fees, and other costs. Thus enrollment would be expected to increase if the costs to the student-price were lowered and enrollment would be expected to decrease if the costs to the student price were increased. Two models were developed from the NCFPE model. This document provides the results of using those models with several alternatives interpretations of the general policy of "low tuition." While the results can themselves be useful to the discussion of alternative financing plans, they are intended as an example of using these improved models at two levels of interest. These models, like many others, depend on the student's response to the change in the "price" of postsecondary education. A brief summary of this concept and data bearing on this issue are included as an appendix. (Author/KE)

Descriptors—\*Consumer Protection, \*Data Analysis, Data Processing, Federal Programs, \*Higher Education, Information Seeking, \*Information Utilization, \*Post Secondary Education

Postsecondary student aid programs administered by the United States Office of Education (USOE) have helped many thousands of students to obtain an education they may not otherwise have received; however, some schools have engaged in questionable or abusive practices that have frustrated student attainment of the desirable educational goals envisioned by the Congress in establishing these programs. To curtail these practices the American Institutes for Research (AIR) was contracted to develop and field test a data capture and dissemination system that would provide information for improved consumer protection in postsecondary education. Chapters cover: (1) regulatory and nonregulatory approaches to consumer protection, (2) the role of the AIR project, (3) consumer protection data, (4) project instruments, (5) field test data analysis, (6) development of dissemination and use strategies, and (7) limitations. Descriptors—\*College Graduates, Educational Planning, \*Educational Supply, \*Employment Projections, \*Higher Education, \*Labor Demands, Regional Planning, Trend Analysis, Units of Study (Subject Fields)

Identifiers—\*United States (South)  
Few manpower projects in Southern states have focused on the demand for the output of four-year colleges and universities. Even fewer have attempted to link projections of demand for degree programs to the supply of graduates generated by those programs. Moreover, none have set the state outlook for a particular college-trained skill within a context of the supply-demand balance picture for neighboring states and the South in the aggregate. From a career guidance perspective, if not in an educational planning context, such a comprehensive evaluation is required. It is the intent of this document to present preliminary state-by-state projections of supply-demand balances for a limited selection of degree specialties in the context of similar projections for the Southern region as a whole

developed under the same general methods. The projections of degrees by level, by state, and by field of study are based on the region's share of U.S. degrees according to projections by the U.S. Office of Education (USOE), and the historical distribution of degrees in the region by degree levels relative to the U.S. historical distribution. All graduates at all degree levels have been classified into 20 major fields of study. Generally the data reflected limited opportunities for Southern college graduates in the traditional field of work (conventional projection) but show openings in the extended list of occupations (comprehensive projection) to be more likely during the 1970's. Identifiers—\*Sweden

This document, adapted to readers who are not familiar with institutional details in Swedish higher education, outlines planning and management at regional and central levels. Emphasis is placed on qualitative aspects of planning and on identification of obstacles and possibilities of change and innovation. A central problem for the study is to suggest methods of how overarching societal (political) goals for higher education could be attended to, together with local and regional freedom and a local and regional planning that is effective and innovative. Another main focus is to study how changes in organization and decision-making can promote desired educational development such as problem-orientation, interdisciplinarity, international education, course development to meet demands for new student categories, and new teaching methods, such as project groups. It is based on talks with 250 individuals within the university and professional schools, on literature and documents, and on seminars and discussions within a limited circle of persons. In conclusion, it seems that present bad habits in organization, planning, and management develop because analysis of the real problems is neglected and inefficient methods are used to tackle problems that are not clarified. Because of the importance of reliable information regarding transfer students for regional and system-wide planning, and interinstitutional cooperation, the data gathered for this study have been organized and presented in a variety of formats designed to provide immediate answers to a wide range of questions that may be formulated regarding transfer students. The basic data are presented so as to directly relate the transfer students. The basic data are presented so as to directly relate the transfer student's prior institution and current SUNY institution and entry level. This information is provided for individual institutions, institution types, and institutions by coordinating area. Additional information is provided regarding trends in transfer students, relationship of the associate degree to transfers, admission success of transfer students, and other related information. A brief summary of some selected aspects of transfer student mobility expressed as percentages of all transfer students follows: (1) 58.0 percent from a SUNY institution to a SUNY institution; (2) 40.4 percent from a non-SUNY institution to a SUNY institution; (3) 1.6 percent previous institution unknown; (4) 63.9 percent from all sources to a SUNY senior

institution; (5) 36.1 percent from all sources to a SUNY two-year institution. (Author/KE)

Identifiers—\*Maryland

This document analyzes the major elements of Maryland school and college law pertaining to governance. While recognizing differences between school and college law in Maryland, this study shows that there are many elements in common between the two. This study will be primarily concerned with civil law rather than criminal law. School personnel or students who violate criminal laws face the same procedures and problems as do those citizens who are not

connected with a school system or an institution of higher learning. While this study does not intend to make lawyers of laymen, it does propose to aid citizens in understanding basic provisions and concepts of Maryland school and college law. It aims to show a relationship between school and college law to help bridge a gulf between the elementary and secondary levels and the collegiate level. Examined is the Maryland school and college law in its historical perspective and authorities and functions of state and local boards. (Author/KE)

Descriptors—Academic Rank (Professional), \*Higher Education, \*Medical Education, \*Performance Factors, \*Post Doctoral Education, \*Professional Continuing Education, Research, Tables (Data)

The research methodology developed in this paper was intended to shed some light on the question of career performance differentials within academic medicine between persons who have undergone postdoctoral training and those who have not. Compared were two groups of

medical school faculty members (including M. D.'s and Ph.D.'s). One group included those who completed postdoctoral work before 1968. The second group was composed of those with no post doctoral support. The two groups of faculty members were compared on the following indicators of academic performance: (1) academic rank in 1972; (2) research orientation of the employing medical school in 1972; (3) research responsibility in 1972; (4) participation in NIH training grants in 1972; and (5) participation in other federal research programs in 1972. The M. D. postdoctorals outscored the M. D. nonpostdoctorals on all four performance criteria. The score differences were found to be statistically significant for all but the second criterion. An analysis of Ph. D.'s in academic medicine found roughly twice as many M. D.'s in academic medicine as there are Ph.D.'s. The Ph.D. postdoctorals outscored the Ph.D. nonpostdoctorals on all academic performance criteria, but only two of these differences were statistically significant. Although it is not possible to conclude that exposure to postdoctoral training results in better career performance in academic medicine, it is certainly not possible to reject that notion. Descriptors—Academic Rank (Professional), Age, \*Employment Patterns, \*Faculty Mobility, Geographic Location, \*Higher Education, \*Medical Education, School Environment, Sex (Characteristics), \*Teacher Characteristics, Training

Even though each medical school has its own unique qualities that distinguish it from another, differences can be examined in terms of faculty and school characteristics. Two general questions are pursued in the present report: (1) What are the mobility patterns of medical school faculty members as revealed through an analysis of faculty characteristics? (2) What are the mobility patterns of medical school faculty members as revealed through an analysis of institutional characteristics? To answer these questions medical school faculty are divided into four groups—new hires; transfers; stayers; and leavers—on the basis of mobility status. Medical school faculty in the four mobility status groups are then compared in terms of the following characteristics: age, sex, country of training, academic rank, nature of employment. Also included are two characteristics of the medical schools—ownership and age. (Author/KE)

Descriptors—Employment Patterns, \*Faculty Mobility, \*Higher Education, \*Institutional Environment, \*Medical Schools, Salaries, School Holding Power, \*Teacher Characteristics

The retention of qualified faculty is an important factor in maintaining the identity and professional climate of a medical school. In studying faculty mobility from the institutional point of view, data on faculty attrition is closely examined. A faculty coefficient for each medical school was determined by the ratio of the number of salaried faculty in the school that year. Twenty-seven variables were selected to predict faculty attrition. These variables fall into four broad

categories: size of institution, faculty variables, financial variables, and miscellaneous variables. The most notable finding reflects the low correlation of the 27 institutional predictor variables with the criterion. It may be that other institutional variables were not included in the present study that related to faculty attrition, or that few variables capture the variance in common among medical schools regarding faculty attrition. The age of the institution and percent of foreign medical graduates on staff were effective independently in predicting high faculty attrition. (Author/KE)

Descriptors—Academic Rank (Professional), Age, \*Employment Patterns, \*Faculty Mobility, Geographic Location, \*Higher Education, \*Medical Education, School Environment, Sex (Characteristics), Surveys, \*Teacher Characteristics, Training

Excessive faculty mobility, from the medical school standpoint, can be interpreted as an undesirable event to the institution. Are there identifiable personal and institutional characteristics that are associated with high employment mobility? A mobility index that shows the relationship between the number of medical school jobs held and the number of years of medical school employment was used to differentiate the characteristics of faculty at opposite ends of a continuum of mobility. The three mobility categories of faculty were compared on eight variables associated with medical schools. Faculty variables included sex, type of degree, academic rank, nature of employment, support for predoctoral training, areas of responsibility, and country of graduation. Institutional variables were ownership, department type, and geographic location. Findings were: (1) faculty mobility groups did not differ significantly with respect to administrative level or predoctoral support. The highly mobile faculty did not appear to have developed the degree of attachment or commitment to the medical school attained by the highly faculty, were generally found to be in the lower usually untenured ranks, had however responsibilities at the medical school, had professional preparation outside the United States or Canada, and had received less postdoctoral training as a group. Descriptors—\*Educational Objectives, \*Higher Education, \*Information Dissemination, \*Land Grant Universities, \*Opinions, Q Sort, Social Sciences, Social Values

Universities in two social settings may independently orient themselves to public service obligations and/or restructure the university system along similar lines to provide the information services demanded. Yet, with the achievement of the information systems capacity in agricultural colleges in the United States and with contracts and idea exchange between these universities the presence of an information systems capacity is more likely to be the product of diffusion than of independent invention. Some specific concepts are more acceptable than others and some are also more acceptable in one social setting than in others. Q-methodology, a method of opinion analysis that deals with priorities, provides insight into the priorities of the social sciences faculty at Columbia campus of the University and at NTU and Chungshing Universities in Taiwan. Assessing

diffusion by noting the deviation of item ratings from their ideal, typical placement in the Q-sorting seems to be useful. Generally, speaking, the social scientists on the Columbia campus rated basic landgrant concepts more favorably than those on the Taiwan campus. (Author/KE)

**Knowledge For What? Evaluation of a Weekend Residential Workshop.**

State Univ. of New York, Saratoga Springs. Empire State Coll.

Pub Date Aug 75

Note—45p.

EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage

Descriptors—\*External Degree Programs, \*Higher Education, \*Learning Experience, Student Needs, \*Student Opinion, \*Time Factors (Learning)

Identifiers—Empire State College (New York)

A weekend residency was held at Empire State College entitled, "Knowledge for What?—The Social Uses of Knowledge." Participants were Empire State College students from all areas of study. The total learning experience included the weekend residency and contract work based on the weekend. The report covers only the activities of the residency weekend and not the subsequent contract work of students. To evaluate the effectiveness of the format and the perceived learnings of participants, a student evaluation of the residency was conducted. The overwhelming majority (74 percent) of the students participating in the residency saw it as a way of facilitating their studies. Most participants (70 percent) reported that they had learned "some" and "quite a bit" from each of the following workshop activities: preliminary readings, lectures, seminars, informal discussion, and subsequent work related to the residency. Tables give more detailed information on student background, needs, and opinions relating to the residency. (Author/KE)

**Toward a Federal Strategy for Protection of the Consumer of Education. Report of the Subcommittee on Educational Consumer Protection.**

Office of the Assistant Secretary for Education (DHEW), Washington, D. C.

Pub Date Jul 75

Note—75p.

EDRS Price MF-\$0.76 HC-\$3.32 Plus Postage

Descriptors—Agencies, \*Consumer Protection, \*Delivery Systems, \*Federal Aid, Federal Programs, \*Higher Education, Performance Specifications, \*Post Secondary Education, Student Rights

In recent years there has been growth not only in the number of students, but also in federal programs that provide student financial support. This document initiates formulation of a federal strategy for consumer protection that works in conjunction with efforts of the states, localities, consumer groups, and other private organizations, describes the responsibilities of federal agencies in postsecondary education as they deal with educational consumer protection, examines the status of federal programs and efforts to improve them, and discusses the issues and implications involved. Federal actions recommended that steps be taken by federal agencies: (1) to help insure students' rights in the marketplace; (2) to prevent or protect against abuses of educational consumers; (3) to arise out of their particular responsibility as funding or guaranteeing agencies; and (4) to strengthen activities of state and private agencies dealing with postsecondary institutions and their consumers. Some abuses commonly reported by students that are dealt with in the document are delivery programs of instruction that are different from those which both the student and the student funding organization were led to expect, and educational funding programs for meretricious rather than educational purposes. **Identifiers—**\*Faculty Development

Faculty development has become an increasingly prominent concept for a growing number of faculty and administrators in American colleges and universities. To bring about the significant improvements in instruction demanded by the new and difficult issues facing higher education in the 1970's, it is essential that a faculty development program be both comprehensive and based on a set of diverse, though related strategies. Our proposed approach to faculty development is based on the assumption that significant changes must take place at the three levels of attitude, process, and structure. This handbook, designed as a self-contained guide to faculty development, presents both theoretical guidelines and practical suggestions for actually doing faculty development. The first section presents a brief overview of faculty development. Next follow sections on instructional, organizational, and personal development. Each of these sections contains separate chapters on such issues as classroom observation and diagnosis, decision-making, and helping skills. Each chapter typically includes an introductory discussion followed by related instruments, handouts, and exercises. A final section suggests a number of ways colleges and universities can develop and sustain their own faculty development programs. (Author/KE)

This document has been developed as a companion to the NCHEMS Statewide Measures Inventory with the objective of assisting individuals in the identification of available sources of data that can be related to postsecondary education planning and decision making in the United States. It identifies and describes a number of publications, articles, and data bases that contain data related to most of the items of information identified in the NCHEMS Statewide Measures Inventory. This document does not contain the actual data, but it does describe and reference various sources where the data can be found. In addition, it provides information about: (1) how the data are organized (for example, item-by-item, in tables, by chapters); (2) the level of aggregation (for example, data on personal income, number of high school graduates, enrollments in postsecondary education institutions); (3) the level of aggregation (for example, by region, state postsecondary education institution); (4) the years for which data are available; and (5) those measured in the Statewide Inventory that correspond to the data reference. Note—111p.

**EDRS Price MF-\$0.76 HC-\$5.70 Plus Postage**

**Descriptors—**\*Age, Graduate Students, \*Higher Education, Part Time Students, \*Sex (Characteristics), Statistics, Surveys, \*Tables (Data), \*Undergraduate Students

There has been considerable discussion in the literature of higher education regarding significant changes in student body characteristics. The data in this document examines distribution of students at the State University of New York system by age group and sex. Tables array four fundamental student characteristics: age, sex,

level (graduate/undergraduate), and load (part-time/full-time). Tables in Part II array age and sex by level and load for each institution of the state university; Part I contains summary tables for institutional types by headcount and percentage distribution. Two points of particular interest that can be made on the basis of this data are: (1) the majority of undergraduate students at the state university are over 18 and less than 23 years of age, but 33.1 percent are over 23 years of age; (2) 48.4 percent of the undergraduates under the age of 35 are women, but 60.3 percent of the undergraduates over the age of 35 are women. **Identifiers—**Equal Pay Act, Executive Order 11246, \*National Labor Relations Act

This document explores some of the interrelationships between the collective bargaining process and equal employment issues. The National Labor Relations Act, the federal collective bargaining statute, is the focal point of the labor law discussion because it has had significant impact on the drafting and interpretation of state labor legislation and stands on an equal footing with federal equal employment laws. The federal labor statute, applicable to private colleges and universities is discussed, underscoring the Act's application to discrimination in employment based on race, sex, religion, national origin or color. Next, four federal equal opportunity laws—Title VII of the 1964 Civil Rights Act, the Equal Pay Act, Executive Order 11246 as amended, and Title IX of the 1972 Educational Amendments—are briefly described, emphasizing their impact on labor relations matters. Finally, some suggestions for higher education collective bargaining in the context of equal employment obligations are given. To the extent possible, an attempt is made to shape the principle of law, which arises in an industrial setting, to conceptually fit a situation involving faculty organizing or collective bargaining and campus equal employment issues. Much of the discussion is applicable to both faculty and nonfaculty employees. (Author/KE)

**Descriptors—**Affirmative Action, \*Collective Bargaining, Employer Employee Relationship, \*Grievance Procedures, \*Higher Education, \*Methods, Negotiation Agreements, Negotiation Impasses

The increased intensity of antidiscrimination enforcement measures has caused colleges and universities to reassess their operational procedures affecting students and employees. In recent months it has become clear that the powerful forces of antidiscrimination and collective bargaining intersect at a number of critical points that need clarification, understanding, and a deep desire to find equitable solutions to the legitimate concerns of each party. This document lists suggestions for handling problems that may arise during the several phases of collective bargaining. Listed are suggestions concerning: (1) election campaigns; (2) current policies and practices; (3) membership on bargaining; (4) "good faith bargaining"; (5) preamble to the contract; (6) appointments, tenure, and promotion; (7) college calendar; (8) grievance procedures; (9) leaves of absence and health benefits; (10) non-

discrimination clauses; (11) general working conditions; (12) part-time faculty; (13) past practices or benefits; (14) personnel committees; (15) personnel files; (16) "recognition of agent"; (17) retirement of agent; (18) retirement plans; (19) retrenchment; (20) salary schedules, merit salary increases, promotion, etc.; (21) affirmative action plan note in contract; (22) fair representation; (23) picketing and strikes; (24) grievance procedures; (25) liability of employer; (26) illegal contract provision. **Identifiers—**\*Educational Support

Inadequate support is presently offered for the study of certain important questions which have serious implications for educational policies affecting women. Priority should be given to the support of those areas of research and program development and evaluation that have the most critical implications for both the higher education of women and women's status in institutions of higher education. Support should include: (1) research on coeducational and sex education experiences, outcomes of affirmative action, career patterns of women, living arrangements, intellectual development, women's psychological autonomy, social policies regarding families; (2) development and evaluation of women's studies, women's centers, counseling services, efforts to encourage women to enter other than traditional majors and/or career fields, "coping training," sex distributions, the means to raise the level of women's qualitative skills, classroom sex ratios; recruitment of women to the field of educational evaluation, statistics as a more integral part of women's education, efforts to attract women faculty; and (3) strategies to improve program development, information storage, and to encourage new hypotheses pertinent to woman's education and development. **Descriptors—**\*Higher Education, \*Measurement Techniques, \*Models, Planning, \*Statistical Analysis, \*Success Factors, Systems Development

**Identifiers—**Austria, \*University of Linz

This document summarizes a project that measures students' results by statistical analyses of examination data at the University of Linz, with special reference to the possibilities of institutionalizing the methods obtained. The survey included 609 students enrolled in business studies from 1966 to 1969. Studies at the university are pursued in two stages, four semesters each, that lead up to what may be translated as half-degree and degree examinations. Student success was measured in terms of: (1) the behavior of a student intake chosen from a field of study; (2) new methods of analysis usable in an institutionalized system; (3) models designed to forecast a student's probable success or failure; (4) a basis for decisions to improve conditions of study, with the help of a simulation model; (5) an attempt to define a global, theoretical model for the study sequence; and (6) proposal for an institutional-

ized system for the whole of Australia to enable examination data to be processed by a central computer. While the possibility of applying the Linz model depends on the existence of relatively well-structured study regulations, the system might also be slightly amended to apply to any university, provided that the student was obliged to report before the end of his studies. Identifiers—\*Recurrent Education

Recurrent education, as developed in the past four or five years in a number of European countries, is seen as a process of formal, full-time, for credit instruction for adults beyond the age of compulsory schooling in which participation was supposed to take place during intermittent periods throughout the adult working life-span. This would include provisions for reciprocal entrance and exit between recurrent education and work experience. The central feature is the emphasis on formal instruction for credit that leads to certificates of completion recognized in the society as credentialing the student to perform occupational or job-related functions in a production and service economy. While there is serious doubt about the desirability of recurrent education as a substitute for higher education, adult education, or adult learning, the metaphor of recurrent education can be used to teach us something about alternative social meanings available for the future of postcompulsory education. After examination of the implications of the concept of recurrent education, it is found that the future of adult education and learning is not best served by the recurrent education model imported from Europe. **National Developments and Consumer Protection.**

Pub Date 75

Note—9p.; Paper presented at the Conference on Consumer Protection and Postsecondary Education (September 1975)

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—\*Consumer Protection, \*Federal Legislation, \*Federal Programs, Performance Specifications, \*Post Secondary Education, Private Agencies, Student Needs, \*Student Rights

Consumerism as a student-oriented approach to postsecondary education is one that rests on two fundamental premises: (1) it is important that students receive fair treatment in their roles as educational consumers; and (2) some current practices in postsecondary education are not adequately responsive to student needs. Consumerism implies a reform-mindedness and, specifically, a need for institutional structures that reflect sensitivity to student rights and needs. Much has already taken place, and some of the broad outlines of consumer reform in postsecondary education already seem to have taken shape. The most visible activity is in the form of governmental action, including legislation establishing a set of "minimum standards" for institutional operations, and the Federal Interagency Committee on Education (FICE), which includes representatives of all federal agencies with responsibilities in the area of education. Whether there will be a great increase in consumerism activity in the private sector is still very much an open question. (Author/KE)

**Budgeting Format and Program Analysis: Account Crossover and Cost Study.**

Pub Date Jun 75

Note—13p.; Paper presented at the Annual Florida Statewide Conference on Institutional Research (8th, West Palm Beach, Florida, June 1975)

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—\*Budgeting, \*Cost Effectiveness, \*Higher Education, Operations Research, \*Program Budgeting, \*Systems Analysis

Unit cost is an anticipated offspring of the pressing notions of accountability, efficiency, and comparability, coupled with the decreasing availability of both public and private resources for higher education, and the increasing cost of deliverance of higher education in general. The two most widely used measures of unit cost in higher education are, among others, the unit cost by discipline and by program. In order to calculate meaningful costs of any sort, the following resources are necessary: (1) conceptual framework; (2) methodology; (3) data base; and (4) manpower and other related resources (e.g., computer time). Depending on the unique budgeting format of each institution, different procedures would have to be developed to get the accounts crossed over and complete the cost of study. Owing to the diversity of budgeting and accounting practices in different institutions, it appears that no single ideal budgeting format can be suggested. The implications and ramifications

of a cost study are often beyond the original intended use of the results. Care must be devoted to the development of a clear conceptual framework and some well-defined procedures before embarking on the work of crossing over the accounts. (Author/KE)

Despite the efforts of an array of Federal, State, and private agencies, the spectre of fraud in higher education is increasingly common. The logical arena for corrective action is the states. It is they who hold the authority to charter, license, and in essence permit America's more than 1,000 private degree-granting institutions to exist. But only 25 states in the country can claim functioning licensing operations. The methods and criteria by which state licensing operates remain elusive and poorly defined. Features of nontraditional education such as time- and place-free degrees and credit for prior learning leave licensing officials groping for standards. Complicating the situation is the rapid change from single-campus tradition to an interstate marketplace in which institutions of all persuasions are setting up extensions and external-degree programs far from home. Recommendations are that: (1) nonlicensing States get into the act; (2) a comprehensive interstate information clearinghouse be set up; (3) technical assistance and research services be given to the sparse and untrained staffs that comprise licensing authority in most states; and (4) additional conferences and active participation of state licensing officials in all aspects of the reform movement. This document is designed to provide assistance to those students seeking information on colleges and universities that offer law enforcement and criminal justice degree programs. For this 1975-76 directory, questionnaires were mailed to every college and university in the United States and to those colleges and universities known to be offering criminal justice degree programs in Canada. The completed questionnaires indicate that there are 664 institutions offering 729 associate, 376 baccalaureate, 121 masters, and 19 doctoral degrees in the areas of law enforcement and criminal justice. In contrast, there were 40 associate and 15 baccalaureate and graduate degree programs available in this nation in 1960. The directory covers: (1) number of law enforcement and criminal justice degree programs available; (2) associate degree programs; (3) baccalaureate and graduate degree programs; (4) police officer enrollment data; (5) program listings by state; (6) program listings by colleges and universities; (7) the Law Enforcement Education Program (LEEP), which provides financial support for the college education of police, courts, corrections and other law enforcement and criminal justice practitioners; and (8) addi-

tional International Association of Chiefs of Police publications. (Author/KE)

Note—64p.

EDRS Price MF-\$0.76 HC-\$3.32 Plus Postage

Descriptors—\*Administrator Role, Bibliographies, \*Developmental Programs, Developmental Tasks, \*Financial Support, \*Higher Education, \*Management, Trustees

Among the many truisms in the management of higher education is that success in a college or university development program depends heavily upon the knowledge, skills and attitude of the president. Yet most presidents come to the job with minimal experience in fund raising. The presidential selection process itself tends to underemphasize this particular aptitude. Many if not most of the other activities over which the president must preside can be delegated to experts but the function of development (including alumni and public relations), more than any other area of concern, seems to fall to the responsibility of the president. Some issues in the field of college and university development are: (1) the president's management role; (2) elements of a development program; (3) developing a long-range master plan; (4) the president's leadership role in motivating trustees; (5) the trustee's view of the president in his/her development role; (6) organizing and evaluating a development program; and (7) developing private support. Appropriations of State Tax Funds for Operating Expenses of Higher Education 1975-76.

National Association of State Universities and Land-Grant Colleges, Washington, D. C. Office of Research and Information.

Pub Date Nov 75

Note—29.

EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage

Descriptors—Colleges, Comparative Analysis, Extension Education, \*Financial Support, \*Higher Education, Medical Schools, \*Post Secondary

Education, Resource Allocations, Scholarships, \*State Aid, Tables (Data), \*Tax Allocation, Universities

This document is a collection of data summarizing state support for higher education. The figures show a wide variation among the states and an even wider variance among institutions. While it is impossible to eliminate all inconsistencies and accomplish absolute comparability among states and among institutions, some uniformity is achieved by including only certain information. Information includes: (1) sums appropriated for the annual operating expenses of the institutions of higher education; (2) pre-allocated state taxes whose proceeds are dedicated to any institution of higher education; (3) wherever practical, separate appropriations for medical centers, agricultural experimental stations and cooperative agricultural extension services, off-campus outposts of universities or land-grant institutions; (4) sums derived from state tax funds and appropriated for state scholarships; and (5) only net state tax funds. The data are in preliminary form and subject to verification and change. (Author/KE)

Graduate Degree Survey. Overview of Five Year Population (1969-1974).

State Univ. of New York, Fredonia. Coll. at Fredonia. Teacher Education Research Center. Pub Date Oct 75

Note—51p.

EDRS Price MF-\$0.76 HC-\$3.32 Plus Postage

Descriptors—College Environment, Economic Factors, \*Enrollment Influences, \*Graduate Study, \*Higher Education, \*Masters Degrees, \*School Surveys, Student Motivation, Student Opinion, Time Perspective

The Graduate Degree Survey was designed to ascertain graduates' reactions to master's degree programs at Fredonia, to discover the types of students who enroll for advanced work, the fields of interest, and the time lapse between completion of the undergraduate degree and when the master's degree program was started. Incentive for enrolling, years spent in securing the degree, life-styles, distances, traveled for course work, and involvement in campus-community life were all factors that were considered in the Graduate Survey. Open-ended items were included to encourage the respondents to express their ideas freely and candidly. Tables and appendices are included. (Author/KE)

The Academic Common Market. 1976.

Southern Regional Education Board, Atlanta, Ga. Pub Date [75]

Note—75p.

EDRS Price MF-\$0.76 HC-\$3.32 Plus Postage

Descriptors—\*Cooperative Planning, Directories, \*Higher Education, Program Descriptions, \*Program Planning, \*Regional Planning, \*Statewide Planning

Identifiers—\*United States (South)

The Academic Common Market is an interstate agreement among Southern states for sharing academic programs. Participating states are able to make arrangements for their residents who qualify for admission to enroll in specific programs in other states on an in-state tuition basis. Thus far, the arrangements have been limited to unusual graduate programs. Every Southern state has programs that are not offered in some of the other states and that can accommodate additional students. To enroll as an Academic Common Market student, you must: (1) be accepted for admission into a graduate program to which your state has obtained access for its residents through the Academic Common Market; (2) Obtain certification of residency from the Common Market coordinator in your home state. This document lists, state-by-state, the graduate opportunities available to residents of Southern states through the Academic Common Market and gives brief descriptions of the programs and addresses for direct inquiries about admissions. Identifiers—\*Oklahoma

These tables summarize degrees conferred in both state and private Oklahoma colleges and universities. They cover a period from 1973-75 and compare this period with previous semesters. Included are associate degrees, certificates, bachelors, first professional, and graduate degrees. Tables list students' sex, division of study, and field of study. One finding was that during the academic year of 1974-75, a total of 21,731 degrees was conferred in Oklahoma colleges and universities. A decrease of 280 total degrees conferred resulted in a 1.3 percent decrease over the 22,011 total degrees conferred in 1973-74. (Author/KE)

Report of the Regents Advisory Commission on the Problems of Postsecondary Institutions.

State Univ. of New York, Albany. Office of the Regents.

Pub Date 1 Sep 75

Note—211p.

EDRS Price MF-\$0.76 HC-\$10.78 Plus Postage

Descriptors—Educational Finance, Enrollment Trends, \*Higher Education, Population Trends, \*Post Secondary Education, Private Colleges, \*Public Policy, \*State Boards of Education, State Universities, \*Statewide Planning

Identifiers—\*New York

Enrollment decline exacerbates the problems, especially the financial problems, confronting individual institutions in higher education systems. This produces and is likely to continue to produce greater problems in New York State because of the large size and rapid growth of the public higher education school system and the current and prospective population trends of the state. The Regents Advisory Commission, established to examine the role of public policy in the solution of these problems, discusses these issues in general terms. The staff report provides more detailed documentation and explication of the sources and the extent of institutional financial problems and of trends and prospects in enrollments. The Commission seeks a state policy that permits institutions, public and private, to compete under state financing policies based on fair rules of the game, as they seek to attract students and serve public needs. Program Effectiveness and Related Costs (PERC): An Overview.

State Univ. of New York, Saratoga Springs. Empire State Coll.

Pub Date Aug 75

Note—45p.

EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage

Descriptors—\*Cost Effectiveness, Data Analysis, Data Collection, Data Processing, \*Higher Education, \*Models, \*Planning, Policy Formation, Program Costs, \*Resource Allocations

A major challenge in higher education is to build evaluation models that first of all spell out various effectiveness measures and then related cost data. The Program Effectiveness and Related Costs (PERC) framework addresses this problem. The five components of PERC are outcomes, costs, students, learning programs, and faculty. An overview and discussion of the PERC model points out certain minimum tasks that must be completed to build relationships between program effectiveness and related costs. These tasks are: (1) trace what happens to students while attending the institution and how much money is spent from all sources in various programs to achieve results; (2) obtain data on specific intellectual and personal attributes of students on entry and completion of their programs; (3) collect data about student change and development from at least two sources; (4) use two types of measurements, quantitative and qualitative, to study and evaluate student change and development; (5) interpret and evaluate data from two points of view. The result will be a major rethinking of institutional priorities and adoption of new ways of allocating scarce resources. (Author/KE)

*Burghardt, B. Vivian***Personal and Institutional Data of Institutional Research Activities and Products at Predominantly Black Institutions.**

Pub Date May 74

Note—22p.; Paper presented at the Annual Forum of the Association for Institutional Research (May, 1974)

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—Data Analysis, \*Data Processing, Decisionmaking, Educational Accountability, \*Higher Education, Information Systems, \*Institutional Research, Management Development, \*Negro Colleges

Recent trends indicate the increasing concern regarding the broad issue of accountability at institutions of higher education. Because of this, colleges and universities are being forced more and more to base their decisions on hard fact instead of intuition. The institutional research function is instrumental in assisting in this kind of data collection and analysis. To determine the extent to which predominantly Black colleges were fulfilling this function, a questionnaire was devised to solicit information regarding institutional activities and products at the predominantly Black colleges. An assessment of the institutional research activities and products at these colleges suggest that the growing complexities of management and the societal pressures for a greater degree of accountability in the last two decades serves as a mandate and an impetus to organize and synthesize data that supports the existence of these institutions. This trend is in keeping with the national and local questions raised as to the quality and legitimacy of higher education in general. (Author/KE)

Descriptors—Attitudes, \*Career Opportunities, Comparative Analysis, \*Educational Programs, Educational Quality, \*Higher Education, \*Military Personnel, Motivation, \*Officer Personnel, Surveys, Vocational Development

This document presents the results of a comprehensive 1973 Reserve Officer Training Program (ROTC) survey of enrollment potential and career potential for a variety of college-based military officer training programs. It indicates the extent of career motivation among 1973 enrollees and makes comparisons with a similar survey of 1972 enrollees. Some comparisons made are (1) the levels of factual knowledge of, and attitudes toward, military officer training programs; (2) factors related to expressed interest in applying for enrollment in ROTC programs; and (3) the perceived quality of ROTC instructional course work. Additional results indicate that: (1) a majority of cadets were willing to stay and continue into the advanced program, even without financial aid; (2) the proportion for Army enrollees was much lower than for Navy enrollees; (3) almost half of all advanced cadets were undecided about staying on active duty for more than one tour of duty; (4) "military career opportunities" and the chance for "travel, adventure, and new experience" were the most commonly cited reasons for entering ROTC; (5) Navy cadets also endorsed the opportunity for further academic education; (6) a majority of Army and Air Force scholarship enrollees indicated they would have entered ROTC without a scholarship; and (7) over 60 percent in all services indicated they would enter ROTC without substantial allowances. (Author/KE)

Identifiers—\*Thirteen College Curriculum Program

This document reports on some student impact results of the Thirteen College Curriculum Program (TCCP). The TCCP is a major effort in intervention and reform in the higher education of black Americans generated in predominantly black colleges. The goals were to reduce attrition rates by improving the quality of instruction at freshman and sophomore levels of college. The initial efforts and the kinds of results here are responsible for the fact that 41 schools have now been involved in trying to replicate these initial findings in a much larger group of institutions. In the body of the report the findings in each area are first presented as a composite picture, followed by a discussion of the comparative differences between the three previously identified groups of seniors. In general, the study reports the positive outcomes of the TCCP. It implies that long-range gains can be made by black students who are in an innovative curriculum intervention program during their freshman year. Indirectly, the results of the study indicate the positive outcomes of ISE's recurring summer and winter faculty development efforts with freshman instructors on student growth and development. Identifiers—\*Our Lady of the Lake College

Our Lady of the Lake College (OLL) has been engaged since early 1974 in coordinated development of a competency-based learning program. After tracing the program's evolution from its beginnings in 1971, described are: (1) competency formulation, evaluation and curriculum; (2) experimental programs - the Mentor Program and the Personal Development Seminar; (3) academic support systems - the Assessment Center and the Learning Center; (4) administrative support system - coordination and design; (5) dissemination of information - within the OLL community and to outside audiences; (6) the futures - the second year of the project and follow-up funding. While the first year of the project seems a successful one in terms of short-term objectives, it is more difficult to analyze progress toward the project's long-range objectives. Some of these objectives cannot be fully assessed until the first students graduate from the competency program. Some results at this time indicate that there is an increased interest in curriculum and educational process among faculty, students, and administrators. (Author/KE)

Descriptors—Educational Objectives, Financial Support, \*Government Role, \*Graduate Study, \*Higher Education, Manpower Utilization, \*Public Policy, \*Public Support

What role should the federal government play in support of graduate education? Based on the principles that: (1) American graduate education and research establishment is a national resource; (2) the market for highly trained manpower is national; (3) the federal government itself employs the service of many highly trained personnel; (4) it is in the national interest for the federal government to stimulate response to changing manpower and knowledge needs; (5) the federal government can encourage students to enter less lucrative careers that are in the national interest; (6) government decisions have a far-reaching impact on both the supply and/or demand for knowledge and manpower; (7) knowledge is part of the public domain; (8) the federal government can best redress social disadvantages resulting from disparities of race, income, ethnic origin, or sex, it follows that the federal government has two primary responsibilities with respect to graduate education: (1) to assure availability of sufficient manpower and knowledge to meet specific areas of national need; and (2) to assure that an optimum pool of qualified talent exists in all areas of knowledge essential to the long-term cultural and practical requirements of the nation. Federal policy must recognize the necessity of providing a consistent and reliable level of support so that universities will be able to plan and effectively administer their programs. (Author/KE)

Design theory should identify candidate designers, specify design behavior to be measured, and discriminate between behavior of designers and nondesigners. A study evaluated different formats of computerized structural display and data entry to measure design behavior. A program using graph theory as an internal data structure in the computer and as a display to the operator was developed. Graphics display was used to construct a learning task with directed graphs and graphic data entry. The subjects were given varying portions of the spatial cues ordinarily available in fixed display. Results showed that spatial cues offered through interactive graphics were a significant advantage in the learning of directed graphs. When spatial cues were available, no difference between different learning formats was found. When spatial cues were denied during learning, delay of the posttest was detrimental to performance. Regularly ordered formats of displays of directed graphics led to confusion for some individuals. In general, the use of interactive graphics for learning structural digraphs was better than the use of nonspatial media. (CH)

Computer programs capable of describing the thermal behavior of buildings are used to help architectural students understand environmental systems. The Numerical Simulation Laboratory at the Architectural School of the University of Texas at Austin was developed to provide the necessary software capable of simulating the energy transactions affecting the environment of internal spaces of buildings and to make these programs easily accessible to students. Several specialized programs of the Dynamic Energy Response of Buildings (DEROB) system were integrated to describe the energy transactions within a building: Solar generates solar exposure tables; PERSP produces solar perspective views of the structure; GLASS uses dielectric algorithms to describe the dynamic energy responses of solid walls; and DYNWALB describes the energy behavior of opaque walls. Evaluation of the architectural design course using computer-assisted instruction shows an increase in skills and a strong level of student receptivity to the project. (CH)

Symbolic Interactive Matrix Processing Language (SIMPLE) is a conversational matrix-oriented source language suited to a batch or a time-sharing environment. The two modes of operation of SIMPLE are conversational mode and programing mode. This program uses a TAURUS time-sharing system and cathode ray terminals or teletypes. SIMPLE performs all the standard operations on matrices, and eigenvalues, eigenvectors, remote plotting, and inquiry commands are also available. Self-paced instruction through TEACH commands allows the student to proceed at his own pace while maintaining full documentation. This paper is an introduction for the novice and a reference guide for the casual user. The SIMPLE Reference Manual provides a more rigorous definition for the experienced user. (CH)

The development and capabilities of an interactive preprocessor program with graphics for an existing three-dimensional finite element code is presented. This preprocessor program, EDGAP3D, is designed to be used in conjunction with the Texas Three Dimensional Grain Analysis Program (TXCAP3D). The code presented in this research is capable of the verification and modification of data generated by TXGAP3D. The particular areas which can be handled by the code are those of grid point location, element connectivity, and boundary condition information as well as the addition and deletion of elements from the generated data. The interactive graphics provide a simple flexible visual aid and can be used with any graphics machine capable of interpreting standard Calcomp instructions. A user's input guide to EDGAP3D is appended along with an example session illustrating the use of the preprocessor program. (Author/CH)

Identifiers—Aircraft Design, FIGHTER, Project C BE

A computer program for the sizing of subsonic and supersonic fighter planes was adapted for use in an aerospace engineering course at the University of Texas at Austin. FIGHTER uses classroom notation and separate subroutines for different disciplines to implement the conceptual design process. Input consists of a set of design variables and a set of mission variables. FIGHTER begins by computing the geometry of the aircraft. Next, it is flown (on the computer) through the prescribed mission to compute fuel requirements. After the aircraft has been flown through the entire mission, the design variables, the geometry, and the fuel weight are used to compute a new take-off gross weight. The entire process is repeated until assumed gross weight and computed gross weight differ by a small amount. A formal evaluation of FIGHTER was made by eight instructors of aerospace technology at other universities who used the program. (CH)

Identifiers—Learning Styles, Project C BE, SCRAPE

Students enrolled in an organic chemistry course were given a diagnostic inventory according to the SCRAPE model. Information was obtained on 11 motivational personality variable and three attitudinal variables for students in both computer-based instruction and regular instruction sections. Descriptive statistics were obtained on each instrument for the two groups, and correlations among variables were examined. Students with higher scores on the academic philosophy of the Orientation Toward College Inventory (OTC) has higher course grades. Abstract conceptualization was found to vary positively with course grade. Higher scores on the task scale of the Bass Orientation Inventory (ORI) were positively related to higher course grades for computer-based instruction while low scores on the task scale had higher grades in the regular instruction group. On the interaction scale of the ORI the high scorers in computer-

based classes had lower grades while the high scorers in the regular group had higher grades. In computer-based instruction sections, applied science majors generally tended to have lower course grades, but had more favorable attitudes toward the course and the computer. Copies of the diagnostic inventories are appended. (Author/CH)

**Identifiers**—Bass Orientation Inventory, Computer Sophistication Questionnaire, Learning Style Inventory, Project C BE

The instruments used in the evaluation of Project C-BE (computer-based instruction) are presented and described in this report. A brief description of each instrument, its purpose, developmental history, references and reliability studies are provided. These instruments were administered to Project C-BE classes in an attempt to identify psychological variables which could be used to predict performance in various computer-based instruction settings. These variables included personal tendencies revealed by the Bass Orientation Inventory (ORI) and preferences in college indicated by the Orientation Toward College Inventory (OTC). Preferences in learning and activity settings were assessed with the Learning Style Inventory (LSI). Familiarity with computer technology and nomenclature was tested with the Computer Sophistication Questionnaire (CSQ). Student attitudes toward the course and toward computer based instruction were assessed with pretest and posttest questionnaires so that changes in attitudes due to exposure to computer-based education could also be measured. Selection and specification of a minicomputer time-sharing system to extend computer facilities for large scale computer-based instruction projects at the University of Texas at Austin are described. Two and a half years of implementation and operating experience are summarized followed by seven specific course applications of the minicomputer. Operating costs for the minicomputer and detailed and personnel requirements and functions are described for this system. The user subroutine and the usage accounting system are appended. **Identifiers**—Project C BE, \*Workshop Planning

This report is a guide for those who wish to acquire an understanding of the process of conducting workshops in computer-based instruction. Planning documents, handout material, visual training aids, and computer programs are contained in the report. Descriptions of five workshops are provided to indicate the nature of programs which have been held for university-level educators. The authors give strategies for workshop planning starting with long-range preplanning to actual conduct and evaluation of the workshop. The materials from the CCUC/6 Computer Conference at Texas Christian University in 1975 which are appended, illustrate typical instructional materials, leader materials, audiovisual aids, participant workbooks on computer material design for curriculum revision, and handout materials. **Identifiers**—Child Observation Simulation, \*Computer Controlled Movie Projectors, Project C BE, Super 8 Films

Instructors in Child Development at the University of Texas at Austin selected sound motion pictures as the most effective medium to simulate the observation of children in nursery laboratories. A computer controlled projector was designed for this purpose. An interface and control unit controls the Super 8 projector from a time-sharing computer communication line. The projector operates in conjunction with a computer terminal. When special control characters are received, the controller will intercept the character string and perform the necessary control commands which enable the student to locate any section of film within a specified tolerance and time interval. The system will be evaluated for cost-effectiveness as a teaching device by comparing traditional learning methods and learning by simulation. Development costs and system schematics for the projector are appended. (CH)

**Descriptors**—Childhood Attitudes, \*Consumer Economics, \*Consumer Education, Elementary Education, Grade 3, Grade 6, Kindergarten Children, Parent Attitudes, Parent Influence, Research Reviews (Publications), \*Television Commercials, Television Surveys

In this survey a sample was taken of kindergarten students, third graders, and sixth graders of both sexes and of varying socioeconomic backgrounds for the purpose of exploring their attitudes toward television commercials. Questions concerning the child's mother's attitude towards commercials, the child's cognition of commercials, and the child's consumer patterns led to these conclusions: (1) mothers give

little attention to consumer teaching; (2) older children become more aware of the purposes of commercials; (3) children's skepticism toward commercials increases with age and can usually be traced to a disappointment with an advertised product; and (4) selecting of "favorite commercials" is related to the frequency of the advertisement and the child's own interests. **Descriptors**—Case Studies, Librarians, Library Administration, \*Library Education, Library Science, Professional Education, \*Role Playing, \*Simulation, Teaching Methods, Teaching Techniques, \*Textbooks

The teacher of library science can use case studies, simulations, and role playing to acquaint future librarians with the realities of library management. By using models, contextual statements, incident materials, and course management materials, the students can be involved in specific library problems which will later have broad on-the-job application. In order to most effectively use this method, the instructor must change from the traditional teacher-centered model to a facilitator model where he initiates and evaluates exercises, but is no longer the focus of class attention. Sample exercises, a bibliography, and hints on the design of simulation materials are provided in this textbook. (EMH)

Faced with task duplication in its public branch libraries, the Library Council of Victoria, Australia, undertook a feasibility study called Technibl to determine whether a central cataloging and processing bureau should be established. Consultants considered the practicality and expense of introducing a centralized cataloging service using the Machine Readable Catalog (MARC) System. Particular attention was given to the potential expense of making MARC compatible with the already existing system. The contents of the report include a needs survey, a proposal for the organization of the new center, and a cost proposal for the construction and operation of the center. (EMH)

**Identifiers**—New Mexico

Owen G. Leach & Associates, under professional contract to the New Mexico State Library, conducted an opinion research study of New

Mexico citizens. This study determined that 52.5 percent of adults needed and wanted information available from library networks, but did not realize that this information could be obtained through libraries. A statewide public service media campaign was developed to demonstrate the library's ability to provide relevant information and to show the capacity of libraries for sharing resources as a way of broadening the capacity to deliver information. A communications strategy was presented to librarians in six workshops. Booklets and poster ideas were distributed to support local tie-in campaigns. TV and radio stations broadcast \$15,889 in public service announcements. The campaign was suspended after a free Inflation-Fighter Booklist campaign faltered due to less-than-expected local library participation. (Author/LS)

This monograph is an overview of the present and possible future trends in networking, the use of computer communications technology to facilitate the sharing of information and computer resources over great distances. The text reviews networks already being used by universities to share instructional resources and computing ability, and by libraries to facilitate systematic acquisition, serial control, and retrospective bibliographic searches. Networking implies problems of uniformity of users, unused capacity, fee sharing, and financial support; each problem is discussed in depth. With an awareness of possible budgetary and political constraints, the present state of network technology is discussed and predictions are made for the future. (EMH)

Educational linkage is a system for sharing facts, ideas, values, and skills related to educational work. An extensive survey was made of educational linkage programs, and an evaluation procedure for these programs was designed. Over 40 linkage models were classified as to level of sponsorship and/or service, institutional setting, services provided, focus of service, interaction with client, initiative for undertaking services and evaluated as to simplicity and applicability. To obtain cost factors, 24 kinds of linkage systems were grouped according to retrieval services, publication services, media services, and interpersonal services. An analysis of 1,294 responses to a questionnaire was made to obtain projections for changes in knowledge, attitudes and behavior. Recommendations include: (1) creation of a network of linkage personnel, (2) correlation of linkage services with computer information retrieval, (3) maintenance of standardized unit-cost service records, (4) use of expertise to create new services and project future utilization. There are two appendixes and a 17 page bibliography. (NR)

**Identifiers**—Serials Control System, University of California Irvine, University of California Los Angeles

The Medical Sciences Library of the University of California, Irvine acquired an on-line serials control system quickly and at low cost by entering into a consortium with the University of California, Los Angeles Biomedical Library, whose on-line serials system has been in existence and operating successfully for four years. The

conversion was funded by the National Library of Medicine grant and was carried out mainly by the existing serials staff. The conversion from a manual to an on-line system caused numerous problems, and though the system is an enormous improvement, there are still minor difficulties. (Author/EMH)

**Newsletters and the Library. Technical Paper Number 6.**

Wayne State Univ., Detroit, Mich. Univ. Libraries.

Pub Date Aug 74

Note—16p.

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

**Descriptors**—\*Cost Effectiveness, \*Libraries, \*Library Acquisition, Library Collections, Library Expenditures, Library Services, \*Newsletters, University Libraries

With the increasing cost of periodicals claiming an ever greater proportion of university library acquisitions budgets, a Wayne State University Education Library committee investigated the nature and value of newsletters. They considered two groups: commercial and noncommercial. The former are those which are published for profit and are intended to provide concise, specialized information to knowledgeable subscribers. They are meant to reach a decision-maker quickly and to be read quickly. The heterogeneous group of noncommercial newsletters is classified in tables according to readers and publishers, categories, and characteristics. Both are often of transitory interest, lack self-indexing, and are seldom cited in scholarly studies. When indexed, though, the research and subject-oriented newsletters, in particular, should be preserved. An acquisitions policy statement includes positive and negative criteria. It must be tested to determine its usefulness in evaluating the present collection and in aiding in future selections. (EMH)

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

**Descriptors**—Behavioral Objectives, Curriculum Development, Educational Objectives, Individualized Instruction, Instructional Design, \*Instructional Systems, \*Systems Approach, \*Systems Concepts, Teaching Methods

The first step in establishing an educational system is to assess the desired outcomes of the task and to state them as observable behaviors. The second step is to determine the optimal learning environment for the achievement of those goals. The final step is to set up a system of evaluating the quality of the instruction and the performance of the student so that the training can be corrected if it is in any way deficient. If the systems approach is to be successfully used, three preconditions must be satisfied: first, the goals of instruction must be identifiable; second, the process of instruction must be open to fundamental reorganization; and third, the goal must be achievable in a reasonably short amount of time. Difficulties are often encountered when a curriculum designer identifies only one course of action to achieve a goal, when in actuality there are many. The traditional teacher-centered model of instruction is also a frequent barrier to rearranging the educational environment. (EMH)

**Identifiers**—\*CAI Network Experiment

An evaluation was made of the biomedical Computer Assisted Instruction (CAI) Network Experiment, established by the National Library of Medicine in 1973 to test the feasibility of sharing CAI learning materials through a national computer network. The evaluation was designed to assist decision makers in planning a future mechanism for distributing biomedical CAI. The study focused on the institutions (95 as of October 1974) and people who use the network and the contractors who supplied the CAI library. Data sources included case studies, user reports, and interviews with hospital and medical school administrators, faculty, librarians, computer laboratory staff, and students. Network usage by program type, by user institution, and by class of user were analyzed. Also analyzed were the impact of the network on curricula, faculty, students, libraries, and media centers as well as the cost/benefits. The report includes a roster of the participants in the network experiment. (Author/EMH)

**Identifiers**—Federation Of Rocky Mountain States, \*Satellite Technology Demonstration

The Satellite Technology Demonstration (STD), a project of the Federation of Rocky Mountain States, Inc. (FRMS), employed a project management model for its organizational structure. The organization and management system utilized by the STD was designed to accomplish a predetermined set of objectives with the highest quality possible within a federally funded, prenegotiated budget. The management decision-making process was developed to maximize and control available resources in the accomplishment of specific tasks through a process of resource reallocations, task modifications, and intercomponent coordination. Therefore, the STD utilized a decentralized functional structure and modifications of applicable management science approaches including Management by Objectives (MBO) and Systems Theory. The primary subsystems of the management process were the Task Structures and Control and the Budgetary and Financial Control Subsystems. Specific techniques applied when appropriate included variations of the PERT system, linear programming, and general financial control systems. In some cases, it was the first extensive application of such techniques in a large scale social project. (Author/HB)

**Identifiers**—Public Information, \*Satellite Technology Demonstration

The Satellite Technology Demonstration (STD) is an attempt to use new satellite technology and low-cost ground terminals to deliver community service broadcast to rural areas. Since community involvement was one of the projects highest priorities, clear communication between local, state, national, and international agencies was imperative. The public information plan entailed: (1) designing and scheduling information dissemination at all levels; (2) filling requests for information about the project; (3) designing information for all STD audiences; (4) coordinating STD activities with other health, education, telecommunications agencies; (5) developing brochures, displays, and media shows; (6) striving for indepth coverage of STD activities in various media; and (7) serving as STD spokesman at various conventions and symposia. This information service not only facilitated leaders' ability to make decisions, it also increased participation at the local level. The appendixes to this document include lists of materials used, external presentations made, appearances made by the mobile unit, special satellite presentations, articles published, press conferences, and news releases. **Identifiers**—Federation of Rocky Mountain States, National Institute of Education, \*Satellite Technology Demonstration

The Satellite Technology Demonstration (STD) designed research for a satellite-based communication system that would transmit educational television programs. Their procedures were subject to a series of external and internal evaluations by the project sponsors, the National Institute of Education. In regard to external evaluation, STD recommended that: (1) The National Institute of Education should communicate in a more consistent, rapid fashion, provide more research and technical information, and facilitate information exchange between related research projects; (2) project personnel should be able to provide input into projected bids being evaluated by the sponsors and receive evaluations made by outside agencies; (3) the cost of these evaluations be considered at the project's onset. In regard to internal evaluations, STD recommended that: (1) experienced research personnel be hired at the project's initiation and work closely with management activities; (2) the additional positions of project historian, expeditor of data acquisition, and disseminator be filled. This is one of five papers on the project. (NR)

**Identifiers**—Federation of Rocky Mountain States, \*Satellite Technology Demonstration

The Satellite Technology Demonstration (STD) created a planning or formative process in the creation of an educational television series. The STD recommendations were: (1) define the process, in-depth, before developing the process; (2) make certain the process can adapt to unforeseen developments; (3) test the process by converting early scripts into video products for script review; (4) analyze the procedures; and (5) verify the results. This document details the use of this formative process on the development of "Time Out!"—a career education series designed for junior high school students and transmitted by communication satellite. **Descriptors**—Career Education, \*Communication Satellites, Curriculum Development, \*Educational Needs, Educational Programs, \*Educational Television, Evaluation Methods, Evaluation Needs, Information Needs, Instructional Media, Junior High School Students, \*Needs, Needs Assessment, Programming (Broadcast), Secondary Education

**Identifiers**—Federation of Rocky Mountain States, \*Satellite Technology Demonstration

The Satellite Technology Demonstration (STD) made a needs assessment profile as the first step in the creation of an instructional television series for junior high students, "Time Out!" The suggested sequence for a similar project is: (1) submit a list of potential projects to the appropriate decision-makers; (2) determine through personal contact which programs will have political, social and fiscal support; (3) develop instrumentation and collect data from those who work with the primary audience (teacher, administrators, counselors, parents); (4) develop instrumentation and collect data from a representative sampling of the primary audience; and (5) translate data into a feasible program. STD made the following recommendations: (1) the required personnel, time, and money for a large-scale project can be easily underestimated; (2) instrumentation should be reviewed by the program producers prior to the after field testing so that results can be meaningfully incorporated; (3) teamwork is required between the technical specialist and the program producers; (4) technical specialists should be involved in selection of the sample audience; and (5) a needs assessment profile should never be considered absolute. **Identifiers**—Federation of Rocky Mountain States, Internal Review Panels, \*Satellite Technology Demonstration

The goal of the Satellite Technology Demonstration (STD) is to create several types of educational television programs for a varied audience beamed by a communication satellite. The first program produced—"Time Out!"—was a career exploration series written for junior high students.

A "formative" semester permitted the series to be shown over 16 weeks to one audience and then revised by an internal review panel. STD made the following recommendations: (1) In cases of limited resources and a diverse audience, evaluation by a review panel, supplemented with audience data, is more satisfactory than the use of selected audience members or consultants; (2) panel should be composed of 5-6 members possessing a variety of knowledge and responsibilities and should include those responsible for implementing the results; (3) evaluation should be initiated simultaneously with video-production development; (4) members should make independent ratings, but should share findings in group dialog; (5) whenever possible, the primary source of similar evaluations should be done by the original audience with a panel used as a supplementary source. Identifiers—Federation of Rocky Mountain States, \*Satellite Technology Demonstration, Two Way Communication

Satellite Technology Demonstration (STD) was designed to provide data on the use of a satellite to deliver educational programs to 56 rural-isolated schools in eight Rocky Mountain States. Three series were broadcast: (1) a junior high school career development, (2) career development for public school administrators and teachers, and (3) topical programs for community members. The STD also used the Advanced Technology Satellite (ATS-3) as an interactive voice-link with 24 participating schools and recorded this data. Schools were defined as "interactive" and "noninteractive." Across all measures, the interactive students showed a greater number of learning gains and larger gains on those tests which reflected the cognitive aspects of the STD programming. The results of this research suggested that a satellite audio interaction system would enhance the quality of educational programming via satellite. Statistical tables show the results of measurements. (Author/DS)

Identifiers—Federation of Rocky Mountain States, \*Satellite Technology Demonstration

The Satellite Technology Demonstration (STD) of the Federation of Rocky Mountain States (FRMS) employed a technical delivery system to merge effectively hardware and software, products and services. It also needed a nontechnical component to insure product and service acceptance. Accordingly, the STD's Utilization Component was responsible for identifying popu-

lations that could use the Project's products and services and for facilitating user involvement through information services and training programs. Both of these functions required extensive interaction with other Project components (Broadcasting and Engineering, Programming, and Research), but the responsibility for coordinating products and services in the field remained with the Utilization Component. In order to coordinate products and services, Utilization had to: (1) develop and maintain a comprehensive field services network; (2) attract and hold audiences; and (3) promote regional telecommunications efforts. The organizational structure for Utilization was based on team interaction, on decentralization, and on a regional, state, and local field services network. (Author/HB)

Identifiers—Federation of Rocky Mountain States, \*Satellite Technology Demonstration

The Satellite Technology Demonstration (STD), through its unique field services network (the STD's Utilization Component), was able to develop and insure Project credibility among its many regional, state, and local participants. How the field service mechanism was used to maintain positive relationships between the STD and its many constituents was the focus of this report. Specifically covered were how federal and regional policies (reduction in Project funds) altered the STD's organization, programming, salary scales, training program, site selections, broadcast schedules, future plans, and equipment purchases. A description of how the field services network was used to insure acceptance of those changes among participants with no loss of support or enthusiasm for the STD is also presented. (Author/HB)

Identifiers—\*Satellite Technology Demonstration

Though the Satellite Technology Demonstration (STD) system had the capacity to deliver quality broadcast signals to specially designed ground terminals its budget did not provide for more than one receiver in each rural community. In order to translate the satellite signal into a broadcast available to the individual home viewer, several systems were available: (1) rebroadcast the signal via standard public television; (2) use microwave for direct transmission from one location to another; (3) use a translator station to repeat and amplify the signal in isolated locations; and (4) rebroadcast the signal via community cable television. In each region where

STD was employed, different combinations of technology were used to reach the largest audience possible. Unique plans were developed in Roundup, Montana; Ely, Nevada; Osborn, Idaho; and Elko, Nevada. Based on this experiment, future telecommunications managers are advised to learn to: (1) promote consensus among participants; (2) be willing to use a variety of technological adaptations; (3) provide potential users with sample programs; and (4) consider the size of the audience and the cost of the broadcast well in advance. Identifiers—Federation of Rocky Mountain States, \*Satellite Technology Demonstration

The Satellite Technology Demonstration (STD) is based on the premise that wide-scale distribution of instructional television beamed by a communication satellite is an alternate way of achieving instructional goals. Difficulties encountered are due to the fact that the traditionally stated goals of schools are ambiguous, there is little accountability for internal operations; classrooms have low interdependence; and investment in technology is limited. Any significant use of mediated instruction (30 percent of total instruction) will require role reorganization of the teacher, administrator, and district. Operational changes will be necessary in the certification of mediated instruction and the distribution of financial resources. Technology-advanced instruction can provide a more comprehensive curriculum, high quality courses at reasonable cost, inservice teacher education, and short practical training requiring specific skills. It can also monitor student progress, reduce administrative paperwork, and facilitate communications between schools and state agencies. (NR)

Identifiers—Health Education Telecommunications Experiment, \*Satellite Technology Demonstration, Two Way Communication Links, Voice Data Communications System

The diligent use of two-way voice links via satellites substantially improves the quality and the availability of health care and educational services in remote areas. This improvement was demonstrated in several experiments that were sponsored by the Department of Health, Education, and Welfare and the National Aeronautics and Space Administration. From 1972 to 1975, these experiments used the ATS-1, ATS-3, ATS-6 (Applications Technology Satellites) to examine the benefits of several different service-delivery configurations, in which one-way video, two-way

audio/data, and two-way links to 23 states were involved. (Author/EMH)

Intimately involved in any equipment system is the human factor. The people operating the equipment at the remote installations for the Satellite Technology Demonstration (STD) were different from paid employees or from private consumers. The STD site operators were paid only token fees; thus, they are best described as having been motivated by the service benefits of the system. Indeed, a survey of their interests and capabilities at the onset of the project showed little or no inclination for communications-type equipment. Although not necessarily unsolvable, the problem of training people to operate communications equipment is complex and unique. The STD, therefore, studied the stages and factors involved in training site operators. Initially, the prior experiences and capabilities of the site operators were isolated to provide a base of information against which the effects of the STD experience could be measured. Sequentially evaluated therefore were: (1) training; (2) initial results of the training program; (3) site operator performance throughout the demonstration; and (4) psychological disposition toward the hardware configuration. **Identifiers**—\*Satellite Technology Demonstration

The ground terminals for the Satellite Technology Demonstration were more expensive to install than was anticipated because crews forced to make numerous visits to each site. Delays were caused by delinquent deliveries and by malfunctions in some of the subsystems. Insufficient time was allowed for trouble shooting, and consequently, additional maintenance was later required. Despite difficulties, broadcasts began on schedule, and downtime has been held to a minimum. (EMH)

**Identifiers**—Denver Uplink Terminal, Health Education Telecommunications Experiment, Network Coordination Center, \*Satellite Technology Demonstration

This paper describes the network coordination for the Health, Education, Telecommunications (HET) system. Specifically, it discusses HET network performance as a function of a specially-developed coordination system which was designed to link terrestrial equipment to satellite operations centers. Because all procedures and equipment developed for the HET network control and interface were routed through, or originated at, the Network Coordination Center (NCC) in Denver, Colorado, the focal point of this report is the NCC. For perspective, general information is provided about the network including signal strength and hardware reliability findings. The paper is, however, primarily concerned with the management coordination function; equipment is discussed only to explain that function. Contained in detail are: (1) explanations about the technical mechanisms and administrative procedures used for coordination; and (2) analysis of the strength and weaknesses found in these joining elements. **Identifiers**—Federation of Rocky Mountain States, Materials Distribution System, \*Satellite Technology Demonstration

Because 16mm film programs for classroom use are expensive and distribution is unpredictable, the Satellite Technology Demonstration (STD) established a Materials Distribution Service (MDS) to transmit material via satellite to rural sites in the Rocky Mountains. The STD leased 300 programs from Encyclopedia Britannica Educational Corporation and 100 programs from Great Plains National Instructional Television. These films were then videotaped and used by STD schools at their convenience during the 1974-75 school year. A catalog of titles was made available to classroom teachers for selection and scheduling of films. Participating schools were required to purchase a video tape recorder (VTR) and monitor in order to use the service. The MDS was rated positive regardless of minor inconvenience such as equipment malfunction, copyright restrictions, and budgeting limitation. The project demonstrated that mass distribution of materials on an individualized, personalized basis is a viable potential for satellite delivery systems. A table showing the MDS audience attendance is included. (Author/DS)

Identifiers—J Series, \*Satellite Technology Demonstration, STD

The Satellite Technology Demonstration (STD) produced a series of 81 television programs called the "J-series" for junior high school students. This material was used to illustrate real life situations for a career development program. Because materials were expensive, the decision was made to produce "in-house" programs and use preproduced materials for the remainder. Of the 69 videotaped "J-series" programs, about 20 percent on-the-air time was used for existing materials. To evaluate the "J-series", the STD measured audience acceptance of existing materials and found that teachers evaluated existing materials as the best program segment but students rated them as second best. The 50 sources who allowed their films to be previewed and an annotated list of five companies as film sources are appended. (Author/DS)

Identifiers—\*Satellite Technology Demonstration, STD

The Satellite Technology Demonstration (STD) adopted a coordinated approach called the "courseware team concept" to effectively merge content and video production expertise in television programming. To encourage involvement and participation by the entire staff in the production

of a television series, a system was designed to avoid an assembly-line process but yet create an atmosphere conducive to open discussion and the exchange of ideas. The courseware team avoided isolation and separation of content in script writing and program execution by combining educators, writers, and television directors into teams charged with meeting the project objectives. This method of programming was highly accepted by the student audience. Two flow charts illustrating personnel and programming are included. (Author/DS)

Identifiers—J Series, \*Satellite Technology Demonstration, STD

The Program Component of the Satellite Technology Demonstration (STD) developed the programming for a television series on career planning for junior high school students. A program called "Time Out" was designed, developed, and implemented to be broadcast throughout the Rocky Mountain States. A staff of educators and communicators developed a career education structure that incorporated all relevant field data on user needs. The courseware-team approach was used in which educators, scriptwriters, and television directors work together to create the best possible end product. Objectives stressed decision-making, self-assessment, and career exploration. Appendixes contain the 103 objectives developed for the original programming structure, the revised programming structure, and the "J-Series" broadcast schedule. (Author/DS)

Identifiers—\*Satellite Technology Demonstration, STD

To implement a career education program for junior high school students in the rural, isolated areas of the Rocky Mountain States, Satellite Technology Demonstration (STD) tested the use of a satellite-assisted communications system for the delivery of social services. A magazine was designed to promote acceptance of the television programming and actively involve the students. A correlated teacher's guide was designed to supplement the STD's educational programming. The magazine and teacher's guide were both pretested in the field and at various sites. Approximately 50 percent of the students at the STD sites rated the magazine good to excellent. Teachers rated the guide as having an average message effectiveness. A flow chart illustrates the designing and writing of supplementary materials. (Author/DS)

Identifiers—\*Satellite Technology Demonstration

The "Time Out" series designed by the Satellite Technology Demonstration (STD) used a variety of formats, vehicles, and characters to explain career concepts to junior high school students. A science fiction set with a futuristic approach, called the Time Control Center (TCC) used vehicles to move forward and backward in time to access a computer for information on making career decision. The TCC crew members were characters who were career specialists. Characters were also used with the Matter Analogue Projector (MAP), a futuristic machine used to project a person's mental image on a screen. The STD demonstrated the possibility of developing formats and vehicles that would be acceptable to junior high school students; however it was concluded that more investigation should be done to improve television programming. Evaluation of the field testing is shown in statistical tables. (Author/DS)

Library Performance Measures as Seen in the Descriptive Statistics Generated by a Computer Managed Circulation System.

Pub Date 5 Sep 75

Note—74p.

**EDRS Price MF-\$0.76 HC-\$3.32 Plus Postage**  
 Descriptors—College Libraries, Computer Oriented Programs, Data Collection, Library Administration, \*Library Automation, \*Library Circulation, Library Planning, \*Management Information Systems, On Line Systems, \*Performance Criteria, \*Statistical Data, University Libraries

A study was conducted to inventory and describe the quantitative performance measures of an academic library system which originate as a result of the activities at an automated loan desk. Visits were made to 24 academic libraries whose experience in library automation ranged from the completely on-line system with user self service and in-house computer to the wholly batch oriented system. It was concluded that with the exception of a few outstanding examples, there is little sophistication in the collection, manipulation, or use of the statistical management data now being produced by computer automated circulation systems for the support of library planning/operational functions. Libraries need to exploit the work already done on quantitative performance measures in both business and higher education. (Author/PP)

**Identifiers**—\*Elementary Secondary Education Act Title IV B, ESEA Title IV B

The Bureau of School Libraries of the New York State Education Department presents a planning guide for participation in Title IV-B of the 1974 Elementary and Secondary Education Act which provides grants for school library materials, other instructional materials, equipment and minor remodeling for its use, and testing and guidance services. The guide covers filing applications, fund distribution, planning and procedures, eligible and ineligible expenditures, selection of materials and equipment, administration of items acquired under IV-B, participation of private school children, project evaluation, and fiscal guidelines. Standards are provided for educational programs in 6 subject fields as well as for counseling and guidance services and school library media programs. (LS)

Cooperative Program Tape Networks in Noncommercial Radio.

Pub Date Dec 75

Note—94p.

**EDRS Price MF-\$0.76 HC-\$4.43 Plus Postage**

**Descriptors**—\*Cooperative Programs, \*Educational Radio, Higher Education, \*Programming (Broadcast), \*Questionnaires, Shared Services, Statistical Data, Tables (Data)

**Identifiers**—Cooperative Program Tape Networks

Over 200 noncommercial radio stations responded to a survey to gather data on the characteristics of member stations and to sample the opinion of nonmembers toward a cooperative network concept. A second survey of 18 networks sought to gather indepth information on network operation. Results showed that 22.2 percent of the stations surveyed were participating in program cooperatives, and over 79 percent felt that network participation would be beneficial. It was concluded that the cooperative program tape network should continue in order to fulfill specialized programming needs. A copy of the two questionnaires, the letter of transmittal, and the mailing list is appended. A list of the networks that participated in the study, 12 statistical tables, and a 20-item bibliography are included. (Author/DS)

Workshop on the Transition to a Conserver Society: The Role of the Media (March 21-23, 1974)

Ontario Educational Communications Authority, Toronto.

Pub Date Mar 74

Note—30p.

**EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage**

**Descriptors**—\*Conference Reports, \*Conservation Education, \*Environmental Education, Futures (of Society), \*Instructional Media, \*Media Selection, Media Specialists, Technological Advancement, World Affairs

**Identifiers**—\*Ontario Educational Communications Authority

In March of 1974, a conference was held to advise the Ontario Educational Communications Authority (OECA) on the nature of future global problems (energy use, population growth, economic and technological expansion). Participants were asked to examine conflicting interpretations of these problems and the assumptions on which the viewpoints are based, and to debate the role of educational media in shaping future world opinion. Participants were first asked to define areas of convergence and divergence in their own opinions and then to reflect on the following questions: whether the educational media should be subordinate to, an observer of, or a catalyst for world opinion; and whether the media has an obligation to show models of optimal use of world resources. Finally the group was asked to make recommendations for the future policies of the OECA. (EMH)

Micrographic Systems.

National Microfilm Association, Silver Spring, Md.

Pub Date 75

Note—228p.

Available from—The National Micrographics Association, 8728 Colesville Road, Silver Spring, Maryland 20910 (\$16.50 to nonmembers; \$12.50 for members)

**Document Not Available from EDRS**

**Descriptors**—Ancillary Services, \*Computer Output Microfilm, \*Information Retrieval, Libraries, Library Automation, \*Library Collections, Library Facilities, Library Material Selection, Library Services, Library Standards, Manuals, Microfiche, Microfilm, Microform Reader Printers, Microform Readers, Microforms, \*Microreproduction, Statistical Data, Tables (Data)

**Identifiers**—\*Micrographic Systems

The micrographic system utilizes microimaging in the areas of space saving, reproducibility, durability, file integrity, and automated retrieval. This manual about micrographics is organized into 10 chapters, each covers a major facet of the system. The first chapters cover the basics of the system: objectives, classification, searching and retrieval, and standards. Utilization, selection, and systems design are covered in the remaining chapters. Appendixes include a glossary of micrographics terms, English/Metric conversion tables, and published standards by category. Over 60 figures include photographs, flowcharts, microcopy resolution test charts, and facility requirements. (DS)

Opening Higher Education with Telecommunications; A Report Submitted to the Board of Higher Education, Commonwealth of Massachusetts.

Massachusetts Univ., Amherst.

Spons Agency—Massachusetts State Board of Higher Education, Boston.

Pub Date 30 Nov 74

Note—426p.

**EDRS Price MF-\$0.76 HC-\$22.21 Plus Postage**

**Descriptors**—\*Adult Education, Closed Circuit Television, Educationally Disadvantaged, \*Educational Television, \*Feasibility Studies, Fixed Service Television, \*Higher Education, Open Education, Outreach Programs, Statistical Data, Tables (Data), \*Telecommunication, Urban Education

**Identifiers**—\*Massachusetts

The use of telecommunications was studied as a means of making higher education more accessible to urban disadvantaged adults by using a statewide, closed-circuit, instructional telecommunications network. A comprehensive review was made of telecommunications in higher education, the learning needs and styles of urban disadvantaged adults, and the alternative modes of telecommunications and their applications. It was recommended that the Commonwealth of Massachusetts should not establish a state-wide closed-circuit instructional television system, but

should consider the use of broadcast facilities to broaden access; videotape or instructional television, fixed service (ITS) systems, and neighborhood learning centers would help make education accessible to disadvantaged adults. Appendixes include the research reports, consultant reports, a design for a neighborhood learning center, brochures, and a bibliography of over 100 items. Figures include maps of the areas and statistical data. (Author/DS)

 Descriptors—Audiences, Career Education, Citizen Participation, \*Communication Satellites, Community Role, Delivery Systems, \*Demonstration Projects, Educational Radio, \*Educational Television, Experimental Programs, Inservice Programs, Program Evaluation, Programming (Broadcast), Regional Programs, \*Rural Education, \*Telecommunication

Identifiers—\*Satellite Technology Demonstration  
 The Federation of Rocky Mountain States and the Satellite Technology Demonstration project (STD) have collaborated in an effort to provide low cost information delivery to rural areas of the Rockies. Though the goals and the financial support of this joint effort were initially confused, sites have now been selected, the communications technology has been refined, and services have been stabilized. New satellite technology has made quality reception possible with low-cost ground receivers, and the technical performance of the system in its initial years has been good. "Time Out"—a career education program for junior high school students—and "Footprint"—a series of community-oriented programs—have enjoyed high audience response, and substantial gains in student knowledge have been recorded. Programs are enhanced by supplementary publications and audiovisual aids, and the system provides an interactive mode whereby students can ask questions and make comments about the programs. A brief review of the program's financial support is included. (EMH)

 Identifiers—Appalachian Educational Satellite Project, Federation of Rocky Mountain States, Health Education Telecommunications Experiment, \*Satellite Technology Demonstration

The goal of the Satellite Technology Demonstration project (STD) was to show the feasibility of a satellite-based media system for isolated, rural populations and to test and evaluate user acceptance and the cost of various delivery modes using a variety of materials. The STD amalgamated the resources of government, health, education, and broadcasting organizations and produced such programs as: "Time Out"—a career education course for junior high school students—"Careers and the Classroom: A New Perspective for Teacher"—an inservice program for teachers in the curriculum of career education, and "Footprints"—a series of community-oriented evening programs. The technical performance of the satellite and the network of inexpensive ground terminals which serve 23 states has exceeded design requirements. In this report, objectives, planning and development, and results are extensively discussed, and a project evaluation considers hardware performance, program acceptance, student learning gains, and costs. Resulting from a project to systematically locate existing information resources useful in the development of training courses or programs, this catalog describes 31 of the most relevant information resources. These resources include abstracting services, computer files, directories, exchange projects, books, and information services. The catalog descriptions provide substantive data on the nature, purpose, and use of each information resource, and are intended to permit an assessment of their potential applicability to a given information need. Informal evaluations relative to the objectives of the project are included. The resources are indexed by applicability to a five-level classification of the instructional development process. Identifiers—\*Eastern Michigan University  
 With help from the Council on Library Resources and the National Endowment for the Humanities, a five-year Library Outreach Orientation Program was instituted at Eastern Michigan University. Through intensive contacts between the orientation librarian and faculty members in the humanities and social sciences, library sessions were set up during academic class periods to help students learn about resources and search strategies relevant to their current assignments. The program also included an elective library instruction course, production of a slide-tape for group and individual use, contact with student groups, campus publicity, and the initiation, in 1971, of annual conferences on library orientation for academic libraries. Questionnaires administered to both faculty and students elicited enough positive response to continue the program on university funds after the grant period ended. Appendixes, which make up the major part of the document, contain the proposal, staffing information, statistics, questionnaire results, library guides, and lists and examples of the special subject area guides used in the program.  Descriptors—\*Bookmobiles, Cost Effectiveness, County Libraries, Feasibility Studies, Fines (Penalties), Library Circulation, Library Collections, Library Research, Library Services, \*Paperback Books, \*Public Libraries

Identifiers—\*Oklahoma (Oklahoma County)

The Oklahoma County (Oklahoma) Library executed a six-month experiment in 1974 on one of its five bookmobiles to determine whether: (1) patrons would accept a primarily paperback book collection; (2) the cost of unreturned paperback books in a no-fine and no-overdue-notice situation would be cost-effective when compared to the predictable loss of hardbound books and the resulting cost; (3) a category-arranged collection (rather than a cataloged one) would prove useful and acceptable to patrons. Paperbacks were proven to be even more acceptable than hardbacks, except that patrons did want access to bestsellers available only in hardback. In spite of a higher number of books unreturned, the dollar loss per 100 circulation was lowered by the use of paperback books. It was considered practical, however, to send overdue notices to those with a large number of unreturned books. A circulation study showed that the categorical arrangement appeared to be acceptable to patrons, but some redesign of the topical categories should be considered. The success of the experiment led to use of the same system on the other four bookmobiles. (LS)

Identifiers—\*Ontario Educational Communications Authority

In 1974, the Ontario Educational Communications Authority (OECA) undertook a study to measure the feasibility of loaning video tape recording equipment and video tapes to home users. A pilot program in one branch library found that, with the assistance of a video instruction package and an instructional booklet, users quickly mastered the operation of the apparatus, and they required very little assistance from the librarian. Questionnaires and observations made by the library staff showed that the instructional

experience set up by the library was well received, and little technical difficulty was experienced, but additional publicity will be necessary to promote the use of the equipment by a broader public. The appendixes of this document include the project design, questionnaires, the instructional booklet, and a collection of personal views on the effectiveness of the program. (EMH)

This hard cover manual annotates 270 selected published lists of audiovisual and other instructional media. Section I covers comprehensive lists. Section II covers lists by subjects as taught in grades K-12. Science, social studies, ethnic groups, and vocational education have detailed subdivisions. Section III is arranged by media in the areas of audio records, film loops, filmstrips, free and inexpensive publications, government publications, graphic materials, kits, manipulative materials, maps, microforms, simulation games, slides, television, transparencies, and video recordings. Each entry contains the following information: classification, full bibliographic citation purpose, grade level, arrangement, subjects, entries, type of index provided, period covered, revision and updating, media represented, producers represented, features, and subject terms. The manual is indexed by subject, media, instructional levels, and title. (NR)

Descriptors—\*Computer Assisted Instruction, \*Curriculum Research, \*Educational Strategies, Electronics, Experimental Programs, \*Experimental Teaching, Instructional Design, Learning Theories, Programmed Instruction, Task Analysis, Trigonometry

Identifiers—\*Wollmer Markov Model

Two computer-assisted instruction programs were written in electronics and trigonometry to test the Wollmer Markov Model for optimizing hierarchical learning; calibration samples totalling 110 students completed these programs. Since the model postulated that transfer effects would be a function of the amount of practice, half of the students were required to complete one practice problem successfully before moving on to the next stage; the other half had to do two practice problems successfully. All students completed the courses successfully; students who had one success at each stage did about as well as those who had two successes. The Wollmer was thus not suitable for optimizing instruction, in terms of minimizing overall time, in the particular courses. Perhaps the main reason for this result was that, as the student works up to the top of the hierarchy, the sheer number of subskills involved in the final task becomes a major determinant of the practice time, and the number of practice trials has a relatively minor effect, unless a large number of practice trials are given. **Personalizing Instruction for the Middle School Learner: The Instructional Role of the School Media Specialist. Final Report.**

Florida State Univ., Tallahassee. Career Education Center.

Pub Date 27 Aug 75

Note—72p.

EDRS Price MF-\$0.76 HC-\$3.32 Plus Postage

Descriptors—Educational Research, Grade 8, \*Individualized Instruction, Learning Processes, \*Media Specialists, \*Middle Schools, \*Multimedia Instruction, Role Perception, Teaching Models, Teaching Techniques

Identifiers—Florida, \*Fort Clarke Middle School

An investigation was made to determine the instructional function of the professional media staff in a school. The objectives of the study were: (1) to develop a model to add the expertise of the media specialist to the teaching team; (2) to access the effect the model had on the academic achievement and self-concept of students; and (3) to determine the effect the model had on the attitudes and instructional performance of educators. The study was divided into five parts. Part 1 developed a rationale for making the expertise of the media specialist available to the teaching team, and part 2 introduced the theoretical model of the instructional function of the media specialist. Part 3 dealt with the implementation of the theoretical model at Fort Clarke Middle School in Gainesville, Florida, and part 4 examined the evaluation information emerging from the project. Finally, part 5 summarized the conclusions and recommendations that grew out of the investigation. (Author/HB)

**Self-Paced Approach to the Organic Chemistry Laboratory.**

Pub Date Aug 75

Note—9p.; Paper presented at the Annual Meeting of the American Chemical Society (Chicago, Illinois, August 1975)

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—\*Chemistry Instruction, \*College Curriculum, College Students, Curriculum Development, Educational Television, Higher Education, \*Individualized Curriculum, Individualized Instruction, Laboratory Experiments, Laboratory Procedures, \*Laboratory Techniques, Organic Chemistry, \*Video Cassette Systems

As part of an experiment, a three quarter sequence in organic chemistry was designed to be accompanied by laboratory experiments that reinforce the lecture material and encourage independent investigation by minimizing cookbook-style procedures. By having laboratory techniques explained in detail on video cassettes, students were exposed to uniform instruction; they proceeded at their own pace, and they were encouraged to use an inquiry mode of investigation. An evaluation of the experiment based on a sample of students' written comments revealed that students overcame their initial resentment toward the extra time required in the laboratory, and they grew to appreciate the independence and dexterity they acquired by designing and performing their own experiments. An outline of the curriculum is included. (EMH)

Identifiers—Columbia Broadcasting System, Library of Congress, Metro Goldwyn Mayer, National Archives, \*National Iranian Radio and Television, Universal Studios

In response to a request by the National Iranian Radio and Television (NIRT), a study was conducted to see what types of film and video archives presently exist. Archives can be classified into three types: (1) production archives used as resources in the making of other films and tapes, (2) film studio archives used to store prints for future reproduction, and (3) scholarly archives where films of historical interest are housed. The media collections at the National Broadcasting Corporation, Universal Studios, Metro-Goldwyn-Mayer, the National Archives, and the Library of Congress were visited and examined with specific reference to the temperature and humidity of their storage facilities, the basis of collection, cataloging, retrieving, and the number of personnel. To further assist NIRT, the Educational Resources Information Center (ERIC) prepared an annotated bibliography about media archives and supplied details about its own computer-based information processing service. Appendixes include: (1) an outline of a Tymshare retrieval system for films and film transcripts, (2) an annotated bibliography on media storage and retrieval, and (3) instructions and price information for the ordering of ERIC services. **Television in South Africa: The Research Paradox, Problem and Potential.**

Spons Agency—National Science Foundation, Washington, D.C.

Pub Date Sep 72

Note—25p.

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—\*Communications, \*Cultural Factors, Developed Nations, Research Needs, Research Problems, \*Socialization, \*Television, \*Television Research

Identifiers—\*South Africa

South Africa, the last urban, industrial, Western-culture society without television, called for television introduction on January 1, 1976. Thus, South Africa represented the last chance to explore certain research questions about the impact of television in modern societies. A study was made of: (1) factors in the South African context which make research easy or difficult, (2) current plans for the introduction of television in South Africa, (3) the current research plans and capabilities of South African scientists, (4) research which should be done in the light of experience in other Western societies, and (5) steps which might be taken to facilitate necessary research. College-level instructional programs using a variety of media and aimed at adults pursuing degrees, specialized knowledge, or enrichment are described. The types of programs covered are: (1) learning programs which use a combination of various technologies, such as a text, study guide, audiocassettes, television programs, newspaper features, learning centers, Wide Area Telephone Service (WATS) lines, and reading lists; (2) programs which utilize mainly television lectures, supported by audio communication beamed to a specialized audience; (3) programs which employ public television, mail, and newspapers to reach a more heterogeneous audience; (4) programs which feature independent home study by correspondence alone, perhaps supported by local resource facilities, audiocassettes, a WATS line, or by minimal campus attendance; and (5) programs created by certain public libraries which outline a special independent learning project, select related educational materials, and provide support conferences. A 10-page annotated bibliography provides information on additional programs. (NR)

**Identifiers**—California, \*California Library Association, CLA 75

The first American Library Association convention west of the Mississippi, held in 1891 in San Francisco, generated an interest in forming a California association. Then in 1895 a meeting of representatives of eight northern California libraries was called, and the California Library Association (CLA) was born. The five main areas of concern to the early CLA were the development of traveling libraries and interlibrary loan within the state, the need for a state library training school in California, and the need for additional copyright depositories including one in California. Meetings held during the first decade covered those subjects as well as book selection, the ideal librarian, women serving in public libraries, book publishing and selling in California, and children's literature. Library Services, Library Standards, Personnel Needs, \*Public Libraries, School Libraries, Use Studies

**Identifiers**—\*New York (Baldwinsville), New York (Lysander), School Public Libraries

A study was made of the Baldwinsville (New York) public library and nearby developing areas, including the Lysander New Community, in order to discover current and future library service needs and to make recommendations for meeting those needs. Existing data, library statistics, and a survey were used to analyze the library and its community. The library was found to have inadequate funding, facilities, services, and personnel to meet the needs of the community. Recommendations were: (1) to recharter the library as a school district public library; (2) to ask voters for a \$50,000 budget for 1974; (3) to increase space immediately, with the ultimate goal of three new facilities; (4) to expand the collection toward a goal of 100,000 by 1982; (5) to increase staff; (6) to increase services to adults; (7) to coordinate services to children with the schools; and (8) to develop an experimental information center at a branch library in Lysander. Scattered throughout the text are 42 tables and figures showing demographic information, library data, and results of a user survey. (LS)

**Research on the History of the American Library Association.**

Pub Date 30 Jun 75

Note—11p.; Paper presented at the Annual Meeting of the American Library Association (94th, San Francisco, California, June 29-July 5, 1975)

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

**Descriptors**—\*History, \*Library Associations, Library Research, Organizational Development, Organizational Effectiveness, Research Needs, Speeches, Trend Analysis

**Identifiers**—ALA 75, \*American Library Association

A researcher on the history of the American Library Association (ALA) describes problems encountered on his project, important trends in ALA, weaknesses and benefits of ALA, and needs in the area of historical research. Some of the problems cited are the inadequacy of organization and housing of the ALA archives, the unevenness of the archival materials, the researcher's status as an outsider, and lack of access to documents between 1958 and 1972. Among the current trends are: (1) unhappiness in the divisions related to ALA's tendency to be less responsive toward individuals; (2) greater concern with bread and butter issues; and (3) centralization of power in the hands of a few, generally establishment-oriented, individuals. Also cited are the weakness of ALA in the areas of democratic organization, library education, influence on the selection of Librarians of Congress, and publications. Benefits include ALA's role in raising the status of librarianship, pursuing foreign activities, and backing the concept of intellectual freedom. A need is seen for historical research in greater depth which may be pursued in dissertations, journal articles, and oral history projects. (LS)

**Document Retrieval Systems; Factors Affecting Search Time.**

Pub Date Jul 75

Note—144p.; Books in Library and Information Science, Volume 14

Available from—Marcel Dekker, Inc., 270 Madison Avenue, New York, New York 10016 (\$12.75)

**Document Not Available from EDRS**

**Descriptors**—Comparative Analysis, \*Filing, \*Information Retrieval, \*Information Storage, Information Systems, Research, \*Search Strategies, Tables (Data)

**Identifiers**—Inverted Files, Linear Files

An experiment was conducted to identify some of the important parameters affecting search time, a critical cost factor in retrieval systems. Using actual computer searches of Chemical Abstracts Condensate, a comparison was made between the effectiveness of linear and inverted filing systems. Since the results indicated that it was the type and number of questions which determined which filing system was most practical, it was hypothesized that the optimal retrieval system would incorporate both linear and inverted files and would include a program to determine which filing system would facilitate the fastest search. Contained in the text are reviews of relevant literature, a detailed description of the experiment, and tabular data to support the analysis. (EMH)

**Identifiers**—BLM, Bureau of Land Management, Department of the Interior Library, Montana State Office, MSO

The purpose of the Resources Development Internship Project was to catalog the collection of the U.S. Bureau of Land Management Montana

State Office (MSO) library, which consisted of approximately 1,400 volumes of diverse library materials. Other objectives were to improve access to the materials, and develop a general system of library operation including maintenance of the collection and services to MSO and District personnel. Development of services involved interviewing selected MSO personnel in order to determine their library needs, developing a loan system for the District offices, contacting area libraries and the Department of the Interior Library in Washington, D.C., in order to extend their services to the MSO, and improving on the content of the collection. The written product of the project consisted of procedure manuals for the upkeep of the library, user guidelines for both MSO and District personnel, a library director, policy statements, and recommendations for further library growth and development. Identifiers—Kansas (Emporia), Kansas State College School of Library Science

During the fall term of 1975, an experimental course was offered at the School of Library Science, Emporia Kansas State College. The objective was to review the general principles of interpersonal relations and to apply them to case studies involving library staff and patrons. Using a brief reading list and a case study approach, students were expected to become familiar with the relevant literature, to reflect on their own behavior, and to internalize techniques for effective interpersonal relations. A systems approach was used, but it was observed that students experienced difficulty internalizing the principles that were introduced. (EMH)

Note—17p.; Paper presented at the Annual Meeting of the National Association of Educational Broadcasters (Washington, D.C., November 15-19, 1975)

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**  
Descriptors—Educational Television, \*Health Education, Outreach Programs, \*Programming (Broadcast), \*Public Health, \*Public Television, Speeches  
Identifiers—Feeling Good

Having witnessed the success of public broadcasting series such as "Sesame Street," public health officials began to work toward the creation of a new series concerning health and aimed at a prime time, adult audience. A feasibility study showed that there was a potential audience, and discussion then focused on the topics and format which would most appeal to the public. "Feeling Good," a pilot series using a variety show format, was created and broadcast, but mixed reviews and only marginally successful ratings suggested that the program be abbreviated to half an hour and that the program contain less frivolity and more informative documentary. After modifications and with increased support from the Public Broadcasting System, "Feeling Good" returned to the air to receive good reviews and positive audience response. (EMH)

Identifiers—\*National Association of Public Broadcasters

At the 1970 National Association of Educational Broadcasters convention, a minority affairs report showed that, although minorities constituted nearly 10 percent of public broadcasting employees, there was almost no minority representation at the management and professional levels. Recent statistics show little change in those employment practices. Programs should be initiated to train minority group members to assume future open positions that are projected in a 10-year industry needs study. Minorities should prepare themselves for leadership and ownership of all phases of the telecommunications industry. Federal agencies should be monitored to insure compliance with equal opportunity employment practices, and the talents of minorities should be specifically applied to designing and developing telecommunications systems to service disadvantaged communities. (EMH)

Descriptors—\*Acting, \*Course Descriptions, Curriculum Development, Drama, Dramatics, Higher Education, \*Production Techniques, Professional Education, Reading Materials, \*Television, Theater Arts

Directing and acting in television productions requires a broad technical background that differs greatly from stage productions. In addition to understanding the technical problems that are unique to television, the director and actor must be deft at script analysis, character development,

and mood setting. To assist the aspiring director and actor to master these technical and artistic skills, two courses have been designed. The first, in advanced television directing, concentrates on the role of the director in script interpretations and dramatic visual effects. The second course concentrates on the basic principles of television acting with emphases on character development and acting techniques to represent different emotions. Each course includes a statement of objectives, an outline of daily lesson plans, and a reading list. (EMH)

Descriptors—\*Audiences, Pilot Projects, \*Programming (Broadcast), \*Public Television, Speeches, \*Television Research, \*Television Surveys, Viewing Time  
Identifiers—Corporation for Public Broadcasting, Public Broadcasting System

A recent broadcast on the Public Broadcasting System (PBS) entitled "The Incredible Machine" showed that public television is capable of reaching a large audience. To further explore its potential to reach larger audiences, PBS has subscribed to public opinion polls to become more systematically aware of wants, desires, needs, and dreams of their viewing audiences. A second kind of research that should be conducted would be to develop pilot programs and to have the programs evaluated by their intended target audiences. Since each local station has its own audience, it is necessary that surveys be taken at the local level and that stations become accountable to their local audiences. Also, further research is needed to discern the effect of cable television on the popularity of PBS programming. (EMH)

Identifiers—\*McLuhan (Marshall)

Marshall McLuhan's thesis that the "media is the message" can be criticized from two perspectives: that communication can be divided into content and media, and that media is the element that most affects human consciousness. The weight of numerous illustrations are to the contrary. Furthermore, the assertion is so broad that

there is no way to prove its validity. To focus on a single variable (media) to explain the state of human consciousness ignores the multitude of other variables that are at work. McLuhan's second error is one of omission. He fails to understand the gravity of language in affecting communications. By comparison, the effects of media are only trivial. (EMH)

Descriptors—Contrast, Production Techniques, \*Research Needs, \*Television, Television Lighting, \*Television Research, \*Visual Perception

Little research has been conducted into the structure of television images. This structure merits examination in terms of its perceptual psychology, composition (light, color, form, placement, sound, and editing), and the aesthetics of motion field forces theory asserts that there are differences between a real scenario and its representation on television and that these differences should be analyzed in terms of orientation, aspect ratio, direction of movement, symmetry, proportion, and balance. Several key questions of perception demand further research: (1) placement within the television field; (2) boundaries of the screen; and (3) the contrast between the subject and its background. The results of future research could profoundly affect techniques in lighting, staging, and space manipulation. (EMH)

Descriptors—\*Confidentiality, \*Data Collection, \*Electronic Data Processing, \*Information Processing, Information Systems, Legislators, Speeches, \*State Legislation

Identifiers—\*California, Privacy

In the face of more sophisticated data collection technology, California voters have demonstrated an increasing concern about their own privacy. In response, Assemblyman Cullen has proposed a bill to the state legislature which would require anyone opening an automated information system to send notice to the Secretary of State. This notice would include an identification of the system, its purposes, the category of the subjects, the category of information, the recipients of the data, and the intended use of the data. In addition, at the time of collection, the subject must be informed of the purpose for which the data is being collected. Any subject would be able to review his record and dispute any data, and data may not be released for unauthorized uses without the permission of the subject. Criminal penalties are specified for individuals who violate the code. (EMH)

Descriptors—Audiovisual Aids, Films, Photography, Primary Education, Student Motivation, \*Visual Learning, \*Visual Literacy

Visual literacy has been a function of human experience since the cave dwellers first created wall paintings. The contemporary definition of visual literacy extends literacy to include all the connotations of the word visual and encompasses perceptions developed from visual experience. The use of visual symbols together with written language symbols can strengthen the student's concept and thereby motivate him. It is important that the student have the opportunity to discover the enjoyment of learning with pictures he has taken himself with a camera. Three schools are listed that have existing visual literacy programs. Twenty-nine research references and a 13-item bibliography are included. (Author/DS)

Identifiers—\*Dedicated Coaxial Cable Networks, Missouri (Saint Louis), PLATO, TICCIT

As companion to the more general document Telecommunications Media for the Delivery of Educational Programming, this report concentrates on the technical and economic factors affecting the design of only one class of educational networks, dedicated coaxial cable systems. To provide illustrations, possible single and dual dedicated cable networks are considered as ways to deliver educational services to selected institutions in the St. Louis metropolitan area. The networks described have the capacity to simultaneously distribute 35 forward and eight return channels. Cost estimates, construction techniques, and technical limitations of the systems are discussed in detail. Since user efficiency is a key factor in minimizing the cost of the system, a projection is made for the potential use of the system in the St. Louis area. Extensive appendixes concentrate on the technical functioning of the system. (EMH)

Descriptors—Catalogs, \*Interlibrary Loans, \*Library Circulation, Library Collections, Library Cooperation, Library Surveys, Off Campus Facilities, \*University Libraries, \*Use Studies

Identifiers—University of California Berkeley, University of California Los Angeles

A study measured the extent of bibliographic access available to off-campus users for the resources of the libraries of the University of California campuses at Berkeley (UC) and at Los Angeles (UCLA). Random samples of bibliographic items were drawn from card catalogs on both campuses, with each sample representative of the resources of both the general library systems and most of the unaffiliated campus libraries. Major printed catalogs which contained a significant number of records for materials on these campuses were checked to see if each sample item was identified with the campus from which it was drawn. A maximum of 67.2 percent of the UC sample and 69.5 percent of the UCLA sample were found to be bibliographically accessible through available printed catalogs. The maximum possible net off-campus bibliographical and physical access to the total library resources, based on the compound factors of bibliographical access, interlibrary loan policy, and physical availability in inventory, appears to be about 54.2 percent for the UC campus and, based on the factors of bibliographic access and interlibrary loan policy, about 59.6 percent for the UCLA campus. Identifiers—Navy

The major objective of this survey research project was to estimate the Navy recruitment potential of male, junior college students. The results of a national survey of 807 students that a promising recruitment market exists for officer and enlisted recruiting, including both the active force and the Reserve. A second objective was to determine if the enlistment potential of male, college students varies in terms of common demographic characteristics such as age, education, race, family income, mental ability, etc. There were very few instances of demographic variables being related to enlisted potential or officer potential. A final objective was to determine the relative preference of male, junior college students with respect to alternative recruitment strategies. This involved the evaluation of preferred alternative modes of contact, e.g., the recruiter or the various advertising media. Survey findings document the importance of the recruiter, and suggest promising media and appeals which could be employed in recruitment advertising directed to this target market segment. (NTIS)

Descriptors—\*College Faculty, Goal Orientation, Humanities, \*Humanities Instruction, Job Satisfaction, \*Junior Colleges, \*National Surveys, Personal Values, Research Design, \*Research Methodology, Statistical Studies, Teacher Attitudes, Teacher Background

This report presents the responses (in percentages) to each questionnaire item of a national survey of humanities faculty in two-year colleges. The data are preceded by a description of the procedure used for sampling humanities faculty, and a control group of department and division chairmen outside the humanities, in 156 two-year colleges. It outlines the controls used to ensure the representativeness of the sample and the pilot testing procedures used to find the best procedure for obtaining a high response rate. A total of 1,493 faculty (84 percent) responded to the 11 page questionnaire asking their opinions and attitudes on a variety of personal and professional matters. The college sample was stratified so that the 1,177 two-year institutions in America were represented proportionately according to type of control (public or private), geographic locale, emphasis (comprehensive, technological, liberal arts), organization (multi- or single-campus district), size, and age. The faculty sample included a random one-half of all full-time and part-time instructors who taught one or more humanities courses in these colleges in spring 1975. (Author/RL)

Descriptors—\*Academic Achievement, Instructional Improvement, \*Junior Colleges, \*Low Ability Students, \*Performance Based Education, Program Descriptions, \*Teaching Methods

Identifiers—\*Mastery Learning, Olive Harvey College

This paper describes the implementation of a Mastery Learning approach to instruction at Olive-Harvey College (OHC) in Chicago, and outlines planning and operating procedures for its implementation at other institutions. This approach was attempted at OHC as a response to the decreasing abilities of entering students, after many other innovative techniques had been tried with limited success. The Mastery Learning strategy rested on a foundation of fundamental propositions about learning, and seemed specially in accord with the community college's philosophic emphasis on instruction. The paper describes the development of course objectives, establishment of achievement criteria, definition of learning units and identification of learning elements, and the construction of diagnostic tests and prescriptive remedial materials. In general, the Mastery Learning approach has been judged successful at OHC; although some problems have been encountered, a greater level of achievement has been attained by students in Mastery Learning classes. Mastery Learning has permitted traditional group instruction within the fixed academic calendar. It has not required administrative restructuring, complex instructional hardware, curricular change, or a large budget allocation; thus it lends itself to implementation in many different college situations. (BB)

Descriptors—Administrator Attitudes, Collective Bargaining, College Faculty, Faculty Organizations, Faculty Recruitment, \*Junior Colleges, \*Part Time Teachers, \*Salary Differentials, Teacher Attitudes, Teacher Education, Teacher Qualifications, \*Teacher Welfare, Teaching Load

The number of part-time faculty in the community college has dramatically increased in recent years. The trend to hire more part-time instructors will likely continue, due to the increasing numbers of part-time students, the movement toward off-campus classes in scattered locations, and the growing numbers of unemployed college graduates with teaching majors. Meanwhile, important issues related to part-time faculty are being debated: pay of part-time instructors, the number of day part-time faculty and their ratio to full-time instructors, their inclusion or exclusion as members of the bargaining unit where collective bargaining exists, and their rights and responsibilities in the department and in the college. The author delineates the different perspectives on these issues held by administrators, and full-time and part-time faculty. The present situation is described in the major sections of the paper: definition, number, sources, qualifications, academic preparation, experience, workload, and wage rates of part-time instructors. He concludes

with the implications of these data on the future of community colleges and their staffs. (Author/RL)

This publication is intended to outline basic legal issues in key areas confronting the postsecondary education community, and to provide background information of which every college administrator should be aware. Chapter 1, Some General Thoughts on Postsecondary Education and the Law, discusses the increased activity of courts in campus matters and the complexity of federal law and regulations, focusing on equal employment opportunity. Chapter 2, Legal Liabilities of Administrators and Trustees, discusses criminal, civil, contract, tort and other types of liability, violation of constitutional rights, the doctrines of sovereign immunity, indemnification, and insurance. Chapter 3, Legal Liability of Faculty, presents a general outline of problems, including faculty relationship with the employer-institution, defamation, confidentiality and student records, copyright and patents, research, and safeguards. Chapter 4, Developing a Faculty and Staff Personnel Policy, discusses such considerations as purpose for access to files when creating a personnel records policy, as well as the effect on access of federal, state, and campus law. Chapter 5, The First Amendment Freedoms of Speech, Press, and Association, includes discussion on the scope and application of the First Amendment within the campus environment. (KB)

Identifiers—Hagerstown Junior College

Adjunct (part-time) faculty comprise 35 to 45 percent of the teachers in two-year colleges, yet receive virtually no systematic assistance in professional development. In 1972, Hagerstown Junior College (Maryland) initiated a program of staff development for adjunct faculty to remedy this deficiency. The program is designed to familiarize adjunct faculty with college procedures, to ensure instruction of equal quality with that provided by regular faculty, and to establish a process of communication between adjunct and regular faculty and staff. Based on a systems model, the program consists of four parts: recruitment, input, processes, and output. In the recruitment phase, media advertisement is used to secure qualified applicants. The input phase begins with providing the new instructor with the Adjunct Faculty Handbook, which outlines college policies and regulations. An Adjunct Faculty Workshop attempts to initiate communication processes with division chairpersons and other college personnel. Extended availability of auxiliary services and their professional staffs as

consultants to adjunct faculty during evening hours characterizes the process phase. Evaluation of the output is provided through objective/subjective student and supervisor evaluations of the adjunct faculty member. (BB)

Pub Date 75

Note—178p.

Available from—Praeger Publishers, 111 Fourth Avenue, New York, New York 10003 (\$16.50)

Document Not Available from EDRS

Descriptors—Associate Degrees, \*Curriculum Design, Differentiated Staffs, \*Human Services, Job Analysis, \*Junior Colleges, Models, \*Social Work, Social Workers, \*Subprofessionals, Task Analysis

The distant nature and purposes of social work education programs at different educational levels, which prepare persons for social service roles at different levels of practice, lack systematic and generally acceptable definitions. The newest and least understood direct service practitioners are graduates of community college social work education programs. This study develops and analyzes two current models of human service education and practice at the associate degree level—the Human Services Technician and the Human Services Generalist—in terms of their sources, underlying assumptions, and implications for job roles and tasks and for curriculum design. An alternative conceptual framework is developed, based on the team model of staff differentiation in social work practice, which attempts to capitalize on the strengths and eliminate the weaknesses of the two current formulations. The proposed approach introduces the concept of the specialist to the generalist model; the student moves from depth to breadth, from concrete and specific learning experiences in a vocational core to broader experiences which develop conceptual, analytic, and problem-solving skills through a series of liberal arts electives. An extensive bibliography is appended. (CN)

Descriptors—Community Resources, Educational Needs, Educational Planning, \*Junior Colleges, \*Management by Objectives, \*Management Systems, \*Multicampus Districts, \*School Community Cooperation

Identifiers—California (San Mateo)

In order to identify and respond to a broad range of identifiable needs within the urban-suburban community, an improved community college district management model was developed which combines the management resources of community colleges with the management resources of the multibillion dollar operations of community business, industry, and civic agencies to provide better, more efficient, cost-effective college district management. Emphasis is placed on determining objectives and evaluating progress toward community goals. This document reports on Phase 1, the period of preliminary development. Phase 2, will be a period of refinement, and Phase 3, will be concerned with further validation, indepth analysis of the process, and dissemination of the results. Fourteen different developmental areas are identified, but the bulk of this document is devoted to a series of nine Progress Indicators which include samples of activity such as that from the Chancellors' Round Table, the Collective Bargaining Conference, Master Planning, and the Seminar on Administrative Reorganization. This document is intended as an aid to all multicampus community college districts in their development of improved management systems, and their use of community management resources. (NHM)

**Self-Study Manual for State Governing and Coordinating Boards for Community/Junior Colleges.**

National Council of State Directors of Community-Junior Colleges.

Pub Date Nov 75

Note—25p.

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

Descriptors—Administrative Organization, \*Bibliographies, \*Evaluation Methods, Federal State Relationship, \*Governing Boards, \*Junior Colleges, Legal Responsibility, Management Information Systems, Manuals, \*Self Evaluation, State Boards of Education, State School District Relationship, Statewide Planning

The purpose of this self-study manual is to provide a vehicle to enable state coordinating boards for community-junior colleges and their staffs to conduct an assessment or self-study of their activities, in order to better assess their role in the state's community-junior college system and to identify areas in which changes or improvements are needed. In each of seven areas, suggested steps are outlined. The seven areas are: (1) goals, scope, and legal responsibilities; (2) organization and administration; (3) planning and research; (4) finance; (5) external influences and relations-state and national; (6) relations with constituent institutions within the system; and (7) management information systems. A selected recent bibliography of 116 references to books, book chapters, and journal articles on state governing and coordinating boards for community-junior colleges is included for indepth review of particular phases of board operations. **Personalizing Learning Processes.**

Pub Date [75]

Note—9p.; Paper presented at the Annual Meeting of the American Association of Community and Junior Colleges (Seattle, Washington, April 13-16, 1975)

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

Descriptors—College Faculty, Humanistic Education, \*Junior Colleges, Junior College Students, Learning Modalities, \*Learning Processes, Personal Growth, \*Personality Assessment, Personality Development, Personality Tests, Personality Theories, \*Self Concept, \*Teaching Styles

Identifiers—Jungian Theory, MBTI, \*Myers Briggs Type Indicator

The growth of interest in personalized learning, which emphasizes the realization and development of the self-concept in the learning process, prompted educators to combine the Jungian psychological theories of Perceiving and Judging with the personality types measured by the Myers-Briggs Type Indicator (MBTI) to form a model for veiwng community college instructors and students. A sample of 354 full-time community college teachers and 335 first-term community college freshmen were compared within this framework. The most significant difference between the teacher and student typologies was in Sensing (a person values the immediate realities of direct experience) versus Intuition (one prefers the inferred meanings, relationships and possibilities of experience), with the students scoring high on Sensing and Judging, teachers high on Intuition and Perception. These types learn in different ways: Sensing in a systematic manner using primarily the five senses, and Intuiting in a flexible manner relying heavily on language. This basic mismatch between the preferred learning and teaching styles of students and teachers, which may be characteristic in community colleges, can be corrected by the use of self-concept theory, which will play a key role in making education a humanizing process. **Reality Therapy and Personalized Instruction: A Success Story.**

Pub Date [73]

Note—12p.

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

Descriptors—Academic Achievement, \*Counseling, \*Developmental Programs, Dropout Rate, Educationally Disadvantaged, \*Individualized Programs, \*Junior Colleges, \*Locus of Control,

Remedial Programs, Student Centered Curriculum, Teaching Methods

Identifiers—\*Reality Therapy, Southeastern Community College

The Advanced Studies Program (ASP) at Southeastern Community College (Whiteville, North Carolina) is a developmental studies program that offers freshman courses in English, biology, and psychology to approximately 75 students. Learning activities are individualized and self-paced, and each ASP course has behaviorally stated objectives. Instructional techniques include the use of self-instructional packages, programmed materials, and various audio-tutorial aids. Through these individually styled instructional components, and reality-based counseling strategies, ASP attempts to internalize the external orientations of nontraditional students, thus greatly enhancing their chances of academic success. Rotter's Locus of Control Scale was administered to 77 freshmen prior to ASP enrollment. These students were given the scale again at the end of the first and third quarters. Of the 77 students entering ASP, 60 completed the spring quarter (77.9 percent). This persistence rate is higher than those reported by Monroe (1972) for community college students in general. Control orientation for ASP students generally shifted toward greater internality, and grade point averages improved with gains in internality. Recommendations are made for further research, and a bibliography is appended. (NHM)

Identifiers—\*British Columbia, Impact Studies

This document provides an overview and summary of the findings of 14 separate studies conducted as part of a project to evaluate the impact of the nine British Columbia community colleges with respect to students, the higher education system, and the community at large. In the course of the four-year project, data were gathered on academic ability and achievement, opinions and expectations, and socioeconomic characteristics of first-year students entering postsecondary institutions in British Columbia (community colleges, universities, vocational schools, and a technical institute). Surveys were conducted of all public college faculty and the Grade 12 public school population. Past enrollments, costs, and financing at all postsecondary institutions were analyzed in order to assess the impact of the community colleges on the higher education system. Socioeconomic profiles were constructed of each community supporting a college. The Vancouver area was studied in depth, including followup studies of community college graduates and transfer students, and surveys of the views of residents and the business community toward the community colleges. Maps, tables, and charts are included throughout, and the questionnaires used in the impact study are appended. (BB)

Descriptors—\*Associate Degrees, \*College Majors, \*Educational Certificates, Females, \*General Education, Intellectual Disciplines, Junior Colleges, Males, Statistical Data, Technical Education, \*Vocational Education

The data in this report on associate degrees and completions of occupational curricula and other programs below the baccalaureate level were collected from 1,404 two- and four-year institutions (100 percent response) through part C of the annual Higher Education General Information Survey, Degrees and Other Formal Awards Conferred Between July 1, 1971, and June 30, 1972. Included in this publication are summary data, as well as data for individual institutions on associate degrees and other awards in the following areas: (1) arts and science or general programs not organized as occupational curricula; (2) science-related or engineering-related organized occupational curricula at the technical or semiprofessional level, divided by subject field designation; (3) nonscience-related and nonengineering-related organized occupational curricula at the technical or semiprofessional level, divided by subject field designation; (4) organized occupational curricula below the technical or semiprofessional level. Data are variously organized into voluminous tables by control and level of institution, type and length of curriculum, type of credit and award, sex of student, and state. (Author/NHM)

Guidelines for Personnel Policy Formulation in the Oregon Community Colleges.

Oregon State Board of Education, Salem.

Note—14p.

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—Employer Employee Relationship, \*Employment Practices, Guidelines, \*Junior Colleges, \*Personnel Policy, Policy Formation, State School District Relationship, \*State Standards

Identifiers—Oregon

In order to insure a measure of consistency in the area of personnel relations, while retaining the flexibility necessary to meet local needs, the Oregon Board of Education has published this list of guidelines for personnel policy formulation in the Oregon community colleges. Based on statutory authority, the guidebook outlines required personnel policies, offers suggestions for their formulation, and delegates responsibility for their implementation. The policies include descriptions, amplifications, and guidelines in the following areas: college philosophy; freedom of institution to function; academic freedom and responsibility; organization; policy development and review; internal communication channels; employment practices; terms and conditions of employment; staff development; position description; personnel evaluation; leave of absence; retirement; election and recognition of representation; salary and indirect compensation policy; grievance procedures/appeals; negotiations; responsibility for costs of hearings, mediation, negotiation; and definition of terms. Descriptors—Counseling Programs, \*Junior Colleges, \*Outreach Programs, \*Student Attitudes, Student Characteristics, Tuition Grants, \*Veterans, \*Veterans Education

Identifiers—Washington

In order to compile general data on veterans attending two-year institutions in Washington State, develop educational and employment profiles of the veterans, explore the extent of veterans' knowledge of available benefits, and evaluate the effectiveness of Veterans Outreach programs throughout the state, a questionnaire was designed and administered to 1,315 veterans attending 23 of the 27 Washington community colleges during the spring quarter of 1973. The

average veteran is a male caucasian, 24 to 25 years old, married, with one or two dependents. He entered the U. S. Army at the age of 18 in 1969, served three years of active duty, did not serve in Vietnam, did not receive a service connected disability, and was discharged in 1973. He has acquired 12 years of education, and is taking 15 or more quarter hours in day sessions. He was employed before entry into the service and is now unemployed after holding three or more jobs since his discharge. Although he knew the G. I. Bill existed, he has not used it previously because he did not know how to go about getting it. Before talking to an outreach worker he was unaware that lower tuition and tutorial assistance were available to Vietnam veterans. A review of the literature and bibliography are included, and survey instrument is appended. (Author/NHM)

Instruction at De Anza: A Sampling of Faculty Opinion.

De Anza Coll., Cupertino, Calif.

Pub Date 74

Note—20p.

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—Audiovisual Aids, Behavioral Objectives, \*Educational Strategies, Instructional Design, \*Instructional Improvement, \*Junior Colleges, Student Motivation, Surveys, \*Teacher Attitudes, \*Teaching Methods

Identifiers—De Anza College

In order to identify the instructional techniques instructors have found to be effective in various courses, to obtain their views on other instructional techniques, and to collect suggestions on how instruction can be further improved, a survey was conducted of a representative sample of De Anza College (California) faculty. A questionnaire was sent to each of the 43 participants prior to an interview with a representative of the Institutional Research Office. The diversity of faculty views on the instructional process is attributed to intrinsic differences in subject matter, tradition, differing skills, unexamined assumptions, organizational constraints, and the lack of a common framework for conceptualizing the instructional process. Questions were grouped into four different areas: (1) instructional techniques, including manner of presentation, and audiovisual support; (2) instructional intentions, covering the provision of a statement of course goals, and faculty expectations; (3) motivation, covering requirements satisfied, grading, and course requirements; (4) suggestions for improvement. It is hoped that refinement of the views reported here can be the basis for developing a common framework for conceptualizing the teaching/learning process on which specific improvements can be built. Identifiers—\*Washington

This fifth annual report is intended to provide an accurate and current compilation of enrollment data for the 22 institutions in the Washington community college system. Data are reported in 25 tables, many of which contain historical enrollment data which appeared in earlier reports, with comparable data added for the 1974-75 academic year. Total fall enrollment in 1974 was 146,784, an increase of 6.62 percent from fall 1973, and 455.09 percent from fall 1962, the first year for which data were available. Full-time equivalent (FTE) student enrollment for fall 1974 was 80,203, up 4.44 percent from fall 1973, and 409.58 percent from fall 1962. Total FTE enrollment for the 1974-75 academic year shows 44,453 (53 percent) enrolled in academic programs, 39,302 (46 percent) enrolled in occupational programs, and 679 (1 percent) enrolled in community service programs. Data on program enrollments are further broken down by quarter and individual institution. Data are also provided

for FTE and headcount enrollment by funding source and program type, and the program enrollments of FTE students by academic quarter for each of the last seven academic years are shown. Data on sex, age, residency, credit hour load, source, ethnic background, and educational intent are offered for academic and occupational students enrolled in the fall of 1974. (NHM)

Identifiers—Bronx Community College

This report describes the Bronx Community College (B.C.C.) freshmen class entering in September 1975, in terms of high school grade average and scores on reading-English and mathematics placement tests. As of the fall of 1974, B.C.C. enrolled a markedly higher proportion of students with high school averages below 70 percent than any other college in the City University of New York. On the basis of placement tests, 78 percent of the 1975 class were recommended for at least one remedial course in the reading-English area, and 68 percent were recommended for remedial mathematics. However, only 54 percent of the matriculated students actually enrolled in reading-English remedial courses, and only 29 percent actually enrolled in remedial mathematics courses. The actual programs of students who were placed into, but did not register in, remedial courses is examined. Eight tables show the distribution of remedial placements in English, reading, and mathematics by curriculum; the actual programs of students placed into, but not taking remedial courses; the distribution, by curriculum, of high school averages for entering freshmen (general, English, mathematics, and foreign language); and the proportions of high school averages below 70 percent for freshmen entering between September 1971 and September 1975. Identifiers—\*Chicanos Studies

A group of 25 Chicano, bilingual, community college students were selected to participate in this curriculum development project, 15 spending an entire semester in Mexico, and 10 going on a shorter tour. The major objectives of the project were: (1) to develop and disseminate bilingual Chicano Studies curriculum materials; (2) to train school personnel in the use of these materials; and (3) to develop an intercultural dimension to Chicano Studies. Fourteen teaching modules for public school classrooms were developed by the participating students, each providing prototype of necessary curriculum materials and orientation and resource materials for the teacher. Among the other project achievements were a Chicano literature anthology, an anthology on Mexican and Chicano thought and philosophy, an anthology on Mexican and Chicano art, videotapes, poetry tapes, a catalogued collection of pictures and slides, collections of Chicano Studies books and records, a comprehensive bibliography of Chicano Studies materials, and indices

to Chicano Studies materials. The anthologies, indices, and media materials form a core of curriculum materials for use at the community college level. Special attention is paid to the international and interinstitutional aspects of the project, and the curriculum model is discussed in detail. (KB)

Descriptors—Adult Education, Advisory Committees, Agencies, Curriculum Design, Educational Needs, Financial Support, \*Junior Colleges, Models, \*Older Adults, \*Program Development, Program Effectiveness, \*Program Planning, Recruitment, \*Senior Citizens, Surveys, Teaching Methods

To establish a base for the development of new educational programs for older adults, a survey was conducted of personnel in 150 community colleges across the country to elicit information and perceptions concerning the following issues: (1) the content and scope of current educational programs for elders; (2) the nature of the developmental process of such programs; (3) the perceived obstacle to and possibilities for the development of viable and responsive education programs for elders. Using the information on current programs as a base, this sourcebook outlines appropriate core curricula and presents a model for program development built on the characteristics that appear to make programs successful. The key to the model is an alliance with the community of elders. Guidelines for the choosing of a representative board are presented, as well as suggestions on how to attain the proper balance between the consumer board and the college administrator. The model itself involves needs assessment, selecting program content, insuring program effectiveness (recruitment, location of programs, and teaching methods), and maximizing manpower, finances, and other resources. Appended is a list of federal, state, and other agencies on which community colleges can draw for assistance in developing programs. (Author/NHM)

Although the emphasis on occupational programs in two-year institutions may be justifiable, the humanities fields must not be totally forgotten. Since two-year college students have special needs, the teaching of the humanities can be made meaningful and appealing only by using new and creatively designed teaching methods. In this anthology of articles on the humanities in community colleges, Stanley Turesky offers a view from the perspective of a political scientist working with the National Endowment for the Humanities. William Taylor describes a model for faculty development. Bernard Luskin, David Keller, Myron Marty, Shannon Stack, Philip Nash, Robert Peterson, and Richard Janaro describe innovative humanities programs or courses in English, history, film, and interdisciplinary humanities, courses specifically designed for occupational students, and micro-college programs. Arthur Cohen and Florence Brawer analyze the preparation, inservice training, attitudes, values, and approaches in instruction of humanities faculty in community colleges. Finally, Deborah Crandall and Elizabeth Rinnander offer a bibliographic essay on community college humanities programs, supplied by the ERIC Clearinghouse for Junior Colleges. (Author/NHM)

Identifiers—California

A survey of California community colleges was conducted in order to ascertain what methods were being used to identify students for placement in freshman English courses, and what types of programs and services were being offered for entering students with reading and writing deficiencies. Of 100 colleges surveyed, 64 responded. There seems to be agreement among the respondents that single multipurpose identification instrument is not yet available which will assist in English placement and which will also identify individual student learning deficiencies. Currently, 48 colleges use a standardized test, 24 also require the submission of an essay as a writing sample, 7 use a writing sample alone, and 9 colleges allow open enrollment in freshman English courses. The writing sample is recommended as the most reliable placement method, but the time and expense required have caused several colleges to discontinue it. Tutoring services for students deficient in basic learning skills are available at 58 colleges. Separate remedial reading and writing courses are offered at 51 colleges, 46 colleges have a basic skills laboratory, and 15 colleges offer two-hour reading and communications skills courses. Survey responses are tallied, and respondent comments are attached. (Author/BB)

Pub Date May 74

Note—39p.; Graduate paper, Case Western Reserve University Graduate School of Library Science

EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage

Descriptors—Audiovisual Communication, Communications, \*Core Curriculum, Course Descriptions, Curriculum Design, Equipment Maintenance, \*Junior Colleges, Library Technicians, \*Media Specialists, \*Media Technology, Occupational Clusters, Occupational Mobility, \*Program Descriptions, Reprography, Telecommunication

This program, developed as a substitute for the library technology program at Lakeland Community College (Ohio), provides basic skills in the areas of communigraphics, reprographics, communications, telecommunications, audiovisual equipment repair and maintenance, and library technology. Taking into account the current swell in the field of media, this broad-based program is designed to prepare students to play a paraprofessional role not only in libraries, but also for a variety of other employment situations, thereby rendering them more "marketable" in the rapidly changing career ladder. In addition, it establishes feasible routes for lateral or vertical personnel movement. The bulk of this document is devoted to a review of the literature, in support of both instructional technology programs, and broad-based vocational education frameworks. A core curriculum is provided, along with four supplementary curriculum options: reprographics, telecommunications, maintenance and repair, and a general comprehensive option. Selected course descriptions are appended, along with lists of institutions having similar programs. (NHM)

Financial Needs of the Part-Time Student at Worthington [Minnesota] Community College.

Worthington Community Coll., Minn.

Pub Date 5 Dec 75

Note—28p.

EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage

Descriptors—\*Educational Objectives, Family Influence, Financial Needs, \*Financial Support, \*Junior Colleges, Marital Status, \*Part Time Students, \*Student Characteristics, Womens Education

Identifiers—Worthington Community College

In order to measure the importance of financial assistance to part-time students and develop a profile of part-time students at Worthington Community College (WCC), a questionnaire was designed and mailed to each of the 255 persons who had enrolled at WCC as part-time students during the 1974-75 college year. Although the response rate was low (29.4 percent), certain persistent indications were noted: financial assistance is desired and needed by many part-time students; in many cases, finances are a key factor in a decision to terminate or delay the realization of educational goals. Most part-time students are married, and bear considerable familial responsibilities, adding to the financial burden of attending college. The greatest financial difficulty is realized by women students, particularly married women students. When financial assistance is available, progress toward the realization of educational goals is enhanced—as evidenced by the average credit load carried. Since part-time students offer short-term, rather pragmatic reasons for attending college, the most effective dispersal of financial assistance may be in the form of many small grants, which should be sufficient to encourage students to meet short-term goals. Data are organized into charts and tables, and the survey instrument is appended. (Author/NHM)

Identifiers—\*Hawaii, Student Course Selection

The "course-taking" patterns of students in the seven colleges of the Hawaii Community College system have remained relatively stable over the past five years. As in the past, two-thirds of the total student credit hours (SCH) were generated in general education, and SCH in the Humanities comprised almost one-third of the total. Vocational students continued to take almost 80 percent of the SCH in vocational education, but the percentage of Liberal Arts majors taking vocational courses increased from 11 percent in 1971 to 15 percent in 1975. Liberal Arts students took 65 percent of the SCH generated in general education, while vocational and unclassified students took 28 percent and 5 percent respectively. Certificate students took 69 percent of their work in vocational courses, whereas degree students and "other" students (unclassified and special) took 66 percent of their work in general education. Liberal Arts students have taken the bulk of their work in general education over the years (92 to 89 percent, 1971-1975), vocational students have taken most of their work in vocational courses (59 to 61 percent, 1971-1975), and unclassified students have taken most of their work in general education (71 to 68 percent, 1971-1975). Tables and graphs are appended. (DC)

This compilation of tables, graphs, and charts is intended to serve as a source document for fiscal information on the community colleges in Connecticut and to provide guidance for the fiscal planning of college operations. Data covers the financial activities of state administered operating and capital accounts of all Connecticut community colleges, the Office of the Board, and the Central Naugatuck Valley Regional Higher Education Center. Part A includes various statistics for the system and for the individual colleges regarding student enrollment, contact hours, cost per student, and cost per contact hour, as well as expenditures for instruction, public service, academic support, student services, institutional support, and fixed charges. Part B reports income and expenditures for bookstore operations, laboratories and student services, athletic programs, and miscellaneous activities. Part C provides data on capital expenses and bond authorizations. Part D is a miscellaneous category including statements of lease expenditures and related costs, student aid grants, revenues deposited to the General Fund, National Direct Student Loan collections, Nursing Student Loan collections, student aid programs, vocational education funds provided, and the status of budgeted instructor positions. An Evaluation of an Individualized Interpersonal and Interdisciplinary Team Approach to Remediation at Mohegan Community College.

Pub Date 75

Note—99p.; Ed.D. Research Project, Nov University; Not available in hard copy due to marginal reproducibility of original document

EDRS Price MF-\$0.76 Plus Postage. HC Not Available from EDRS.

Descriptors—\*Academic Achievement, Basic Skills, Dropout Prevention, Grade (Scholastic), \*Junior Colleges, Low Achievement Program Descriptions, Program Evaluation, \*Remedial Instruction, \*Remedial Programs, \*School Holding Power

Identifiers—Mohegan Community College

In order to assess the effects of the remediation (foundations) program at Mohegan Community College (Connecticut) on students' academic performance and persistence in college, a study was made of 180 students who had enrolled in the Foundations Program between September 1971 and 1974, and 180 students who had scored below the 50th percentile on the Comparative Guidance and Placement Test but had not enrolled in the program. Students in the control group were chosen by the matched pair technique; scores of enrolled students were sifted for scores equal to those of students in the treatment group. Then, one score was randomly selected for each score in the treatment group. Using the records in the office of the registrar, transcripts of all subjects were examined and a variety of data were collected. Students in the Foundation Program were found to have significantly greater persistence than those in the control group. Students in the treatment group who persisted for a set period of time had higher quality point averages (QPA's) than classmates not enrolled in the program. Whether a student volunteered for the program or was pressured to enroll, his level of persistence was likely to be about the same. A survey of the literature is included and a bibliography is appended. (NHM)

Learning to Learn: A Handbook for Instructional Planning and Facilitation, 1975-76.

North Harris County Coll., Houston, Tex.

Pub Date [75]

Note—44p.

EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage

Descriptors—Behavioral Objectives, Bibliographies, Group Activities, \*Group Instruction, Individualized Instruction, Instructional Design, \*Junior Colleges, \*Learning Activities, Manuals, \*Teaching Guides, \*Teaching Methods, Teaching Procedures

Identifiers—North Harris County College

This handbook describes and develops the instructional system in use at North Harris County College (Texas). The document offers practical guidelines for the writing of course syllabi and the development of learning activities, and includes a selective bibliography of materials helpful to instructors. The learning activities discussed can be developed to implement and facilitate the objectives of a course. Ideally, several alternative for learning activities will be provided for each objective, so that students can be provided with the most effective learning environment. Procedures for implementing 15 different types of

group learning activities are provided, including audio-visual utilization, field trips, games, guest lecturers, case studies, discussion, role playing, student reports, and team teaching. Among the individualized learning activities suggested are audio-visual tutorials, computer assisted instruction, cooperative education, individualized instruction, learning resource centers, and programmed instruction. Appended are several short papers on what to look for in groups, how to conduct a film showing, how to stimulate lively film discussions, and how to write behavioral objectives for a course. (NHM)

Descriptors—Administrator Guides, \*Athletic Coaches, Athletic Equipment, \*Athletic Programs, Awards, Budgets, Injuries, Job Analysis, \*Junior Colleges, \*Manuals, Recruitment, Travel

Identifiers—Imperial Valley College

The policies and procedures stated in this handbook are to be used as a guide in the performance of duties and responsibilities by the Director of Athletics and athletic coaches at Imperial Valley College (California). This handbook supplements the Faculty Handbook, the district policy manual, the California Junior College Association Athletic Code, and the Desert Conference Athletic Code. Material for the guidelines has been obtained from adopted policies and procedures. The guidelines cover budget preparation, athletic travel, the reimbursement schedule, athletic itineraries, scheduling, college equipment, job descriptions, athletic injuries and physicals, athletic eligibility, programs, publications, awards, clinics and conferences, scouting and recruitment, banquets, and game procedures. Descriptors—Business, \*Community Benefits, \*Economic Research, \*Educational Economics, Expenditures, Human Capital, Income, \*Junior Colleges, Local Government, Metropolitan Areas, Multicampus Districts, Research Methodology, \*School Community Relationship, Tax Allocation

Identifiers—Metropolitan Community Colleges, \*Missouri (Kansas City)

This study assesses the economic impact of the Metropolitan Community Colleges (MCC) on the four-county region of metropolitan Kansas City, Missouri. The total economic impact is composed of a network of interactive cash flows between the colleges, business, government, and individuals, and may be derived by adding three distinct components: direct expenditures, indirect expenditures, and tax income to the counties and schools. For 1974-75, direct expenditures totalled \$14,294,490; indirect expenditures totalled \$13,865,654; and tax income totalled \$1,860,509. Thus, the total impact was \$30,020,653, a 51 percent increase since 1971-72. While approximately 82.5 percent of MCC's 1974-75 expenditures were made within the four county area, only 44.3 percent of the funds were provided by local sources. This means that nonlocal sources such as state and federal aid, and tuition paid by out-of-district students, accounted for the majority of the revenues of MCC, representing an increase in the area's economy of approximately five million dollars. Chapters of this document are devoted to examining MCC's impact on local business activity, jobs and income, capital expansion, local government, and human capital. Data are tabulated and graphed throughout the document, and guidelines for conducting similar studies are appended. (Author/NHM)

**Student Residence Locations and Socio-Economic Census Data for San Jose Community College District. A Demographic Profile Based Upon the 1970 Census.**

San Jose Community Coll. District, Calif.  
Pub Date Aug 75

Note—121p.; The 15 three-color maps referred to in the text are not reproducible and have been deleted from the document

**EDRS Price MF-\$0.76 HC-\$5.70 Plus Postage**  
Descriptors—Age, \*Census Figures, \*Community Characteristics, \*Demography, Ethnic Distribution, Income, \*Junior Colleges, \*Multicampus Districts, Population Distribution, Socioeconomic Influences, Student Enrollment Identifiers—California (San Jose), \*San Jose Community College District

As a first step in the construction of a geographically based student data system for San Jose Community College District, data were gathered concerning student residence locations, and related socio-economic census factors. The intent of the study was to provide decision makers with information that they would find useful in recruitment, curriculum and community service development, and evaluation of programs. Data are organized into two graphs and 26 tables, and break down information on enrollment classification, age, residence, demographic characteristics, income, and level of educational attainment by census tracts. The study determined that census tracts having the highest proportion of students generally had a white population, medium to high income, high education level, and a younger growing population. The census tracts showing a low percentage of student enrollment had a high Spanish speaking population, low income, low educational level and an older population. The methodology described here is in sufficient detail to allow institutions to conduct similar studies, using this document as a model. Five recommendations dealing with recruitment strategy, curriculum development, facility planning, replication, and administrative policy are made based on the findings of this study. (Author/NHM)

**English Instruction in Maryland Community Colleges.**

Pub Date 27 Jan 75

Note—6p.; Paper presented at the English Articulation Meeting, University of Maryland, January 27, 1975

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

Descriptors—Articulation (Program), Composition (Literary), Educational Trends, \*English Curriculum, \*English Education, English Literature, \*Junior Colleges, \*Remedial Programs, State Surveys, \*Technical Writing, Writing Skills

Identifiers—Maryland

This paper reviews a 1974 tabulation of freshman English programs made by the Maryland Association of Departments of English. Of 20 schools surveyed, including almost all the Maryland community colleges, 15 offer remedial courses, 18 have remediation facilities, and 15 grant academic credit for remedial courses. All of the colleges have regular English composition courses (English 101), complemented by some sort of exemption plan. While remedial courses concentrate on sentence and rudimentary paragraph writing, English 101 is concerned with the application of standard grammatical English to thought processes involving various levels of inquiry. The case of Charles County Community College is cited as an example of successful articulation between the remedial and regular English composition courses. In spite of course success in English 101, there has been a decline in the percentage of students choosing to take literature courses. The elimination of the English literature requirement has been partly responsible for this, but the extraordinary growth of technical writing courses, of which the number of sections has quadrupled over the past four years, has had even greater impact. A trend is seen toward English department alliance with the practical rather than the fine arts. (NHM)

Descriptors—Administrator Role, \*Change Strategies, \*Educational Policy, Instructional Innovation, \*Instructional Technology, \*Junior Colleges, Literature Reviews, \*Policy Formation, Teacher Participation

This practicum was designed to assess the need for a college-wide policy on instructional technology at the Metropolitan Campus of Cuyahoga Community College (Ohio). Before designing strategies for obtaining this policy, several investigations were undertaken: (1) college publications were studied to determine how other policies and procedures were implemented and if a policy on instructional technology would be consistent with the educational objectives, philosophy, and purposes of the institution; (2) the stated goals of the district and campus presidents were reviewed to see how a policy and procedure on instructional technology could help accomplish them; (3) the campus-wide policy and procedure on curriculum development was studied as a guide for the development of policy and procedure on instructional technology; (4) meetings were held with campus administrators to determine their potential roles; (5) faculty members were interviewed to establish their levels of interest; and (6) pertinent literature was examined. The results of these investigations are discussed, and four resulting strategies for obtaining the policy are presented, each focusing on a different potential change agent within the institution. **Future Veteran Enrollment: How Long? How Deep?**

Santa Ana Coll., Calif.

Pub Date Sep 75

Note—17p.

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

Descriptors—\*Enrollment Influences, \*Enrollment Projections, Enrollment Trends, \*Federal Aid, \*Junior Colleges, \*Veterans, Veterans Education

In order to assess the probable impact of the June, 1976 loss of veteran's benefits for Korean-era veterans, Santa Ana College administered a questionnaire to 4,350 veterans enrolled in the spring of 1975. The questionnaire was returned by 1,299 veterans, a 29.9 percent rate of return. Of those responding, 469 veterans (36.1 percent) were discharged before June, 1966, and will lose their benefits in June, 1976. Of the 469 veterans losing benefits, 269 (57 percent) stated that they plan to enroll in fall, 1976, as compared to 496 (59 percent) of the 830 veterans with continuing benefits. Although the reported data indicates that veteran enrollment will not be greatly affected with regard to students already enrolled, the potential market of veterans will decrease. An estimated drop of approximately 500 veterans in the fall of 1976, and an additional 400 drop in the spring of 1977 is projected. The main impact will be felt in work experience and television courses where, respectively, 82 percent and 68.5 percent of the enrolled students were veterans in the spring of 1975. However, the future enrollment of veterans will be sensitive to the job market and Congressional action with regard to benefits, and could change in different directions. The questionnaire is appended and responses are tabulated. (NHM)

**Six Year Trend of the COOP-T and SCAT-T Scores of Students Enrolling at Santa Ana College.**

Santa Ana Coll., Calif.

Pub Date Sep 75

Note—12p.

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

Descriptors—\*Academic Ability, \*Aptitude Tests, Comparative Analysis, Educational Trends, \*Grade Point Average, \*Junior Colleges, Junior College Students, Scores

Identifiers—Cooperative Reading Test, Santa Ana College, School and College Ability Test

A computer program was developed to compute the average Cooperative Reading Test-Total (COOP-T) scores, and the average School and College Ability Test-Total (SCAT-T) scores for students who took either one or both of these aptitude tests and enrolled at Santa Ana College (SAC) between 1969 and 1974. The averages were computed as a mean of the percentile ranking of the students taking either one of the tests. In addition, the mean GPA was computed by entering term for students who earned a non-zero GPA while at SAC. While the mean COOP-T reading scores show a general downward trend over the past six years, the SCAT-T scores have been constant (within a small range). The mean GPA of students who took either the SCAT or COOP test has been increasing over the past six years. This trend is consistent with the general trend of the mean total GPA at SAC. Data are organized into four tables and three graphs. (Author/NHM)

**A Report on the Academic Calendar: Quarter System or Semester System?**  
 Chabot Coll., Hayward, Calif.  
 Pub Date 15 Oct 75  
 Note—18p.

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**  
 Descriptors—\*Junior Colleges, Literature Reviews, \*Quarter System, \*School Calendars, \*Semester Division, Student Attitudes, Teacher Attitudes

Identifiers—\*Chabot College

Chabot College began in 1961 on the semester system and converted to the quarter system in 1966. This study was conducted in order to determine whether or not Chabot should return to the semester system. Questionnaires distributed to students and faculty revealed that whereas 88 percent of the responding students favored the quarter system, 52 percent of the responding faculty members preferred the semester system. The students indicated that the quarter system is better because courses are more straightforward, Christmas recess is improved since courses have ended, there is opportunity to have a greater variety of courses and faculty exposure over a given period of time, greater chance to start over again if you must withdraw, more opportunity to change majors without great loss of time, and a greater likelihood of finishing a course since the work does not stretch out so long. Faculty members looked on the quarter system with disfavor because it is too demanding on both faculty and students, and students need more time to learn. Following a brief review of selected research on the advantages and disadvantages of the quarter system, the author recommends that no action be taken to change the academic calendar at Chabot at this time. A short annotated bibliography of research studies is appended. (DC)

Identifiers—\*Maryland, Non Respondent Surveys  
 The annual statewide student follow-up studies conducted in Maryland are designed to establish a longitudinal data base on students attending Maryland community colleges, to identify student educational objectives at the time of entry, to provide an evaluation of Maryland's community colleges, and to establish a student-to-institution information feedback process. The surveys investigate five areas: (1) student academic and demographic characteristics; (2) student goals or primary reasons for attending a community college; (3) student employment experiences; (4) student transfer experiences and performances at other postsecondary institutions; and (5) student perceptions of the community college environ-

ment and services. The first survey, conducted in 1974, covered students who were first-time community college students in fall 1970; this, the second survey, was conducted in 1975 and covers students who were first-time community college students in fall 1971. The report discusses the findings and includes tables of data, comparing the results of the first and second surveys. In addition, it describes the procedures used in administering the questionnaires and collecting the data, and details the sequential sampling techniques employed in the non-respondent survey. The survey instruments are appended. (DC)

Identifiers—\*Library Media Technical Assistants

Three workshops were held to acquaint interested parties with the growing need to prepare persons with non-standard physical characteristics for successful employment as Library/Media Technical Assistants (L/MTA's). The kinds of handicapped persons considered were the partially sighted, the totally blind, the partially deaf, the totally deaf, and those with physical handicaps which permit independent mobility and reasonable coordination and use of the hands. The scope of library services under consideration was limited to public services, technical services, and audiovisual services. The workshops were designed to: (1) help community college librarians and instructors of L/MTA programs to become aware of the advantages of hiring the handicapped; (2) to train currently employed community college L/MTA's to work with the handicapped; and (3) to orient community college students with non-standard physical characteristics to employment as L/MTA's. This report includes background information on the need to prepare physically handicapped persons for library service and the problems to be overcome, a detailed list of pertinent job tasks that the handicapped can accomplish, methods of recruitment and training, as well as a selected bibliography, a list of pertinent AV materials, and a list of resources for equipment for the handicapped. \*Weekly Student Contact Hours, WSCH  
 Since 1968, an increasing number of California community colleges have participated in the Presidents' Study, a study of Weekly Student Contact Hours (WSCH) and Full-Time Equivalent Faculty (FTE) to determine faculty work loads, cost factors, and trends. In 1973, 41 Northern and 26 Southern California community colleges reported. Golden West College began participating in 1974. This report compares the data obtained at Golden West in fall 1974 with that obtained for the entire state, and with averages for small and large community colleges, in fall 1973. Data on WSCH, percent WSCH, FTE, percent FTE, and load and cost indexes are presented by college division and by instructional disciplines within the eight divisions: business, communica-

tions, fine arts, health sciences, physical education, mathematics/science, social science, and technology. The methodology of the Presidents' Study is criticized for its oversimplified equation of faculty load with WSCH, a measurement less meaningful for institutions committed to non-traditional programs and methods. Identifiers—Golden West College

The Faculty Fellowship Program at Golden West College (California) provides an annual fund to support faculty in implementing innovative methods of instruction. Since 1969, 401 proposals have been reviewed, and \$316,287 has been allocated to 189 projects (47 percent). This report presents an objective overall picture of the program and provides an analysis of its effectiveness based on available data, consisting primarily of the opinions of the faculty members involved. The strengths and weaknesses of the program are discussed and recommendations for program improvement are made. Among the recommendations are the following: (1) since the same instructors and the same divisions seem to be receiving all the funding, new people and new divisions should be encouraged to apply; (2) team participation on fellowships should be encouraged; (3) after completion, fellowship projects should be constantly revised; and (4) every fellowship project should be accountable for a periodic progress report, completion report, and an evaluation report. The questionnaire used to solicit faculty opinions and a selection of project objectives are appended. (DC)

 Descriptors—Course Content, \*Course Descriptions, \*Curriculum Guides, Decision Making Skills, \*Individual Development, Individual Power, \*Junior Colleges, \*Personal Growth, Self Esteem, Self Evaluation

A personal growth course was developed and taught at Houston Community College (Texas) during the fall of 1974. Ninety students in 10 sections were given three semester hours of academic credit upon successful completion of the course. Fifteen three-hour classes were conducted. The first 12 sessions were designed primarily to increase the students' self-awareness and self-understanding with a minimal focus on producing behavioral change. The last three classes were designed to help the student build a personal growth plan based on the self-awareness and self-understanding gained from the first 12 sessions. Each class session began with a stated objective, and students were provided with structured activities. Students were encouraged to express themselves freely and to provide feedback to others. The Personal Orientation Inventory and a specially designed Perception of Problem-Solving and Decision-Making Scale were administered on the first night of class and again on the last night of class. Scores on inner direction, self-acceptance, self-regard, capacity for intimate contact, spontaneity, existentiality, acceptance of aggression, self-actualizing value energy, and time competency increased significantly. Test data are organized into tables, and a complete course syllabus is appended. (Author/NHM)

**Trends and Patterns of Change in Public Community College Collective Bargaining Contracts. Research Summary No. 1.**  
 Academic Collective Bargaining Information Service, Washington, D.C.

Spons Agency—Carnegie Corp. of New York, N.Y.

Report No—RS-1

Pub Date Sep 75

Note—14p.

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—\*Collective Bargaining, College Faculty, \*Contracts, Decision Making, Educational Trends, \*Fringe Benefits, \*Junior Colleges, Negotiation Agreements, Teacher Salaries, \*Teacher Welfare, Teaching Benefits, Teaching Conditions

Initial and subsequent contracts that had been negotiated at 41 Illinois, Michigan, New Jersey, and New York community colleges between September 1966 and September 1974 were analyzed to determine whether collective bargaining has been effective in gaining increased participation in decision-making and increased economic welfare. All of the colleges included in the study had negotiated at the institutional level, and had negotiated a minimum of three contracts with a faculty union. Contract provisions related to faculty welfare were divided into seven categories: compensation; insurance; professional and public service leaves; personal leaves; staff development; working conditions; and other faculty welfare provisions. Contract provisions related to institutional decision-making were divided into five categories: rights and responsibilities; workload; personnel policies; grievances; and institutional planning, research, and budgeting. Nine tables of data were examined to identify contractual trends or patterns of change. Findings support the conclusion that collective bargaining contracts are cumulative in nature. The duration of the contract periods tends to increase after negotiation of the initial contract, and the scope of the negotiations tends to broaden with additional contracts. (Author/NHM)

Survey of Computer Facilities in Minnesota and North Dakota.

Pub Date Oct 75

Note—8p.

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—Business, \*Computers, \*Computer Science Education, Curriculum Planning, Electronic Data Processing, Employment Qualifications, \*Junior Colleges, Labor Market, \*Manpower Needs, \*Programming Languages

Identifiers—Minnesota, North Dakota

In order to attain a better understanding of the data processing manpower needs of business and industry, a survey instrument was designed and mailed to 570 known and possible computer installations in the Minnesota/North Dakota area. The survey was conducted during the spring of 1975, and concentrated on the kinds of equipment and computer programming languages currently in use. Although the initial response was only 121 (21.23 percent), a second mailing resulted in a total of 208 completed questionnaires (47.03 percent). Eliminating educational installations, service bureau users, and terminal users, a total of 179 businesses, with 198 computers installed, were identified in the two state area. From the information gathered, it appears that a student graduating in computer curriculum in the Minnesota/North Dakota area has a 58.6 percent chance of working on an IBM computer. There also is a 67 percent chance that the computer would be classed as a small computer. The student should, therefore, have a background in the RPG and COBOL languages. Should he not be working on an IBM computer, the COBOL language still equips him with a language used on most other computers. The only exception would be on an NCR computer, which has only 8 percent of the total market. (Author/NHM)

A Four Year Follow-Up of Non-Returning Students at Montgomery College.

Montgomery Coll., Rockville, Md. Office of Institutional Research.

Pub Date 75

Note—59p.

EDRS Price MF-\$0.76 HC-\$3.32 Plus Postage

Descriptors—\*Dropout Attitudes, \*Dropouts, Educational Trends, Employment Experience, \*Followup Studies, Institutional Research, \*Junior Colleges, Transfer Students, Vocational Followup

An annual survey of non-returning Montgomery College students from the years 1971 to 1973 was conducted in order to examine reasons for choosing to leave the college, identify trends, determine the status of students at the time of the survey, and assess the impact of their college experience on current activities. The 454 usable responses (20 percent) were weighted to compensate for the sampling technique. Adding the 550 students who participated in a similar 1970 study, which provided baseline data, the weighted total of the four-year study population comes to 1,904 students. About half of the non-graduates who transferred enrolled at the University of Maryland. Nearly two-thirds of the transfer students changed majors in the process, with 59 percent of them losing some of their credits. Over the four-year span, fewer non-graduates seemed to be continuing their education, and more of them were employed, mostly in health-related, secretarial, or computer-related occupations. About half of the students felt that their course work was related to their present jobs. Reasons for leaving Montgomery College were, for the most part, personal, with nearly one-fourth having some intention of returning. Attitudes toward the instruction received at the college were very favorable overall. Data are organized in 22 tables and 5 figures, and the questionnaire is appended. (Author/NHM)

The Development of Listener Competence.

Bowling Green State Univ., Ohio. Dept. of Psychology.

Spons Agency—National Inst. of Neurological Diseases and Stroke (NIH), Bethesda, Md.

Report No—NIH-NS-09590-03

Pub Date Apr 75

Note—7p.; Paper presented at the Biennial Meeting of the Society for Research in Child Development (Denver, Colorado, April 10-13, 1975)

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—\*Communication Skills, \*Early Childhood Education, \*Egocentrism, \*Elementary Education, Elementary School Students, Interpretive Skills, Kindergarten Children, Listening Comprehension, Listening Skills, \*Role Theory

The effects of listener egocentrism in communication tasks was investigated as a possible explanation for communication failure in young children, since such failure has often been attributed to the cognitive egocentrism of the child. Twenty-four children from each of four grade levels (kindergarten, second, fourth, and seventh) were randomly assigned to experimental and control groups. Both experimenter and child had circles which were half white and half black. Under various conditions (1) child seated next to experimenter; (2) child seated at 90 degree angle to experimenter; and (3) child seated at 180 degree angle to experimenter) the children were asked to replicate the experimenter's placement of the circle on the basis of the experimenter's egocentric explanation of its position. Finally, each child was given Flavell's (1968) storytelling task to assess general role-taking ability. Results demonstrated that listeners actively contribute to the success of the communication problem by compensating for inadequate messages; and that there is a progression in the development of this ability. Conclusions suggest types of listener compensation strategies and advise caution in attribution of listener competence to role-taking ability. (ED)

A Developmental Exploration of the Effects of Spacing on the Recall of Repeated Words.

Pub Date Apr 75

Note—12p.; Paper presented at the Biennial Meeting of the Society for Research in Child Development (Denver, Colorado, April 10-13, 1975)

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—Adults, \*Childhood, \*Cognitive Development, Memory, \*Recall (Psychological), \*Word Lists

Identifiers—Encoding (Psychological), Information Processing (Psychological), \*Short Term Memory

The purpose of this experiment was to examine lag function developmental parameters and to test a related developmental hypothesis and the predictions it generated. Fourth and eighth graders and adults were shown a series of words, one at a time, with some words presented twice. Between the two presentations of each repeated word there was one of three lag conditions: no lag (Lag O), short lag, or long lag. Items that were not repeated were labelled 1P words and used as a recall baseline. Subjects, tested individually, were given up to two minutes for written recall. Results showed highly significant lag effects for each age. Two predictions were supported: (1) that young children's recall would increase significantly between Lag O and short lag while older subjects' recall would not, and (2) that the older subjects' recall would show a major increase between short and long lag words while younger children's would not. No significant differences between 1P and Lag O recall levels were evident at any grade, suggesting that the number of retrieval cues for Lag O and 1P terms is identical. It is proposed that the paradigm suggested in this study might be used to explore developmentally the encoding processes used for pictures, words and other stimuli in recognition and recall tasks, and to test Maccoby's proposal that children are not as efficient as adults in using information available in the task to aid performance. The paradigm is currently being used to study how motivational variables affect encoding strategies. (GO)

An Experimental Study of the Comparison of Pupil Achievement in the All Day Kindergarten and One Half Day Control Group.

Pub Date Jul 74

Note—71p.; Ph.D. Thesis, Walden University

EDRS Price MF-\$0.76 HC-\$3.32 Plus Postage

Descriptors—Achievement Tests, \*Comparative Analysis, Day Care Programs, \*Disadvantaged Youth, \*Early Childhood Education, Grade 1, \*Kindergarten Children, \*Preschool Evaluation, Reading Level, Reading Readiness

Identifiers—\*Full Day Kindergarten

This dissertation report describes a 3-year study which compared the effectiveness of full-day kindergarten sessions (the experimental condition) and half-day sessions (the control condition) in promoting academic achievement. A group of 20 5-year-olds was assigned to each condition; each group contained equal numbers of culturally disadvantaged, economically disadvantaged and middle-class children. Readiness scores and achievement test scores for children in both groups were obtained at the beginning and end of the kindergarten year. Subsequent first grade placement and reading level attainments at the end of first grade were recorded. Results indicated that there was no statistically significant difference between full-day and half-day groups on any of these measures. When achievement test scores of the culturally disadvantaged were analyzed alone, there was still no statistically significant gain in achievement by the full-day over the half-day, indicating that the full-day program did not provide any special academic benefit to culturally disadvantaged children. It is suggested that on the basis of these results, the establishment of full-day kindergarten cannot be recommended on the grounds that it would measurably improve children's achievement. Demand for Day Care: An Introduction for Campus and Community.

Source, Inc., Washington, D.C.

Spons Agency—Day Care and Child Development Council of America, Inc., Washington, D.C.

Pub Date 74

Note—45p.

Available from—Source, Inc., P. O. Box 21066, Washington, D. C. 20009 (Paper, \$1.50)

Document Not Available from EDRS

Descriptors—Bilingual Schools, \*Child Care Centers, Child Development, \*Cooperative Programs, Curriculum, \*Day Care Programs, \*Day Care Services, \*Early Childhood Education, Government Role, Legal Problems, Nutrition, Parent Participation, Program Descriptions, Resource Guides, Taxes

## Identifiers—\*Campus Day Care

This booklet, primarily composed of excerpted articles taken from a variety of sources, has been compiled to acquaint the reader with general day care issues and the many facets involved in the concept of day care. Special emphasis is placed on campus day care and day care cooperatives. Also included are a description of a bilingual center, thoughts about what childhood education should entail, consideration of the importance of real parental involvement, child development guidelines, and information on tax deductions for child care expenses, possible legal problems, available funding for day care, government food programs for children, and the child care system in China. In addition, annotated lists of helpful resource groups, books, pamphlets, films and publications are provided. (Author/ED)

## The Influence of Early Stimulation on Language Development.

Pub Date 12 Apr 76

Note—26p.; Paper presented at the Biennial Meeting of the Society for Research in Child Development (Denver, Colorado, April 12, 1975)

EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage

Descriptors—\*Cognitive Development, \*Home Programs, \*Imitation, \*Infants, \*Language Development, \*Language Research, \*Parent Child Relationship, \*Parent Education, \*Record-keeping, \*Vocabulary Development

This longitudinal study explored the effects of early language stimulation upon norms of the language development of three infants. When the infants were 4-5 months old, a long-term program of intensified early language stimulation was implemented by weekly home tutoring sessions with the parents. The tutor stimulation program consisted of an adult-guided model of environmentally specific language activity framed in interpersonally sensitive modes of adult-child interactions. These modes consisted of five types of parent-child activities: routines of daily caregiving, sociodramatic play and sensory motor play, object exploration and manipulative play, periodic trips inside and outside the home, and looking at clear simple pictures in books. In all forms of activity the stress was on alternating adult modeling with infant initiative or responsive behavior, encouraged by adult responsiveness or suggestion. Two measurements were used: (1) periodic tests of cognitive development (including a language quotient), and (2) a system of daily record keeping by parents which included a developmental study of initial vocalization, comprehension, imitations and productions of words, phrases or sentences. Results indicate that the mean levels and rates of language development for the three infants greatly surpassed norms of development, the language acquisition indices developed in the same sequence for each child, and the stimulation program may be facilitating the development of other abilities in the child. ## Toward an Etiologic Classification of Pediatric Social Illness: A Descriptive Epidemiology of Child Abuse and Neglect, Failure to Thrive, Accidents and Poisonings in Children Under Four Years of Age.

Pub Date Apr 75

Note—17p.; Paper presented at the Biennial Meeting of the Society for Research in Child Development (Denver, Colorado, April 10-13, 1975)

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—\*Accidents, \*Child Abuse, \*Demography, \*Family (Sociological Unit), \*Family Environment, \*Family Health, \*Family Mobility, \*Family Problems, \*Family Relationship, \*Hospitals, \*Interviews, \*Marital Instability, \*Parent Child Relationship, \*Parent Role, \*Preschool Children

This study examined the underlying common origins of pediatric social illnesses (i.e., child abuse and neglect, failure to thrive, accidents, and poisonings) in children under age 4. Subjects were 560 children admitted to the Children's Hospital Medical Center in Boston. Children admitted with pediatric social diagnoses were matched on the basis of age, race, and socioeconomic status with control children who were without pediatric social diagnoses. Subjects'

mothers were interviewed at the hospital about their housing, marital, financial, health, employment, child care, and familial problems and about specific experiences of the mother and her child. Results indicated that accidents were characterized by high levels of stress due to recent mobility and change in household composition. Cases of failure to thrive and child abuse shared high levels of maternal historical stress (i.e., frequent family mobility, a broken home, and a history of violence or neglect) and a lack of social support. As a group, families of children at risk for pediatric social illness appeared to have less than regular health care, had experienced many recent moves, had many child rearing problems, a history of a broken family in the mother's childhood, and mother-initiated separations from the child. ## Relationship between Human Temporal Behavior and Discrimination-Reversal Learning.

Pub Date Sep 72

Note—12p.; Paper presented at the Annual Meeting of the American Psychological Association (80th, Honolulu, Hawaii, September 1972)

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—\*College Students, \*Conditioned Response, \*Discrimination Learning, \*Individual Differences, \*Performance Criteria, \*Shift Studies, \*Time Perspective

This study is an exploratory attempt to test the idea that individual differences in the rate of acquisition of an original discrimination learning are related to individual differences in the capacity to estimate the passage of time. Included is a review of the literature on the psychology of time which indicates that underestimation of time is associated with predominance of excitatory processes and overestimation time is associated with inhibitory processes. A discrimination learning problem was administered to 91 male college students to test the hypotheses that time estimation is positively related to the number of trials required to reach (1) the original discrimination learning criterion, (2) the reversal learning criterion, and (3) the total discrimination-shift criterion. Results support two of these hypotheses and the theoretical analysis of the relation between time estimation and discrimination learning. It was concluded that the rate at which a discrimination is learned is a function of the amount of excitatory predominance as measured by the time estimation task, and that a fundamental process which occurs during discrimination learning is the rate at which excitatory processes come to be conditioned to a predominance over inhibitory processes. ## Effects of Maternal Medication on Mother-Infant Interaction: Methodological Considerations.

Georgia State Univ., Atlanta.

Spons Agency—National Inst. of Mental Health (DHEW), Rockville, Md. Center for Studies of Crime and Delinquency.

Pub Date 11 Apr 75

Note—14p.; Paper presented at the Biennial Meeting of the Society for Research in Child Development (Denver, Colorado, April 10-13, 1975)

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—\*Infants, \*Interaction, \*Interaction Process Analysis, \*Medical Treatment, \*Mothers, \*Overt Response, \*Parent Child Relationship, \*Perinatal Influences

This report examines the relationship between maternal medication during labor and mother-infant interaction on the third day of life. Subjects were 45 black low-income mothers and their healthy full-term infants. The mothers' perinatal drug history was obtained, and a coded observational schedule was used to record maternal and infant behaviors during two 30-minute sessions on the third day after birth. Results indicated that infants who had been exposed to higher drug levels were more passive and required more responsive effort from their mothers than infants who had been exposed to lower drug levels. The behavior of the more drug exposed infants was more erratic and less continuous, and maternal behavior reflected this by occasional reduction in responsive effort. It is suggested that even relatively low amounts of maternal medication can affect early mother-infant interaction. (GO)

## The Role of Language in Early Childhood Education.

Pub Date 74

Note—12p.

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—\*Cognitive Development, \*Early Childhood Education, \*Generative Grammar, \*Language Development, \*Language Program, \*Linguistic Theory, \*Preschool Program, \*Sociolinguistics, \*Teacher Role

This paper discusses the role of language in early childhood education. The concept of Chomsky's generative grammar is explained briefly as the linguistic approaches of Piaget, Vygotsky and Whorf are compared with regard to the relation between cognitive structures and inner linguistic structures. An enigmatic discussion of language acquisition is presented in order to suggest the scope of issues involved when studying linguistics. The sociological aspects of language are touched upon briefly. Three early childhood programs—New Nursery, Yonemura, and Talk Reform—are compared in terms of goals, teacher role, interactional patterns, level of preorganization, types of activities used, and evaluation methods. It is concluded that teachers need to be aware of current theories of language development and linguistic research and that they need to be able to list diagnostically to each child's language. Identifiers—\*New York (New York), \*Teacher Therapist Cooperation

This paper describes a tutoring program in which a children's psychiatric clinic, a city university department of education and school personnel collaborated to provide additional services for underachieving elementary school children who were receiving psychotherapy. An additional aim of the program was to upgrade the quality of the training programs in psychiatry and teacher education. College students in a teacher education sequence did the tutoring under joint supervision of clinic staff, classroom teachers, and college faculty. In about half the cases, tutors worked with the child exclusively at his school for 2 and 3 one-hour sessions a week; other tutors worked with the child in school and at home. Lectures on child development and small group clinical supervision sessions supplemented the tutors' training. Program strengths and weaknesses are reviewed. (BRT)

## Infant Care and Childhood Performance in East Africa.

Pub Date Apr 75

Note—17p.; Paper presented at the Biennial Meeting of the Society for Research in Child Development (Denver, Colorado, April 10-13, 1975)

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—\*African Culture, \*Behavior Patterns, \*Child Rearing, \*Cognitive Tests, \*Cultural Differences, \*Farmers, \*Foreign Countries, \*Infant Behavior, \*Learning Characteristics, \*Mothers, \*Observation, \*Parent Child Relationship, \*Time Factors (Learning)

Identifiers—\*Africa

This paper reports on a followup study of the long-term effects of infant care patterns among the Logoli people of East Africa. In the original study, 12 infants, ages 7-13 months, were observed to obtain a measure of the frequency with which the infant was held by the mother and

hens, latency of response to the infant's crying, and the number of times the mother was inferred to have caused the crying. Followup data were obtained on 8 to 11 of the children at 5 years of age. Children's ability on three standardized tasks (perseverance on a puzzle, an embedded figures test, and a name-learning task) as well as in complex tasks and participation in household chores was evaluated. Study findings appeared to confirm that certain early care variables affect later performance of children. Difficulties in the interpretation of study findings are discussed. (BRT)

*Conway, Dorice Lytton, Hugh*  
Language Difference between Twins and Singletons - Biological, Environmental, or Both? Pub Date Apr 75

Note—7p.; Paper presented at the Biennial Meeting of the Society for Research in Child Development (Denver, Colorado, April 10-13, 1975)

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**  
Descriptors—Biological Influences, Environmental Influences, \*Infants, \*Language Development, \*Language Research, Mothers, \*Nature Nurture Controversy, Parent Child Relationship, \*Twins

This data compared language complexity measures, birth information, and family data for twins and singletons of the same sex, age, and socioeconomic status. The subjects were four pairs of male twins, four pairs of female twins, four pairs of opposite sex twins, and 24 singletons, 32-33 months of age. Samples of each child's spontaneous utterances were obtained on a two-hour tape recording made in the home setting and an accompanying shorthand record of ongoing action. At the same time measures of articulation and vocabulary comprehension were obtained, a Sentence Initiation Task was administered, and a parent interview form was completed. Birth information was obtained through hospital records. Significant differences between the two groups were found on the language measures, with the twins scoring lower. Rate measures (overall rate of utterance and rate of utterance to mother) were the major source of difference. No significant group differences were found on the phrase-complexity measure. Twin-singleton differences were found on all of the biological measures. It was concluded that the language development of twins may be handicapped by a biological factor of perinatal or prenatal stress and by too much sibling interaction and too little adult interaction in the acquisition of the basic semantic ideas required in advance of expression. Descriptors—Administrator Background, Certification, Day Care Programs, \*Early Childhood Education, \*Kindergarten, \*Preschool Programs, Public Support, Questionnaires, \*State Aid, \*State Surveys, Teacher Certification

Identifiers—\*Education Commission of the States

This survey of the extent to which each state is supporting kindergarten and other early childhood services consists of three tables showing: (1) state-by-state expenditures (total and per pupil) for kindergarten and prekindergarten, other state-supported services (medical, dental, etc.) to retrain graders; information on kindergarten entrance age and whether kindergarten is mandatory or permissive; (2) certification requirements including agency responsible for certification) for day care personnel, prekindergarten and kindergarten teachers, administrators, and paraprofessionals; and (3) program administration and personnel development, including responsible agencies, form of coordination among administrative agencies, and number of colleges and junior colleges offering programs in early childhood education. Data was obtained from

response to a questionnaire sent to all states and three territories in 1972 and 1974. A one-page summary of table data is included. (BRT)

Modernization Through Education of Mother-Child Dyads: Description of Research Strategy. Pub Date Apr 75

Note—11p.; Paper presented at the Biennial Meeting of the Society for Research in Child Development (Denver, Colorado, April 10-13, 1975)

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

Descriptors—Black Community, Delivery Systems, Infants, Life Style, Low Income Groups, Mother Attitudes, Negro Housing, \*Negro Mothers, Observation, \*Parent Child Relationship, \*Parent Education, \*Preschool Education, \*Research Methodology, Social Agencies, Socialization, Social Values, Sociocultural Patterns

Identifiers—\*Illinois (Chicago)

This paper describes research strategy for evaluating mother-child intervention programs for black infants in three Chicago low-income housing projects. Mothers were observed with their infants in pre- and post-testing sessions in a room with magazines, children's books, and a television. Analysis of the data is intended to show: (1) the extent to which intervention programs encourage families to change their life styles, (2) the relationship of the mother's personality and self-concept to her overall conception of life in her own family, and (3) the reciprocal relationship already existing between the mother and her 18-24 month-old child before any intervention. There were approximately 40 family participants from each of three housing projects varying greatly in structural arrangements. Two different parent programs, modeled after those of Levenstein and Badger, were used in each housing project. A third group of children at each site served as controls. (BRT)

Children's Verbal Imitation, Comprehension and Production of Temporal Structures.

Pub Date Apr 75

Note—16p.; Paper presented at the Biennial Meeting of the Society for Research in Child Development (Denver, Colorado, April 10-13, 1975)

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

Descriptors—\*Cognitive Development, Early Childhood Education, Imitation, \*Language Development, Language Tests, \*Memory, \*Preschool Children, \*Psycholinguistics, Research Design, Verbal Development, Verbal Tests

This study investigated the relationships obtained among verbal imitation, comprehension, and production when a stimulus sentence exceeded the child's short term memory. A total of 32 children, aged 3 to 5 years, took tests of comprehension, nonverbal imitation, verbal imitation, and production of structures expressing sequence ("before", "after", "first", etc.) and simultaneity ("while", "at the same time" etc.). Scores on the nonverbal imitation of both sequence and simultaneity were significantly higher than scores on comprehension, verbal imitation, and production. In addition, there was a significant interaction between temporal construction and task. Scores on the comprehension of both sequence and simultaneity were found to be significantly higher than on production. The significance of these data are discussed in detail; and an argument is made for a multi-instrumental approach to the study of language acquisition. (ED)

A Critical Analysis of Matrix Task Classificatory and Seriation Abilities.

Pub Date 12 Apr 75

Note—21p.; Paper presented at the Biennial Meeting of the Society for Research in Child Development (Denver, Colorado, April 12, 1975)

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

Descriptors—Age Differences, \*Classification, \*Cognitive Development, Cues, \*Developmental Tasks, \*Early Childhood Education, Logical Thinking, Matrices, Memory, Research Methodology, Research Problems, \*Serial Ordering, Thought Processes

Identifiers—\*Piaget (Jean)

Two experiments which investigated the young child's ability to deal with multiplicative classes and relations (considered behavioral indices of concrete operations thought) in double series and cross class matrices are described and discussed. In the initial study, 160 children from preschool through grade 2 received six matrix subtasks (reproduction and transposition subtasks of cross classification, classification seriation, and double seriation) in one of six orders of presentation (the reproduction subtask always preceded the transposition case for a given matrix). The second experiment followed much the same design as the first, except that the class/series matrix was not used and stimuli for one cross class task were rearranged so that neither dimension was seriated across rows or columns of the matrix. Results, conclusions, and methodological problems of each experiment are discussed in detail. It was concluded that the pattern of lesser general difficulty for multiple relations contrasted with multiple classification concepts was substantiated in these experiments (and other experiments (and other experiments also discussed) and that the original structural synchrony conclusions of Inhelder and Piaget need further examination. (ED)

This report presents current statistics, reports, statutory language, and regulations pertaining to child care in the United States in 1974. A short summary precedes the numerous tables which compose nearly three-quarters of the report. These tables illustrate the following kinds of data: (1) the number and status of children needing child care; (2) the number of women in the labor force, both in female-headed and husband-wife families, particularly in relation to status and in-

come; (3) child care arrangements available (with approximate usage), including preprimary schools, child care centers, family day care and home care, with particular reference to the care of children under six years of age; (4) federal involvement in child care, including type of involvement and fiscal level; and (5) current state and federal licensing standards and regulations. The appendices include excerpts from various reports that either were used in compiling the data or are included to elucidate certain issues. (ED)

Identifiers—\*Home Based Preschool Education

This guide is to be used by leaders of inservice training workshops for instructors of parent study groups interested in learning new parenting skills that will foster home-based preschool education. The introduction provides suggestions on how a school might begin a program of school-sponsored, home-based early childhood education. The guidelines include: reasons for school sponsorship, how to organize and finance the program, selection and training of instructors, scheduling parent study groups, and techniques for teaching parents. The program guide is primarily concerned with use of the four inservice training filmstrips on selecting participants and group leaders, purpose of the filmstrips, general and instructional considerations, the procedure for using the filmstrips, and how to evaluate the teacher inservice training. The four filmstrips are

entitled: Introduction to Home-Based Preschool Education; The Nature of the Adult Learner; Methods for Helping Parents Learn; and Additional Activities and Experiences for Helping Adults Learn. The texts of each filmstrips are given and annotated with pertinent discussion questions. A bibliography of suggested reading on working with parents and general child rearing is included, along with lists of booklets, pamphlets and simple how-to books appropriate for parents. (ED)

Identifiers—\*Home Based Preschool Education

The goal of this program, centered around six filmstrips, is to help parents learn new skills for teaching their young children in the home. This leaders' guide describes the purpose of the filmstrips, gives some organizational and general considerations, outlines the procedure for using the filmstrips, and enumerates some guidelines for handling adult groups and evaluating the effectiveness of the program. The texts of each of the six filmstrips are given and annotated with pertinent discussion questions. One filmstrip provides an introduction to home-based preschool education, two others describe how children learn, and three filmstrips suggest ways parents can help children learn at home through informal activities and the use of toy libraries. A bibliography of books and pamphlets for parents on child rearing and education is provided. (ED)

This idea resource booklet (in the format of an illustrated school-year calendar) is designed to be used by teachers in developing programs for preschool children. The developmental and seasonal activities included follow a progression from simple to complex. Suggestions for modifying many of the activities to each child's level of development are given. The activities are cross-indexed under developmental purposes, and are designed to provide a balance between free play and structured guidance, active and quiet experiences, large and small group and individual activities within a flexible schedule. Each activity is described, including the materials needed. Bibliographies of recommended books and records for children and recommended reading for teachers are included. (Author/ED)

Report No.—NIMH-MH-16080

Pub Date Apr 75

Note—32p.; Version of paper presented at the Biennial Meeting of the Society for Research in Child Development (Denver, Colorado, Apr 10-13, 1975)

EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage  
Descriptors—\*Ambiguity, Behavior Patterns, Fathers, Longitudinal Studies, Mothers, Observation, Parent Attitudes, \*Parent Child Relationship, Parent Influence, \*Personality Studies, Personality Tests, \*Preschool Education, \*Psychological Characteristics, Psychological Evaluation, Q Sort, Sex Differences  
Identifiers—California Child Q Set, Lowenfeld Mosaic Test

The phenomenon of intolerance of ambiguity in young children was investigated in this longitudinal study. Personality data for the total of 12 children in the study were obtained from: (1) descriptions of the children at both 3 and 4 years of age by their teachers, using the California Child Q-set; (2) the children's performance of the Lowenfeld Mosaic Test; (3) their reactions to a Curiosity Box covered with a variety of hinges, snaps, electrical switches, sandpaper, bull-chain latches and peepholes; and (4) independent observations of the children in a relatively unstructured 20-minute sandbox play situation. Information on parent-child relationships pertinent to children's intolerance of ambiguity was obtained from: (1) self-reported parental child-rearing attitudes and practices; (2) video-taped parental behaviors in a teaching situation; and (3) descriptions of mothers and fathers by the mothers according to an Adjective Q-sort. Data suggest that intolerance of ambiguity in young children can be described; that it is relatively stable over a period of at least one year; that children intolerant of ambiguity tend to avoid, restrict attention within and impose premature structure upon relatively unstructured situations; and that this characteristic is significantly associated with paternal hostility, impatience and rejection for boys, and with unusually high levels of maternal supportiveness for girls. Cohen, Davene  
CAPIT Toy Catalog.  
Northwest Regional Educational Lab., Portland, Ore.

Spons Agency—National Inst. of Education (DHEW), Washington, D.C.

Pub Date Jul 75

Note—48p.

Available from—Office of Dissemination and Installation Services, Northwest Regional Educational Laboratory, 710 S.W. Second Ave., Lindsay Bldg., Portland, Oregon 97204 (Paper, \$2.95)

EDRS Price MF-\$0.76 Plus Postage. HC No Available from EDRS.

Descriptors—Catalogs, Cognitive Development, \*Early Childhood Education, Elementary School Students, \*Games, Home Visits, Learning Activities, \*Parent Education, \*Play Preschool Children, Reading Development, Resource Materials, Skill Development, Social Development, \*Toys  
Identifiers—CAPIT, \*Children and Parents Involved Together, Northwest Regional Educational Laboratory

This catalog, a product of the CAPIT program (Children and Parents Involved Together), is designed to familiarize parents with durable aesthetically appealing toys, games, tools, and materials which are readily available and have potential educational value. Home visitors in the CAPIT program use the catalog during their visits to help families select appropriate toys for their children. For each of the 33 items displayed in the catalog, information is presented about the contents, approximate age level for which the item is most appropriate, and skills the item can assist in developing. Although most of the toys are designed for preschool and elementary school children, the games and some of the toys may be adapted for use by older children and adults. All items are illustrated; sources for obtaining the item are provided at the end of the catalog. (ED)

Language Activities in Nursery School: A Guide for Preschool Teachers.  
Indianapolis Council of Parent Cooperatives, Ind.

Pub Date 75

Note—67p.

Available from—Indianapolis Council of Parent Cooperatives, Inc., 5512 Skyridge Drive, Indianapolis, Indiana 46250 (Paper, \$1.25)

**EDRS Price MF-\$0.76 HC-\$3.32 Plus Postage**  
**Descriptors**—Attention Span, Creative Activities, Creative Expression, \*Curriculum Guides, \*Early Childhood Education, \*Language Arts, \*Learning Activities, Listening Skills, Memory, Motor Development, \*Preschool Programs, Problem Solving, Self Concept, Vocabulary Development

The activities described in this guide have been collected in an effort to suggest an underlying philosophy for a language arts curriculum in nursery schools and to outline and suggest a variety of methods by which this philosophy can be put to use. Materials commonly found in the classroom, outside, and in the home, and well-known songs and games are here presented in the context of promoting language development in the preschool child. The guide is divided into four sections: (1) using visual symbols in communication; (2) motoric expression; (3) speaking; and (4) listening. Each section begins with a rationale followed by a list of activities grouped in approximate order of difficulty. (ED)

**Infants' Reactions to Unfamiliar Adults: A Discussion of Some Important Issues.**

Pub Date Apr 75

Note—46p.; Papers presented at the Biennial Meeting of the Society for Research in Child Development (Denver, Colorado, April 10-13, 1975)

**EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage**

**Descriptors**—Affective Behavior, Behavior Patterns, Cognitive Development, \*Emotional Development, \*Infant Behavior, \*Observation, Parent Child Relationship, Perceptual Development, \*Research Methodology, Statistical Analysis, \*Stranger Reactions, Symposia, Visual Perception

Papers and discussants' comments from a symposium on issues concerning infants' reactions to strangers are presented. Researchers agreed that there is a developmental shift in infant behavior at 7 to 9 months of age when the infant becomes more cautious in approaching strangers. However, investigators hypothesize that the presence of the mother, the mother-child relationship, or the context in which the child-stranger interactions occur may affect the strength and quality of that interaction in differing ways. Symposium discussants suggest that infant fear of strangers may not be as prevalent or as unidimensional as once supposed. Suggestions are made for more precise research methods, observational techniques, and behavioral scoring. (BRT)

**A Comparison of Self Concept and School Attitude of Third Grade Low Achievers in Homogeneous Versus Heterogeneous Groupings.**

Pub Date May 74

Note—40p.

**EDRS Price MF-\$0.76 HC-\$1.95 Plus Postage**

**Descriptors**—\*Ability Grouping, Academic Ability, Achievement Tests, Attitude Tests, \*Elementary Education, Grade 3, Heterogeneous Grouping, Homogeneous Grouping, Literature Reviews, \*Low Achievers, \*School Attitudes, \*Self Concept, Self Concept Tests

A comparison of the self concepts and school attitudes of third grade low achievers in homogeneously versus heterogeneously grouped classrooms is made in this study. An extensive review of the literature on ability grouping, self concept (and self concept tests), and school attitudes related to grouping is presented. In the study, low achievers were defined as students whose grade point fell between 1.6 and 2.6 on the overall reading test scores of the Metropolitan Achievement Test given at the beginning of the school year. Thirty children from each ability group type were given the "Self Appraisal Inventory" to measure their self concepts and the "School Sentiment Index" to measure their school attitudes. (The texts of these "yes-no" answer questionnaires are provided in the appendix.) Results indicated that ability grouping alone may not necessarily promote a more positive self concept for low achievers. However, homogeneous grouping appears to have a positive influence on the child's attitude toward school. It is predicted that, in a multiple group correlation, the self concept and school attitude of a child will be positively related. (Authors/ED)

**A Developmental Study of Children's Recall of Story Material.**

Pub Date Apr 75

Note—21p.; Paper presented at the Biennial Meeting of the Society for Research in Child Development (Denver, Colorado, April 10-13, 1975)

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

**Descriptors**—Age Differences, \*Comprehension Development, \*Early Childhood Education, Grade 1, Grade 3, \*Memory, Models, \*Recall (Psychological), Research Methodology, \*Retention, Short Stories

This study investigated the development of story recall in elementary school children through development of a model of story comprehension which specified both the rules for informational transformations and elaborations and the nature of the organizational structure of stories. Using Rumelhart's (1974) schema for analyzing stories in terms of a network of information categories and the logical relationships which exist between these categories, a story was constructed which contained 23 informational units. The story was read to 15 first graders and 15 third graders, with recall required after 20 seconds and again after a delay of one week. The data were analyzed in two different ways: (1) analyses pertaining to both the total number of categories accurately recalled by subjects and to a comparison of the categories recalled in the story; and (2) analyses pertaining to elaborations on the original story both as transformations of the original categories and as additions of new information. Results of these analyses are outlined and it is concluded that Rumelhart's schema appears to have value in directing further research in the comprehension of story material. (ED)

**The Australian Aboriginal Child: Bibliography and Abstracts. Part I: Physical and Intellectual Development.**

Pub Date Apr 75

Note—19p.

**EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage**

**Descriptors**—\*Annotated Bibliographies, Classification, Developmental Tasks, \*Early Childhood Education, \*Foreign Countries, Health, \*Intellectual Development, Intervention, Language Development, Nature Nurture Controversy, \*Physical Development, Preschool Programs, Program Descriptions, Thought Processes

**Identifiers**—\*Australian Aborigines

This abstract bibliography concentrates on aspects of the physical and intellectual development of the Australian Aboriginal child, although educational, sociological and other issues are also raised in a number of the entries included. Most of the 57 entries are journal articles, although some are book chapters, reports and conference papers. A brief introduction to the bibliography outlines the major issues discussed and the entries in which these issues are raised. Generally, the alphabetically arranged bibliography consists of entries related to: (1) physical development and health; (2) the preschool intervention project at Bourke (including philosophy, method, and summary of the project; first-year and follow-up results; and criticisms); (3) language development; (4) conservation and classification studies; (5) discussion of the nature/nurture controversy as it pertains to the Australian Aboriginal child; and (6) intellectual development and thought processes. **Identifiers**—\*Project Home Learning Center

The Home Learning Center (HLC) Project, a combination of research and demonstration containing phases of basic research, material development and field testing of materials and delivery system, began in 1968 as a longitudinal investigation of a home-oriented approach to intervention in the lives of very young children which might enhance their ability to function in life. This project was the third in a series of longitudinal studies using the same population. In all three studies, the essential ingredient was weekly visits by trained paraprofessional parent educators (drawn from the community) who provided the parent with ideas and activities which could be used at home. The HLC program continued intervention through the child's third year (adding a weekly group play session) and collected data on the effects of this type of intervention on children and parents three years after termination of intervention. A total of 204 experimental and control families participated in this final phase. At age 6, all children were measured by the Stanford-Binet, Caldwell Preschool Inventory, and Task Oriented Behavior Scale. Mothers' attitudes and behavior were measured by their responses on two interviews scheduled. Results are given; and discussions on the long-time effects of intervention and the efficacy of the HLC model are presented. (ED)

**Identifiers**—\*Foster Family Service

These standards are intended to be goals for the continuous improvement of foster family services to children and are thought to represent practices that are currently considered to be desirable in providing a social service for individual children in a way that promotes their well-being. The changing patterns of foster family care and basic principles underlying practice in foster family service are discussed in the introduction. The following areas are described by the standards: (1) foster family service as a child welfare service and the types of foster family care; (2) legal rights and responsibilities of parents, before, during, and after placement of their child in a foster care home; (3) services to the child (agency responsibilities and appropriate social work); (4) requirements, selection, development and use of foster homes; (5) proper organization and administration of foster family service by a designated agency; and (6) planning and organization of contingent community services and provisions to support foster family care. **Identifiers—Classroom Behavior Inventory**

This paper reports the development of a Classroom Behavior Inventory and a series of studies which have developed and refined methods for collecting teacher ratings of children's social, emotional and task-oriented behavior from preschool through high school. Findings suggest that the Classroom Behavior Inventory is a relatively economical, reliable, and valid method for collecting data on classroom behavior. The Inventory should be of use in research on adjustment and achievement. The development of a conceptual model for classroom behavior allows integration of many studies in the field of clinical psychology and personality research and provides a guide for sampling the domain of child adaptation to the classroom. **Eye Movements as an Index of Television Viewing Strategies.**

Pub Date Apr 75

Note—20p.; Paper presented at the Biennial Meeting of the Society for Research in Child Development (Denver, Colorado, April 10-13, 1975)

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—\*Comics (Publications), Educational Television, \*Elementary Education, Eye Fixations, \*Eye Movements, Filmstrips, Reading Materials, \*Reading Research, Reading Skills, Remedial Reading, \*Television Research, Television Viewing

The eye movement patterns of good readers, poor readers and functionally illiterate children are discussed in relation to television and film-strip viewing and comic book reading. Studies conducted since 1972 on the eye movement patterns of children between 9 and 11 years of age are described and the results discussed. Suggestions are presented concerning the production of TV shows, comic books and filmstrips for use in reading remediation. These include (1) the most effective use of printed material on the screen in conjunction with action in children's educational television shows; (2) the best placement of print, amount and size of print, type of presentation, relationship of words to action, and types of art work for comic books; and from preliminary findings, (3) the best timing, visual to audio relationship, and position and type of print for filmstrips based on comic book formats. **Exploratory Behavior.**

Pub Date Apr 75

Note—14p.; Paper presented at the Biennial Meeting of the Society for Research in Child Development (Denver, Colorado, April 10-13, 1975)

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—\*Behavior Theories, \*Child Development, \*Curiosity, Motivation, \*Operant Conditioning, Reinforcement, Reinforcers, \*Stimuli

Identifiers—Behavior Analysis, \*Exploratory Behavior

This paper points out the inadequacies of emotional or drive-based theories of exploratory behavior and offers instead a behavior analysis conceptualization. Exploratory behavior as an emotional state was rejected because the environmental conditions said to arouse exploration and the behaviors said to manifest curiosity are too general to separate from other kinds of interactions. The drive theory was discarded for two reasons: (1) physiochemical change as the distinction between exploratory and non-exploratory behavior has not yet been clearly demonstrated and (2) the collative stimulus approach, in which the comparison of stimuli is said to arouse curiosity and thus lead to specific exploratory behavior, has not facilitated research. Behavior analysts contend simply that exploratory behavior generates repertoires that facilitate the development of complex cognitive behavior and is the sort of behavior that is established and maintained by nonappetitive reinforcers. **Dimensionality in the Similarity Judgments of Young Children.**

Pub Date Apr 75

Note—11p.; Paper presented at the Biennial Meeting of the Society for Research in Child

Development (Denver, Colorado, April 10-13, 1975)

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—Age Differences, \*Chinese Americans, Cultural Differences, Dimensional Preference, \*Discrimination Learning, \*Early Childhood Education, Grade 3, Kindergarten Children, \*Learning Processes, \*Perceptual Development, Serial Ordering, Shift Studies, Visual Stimuli

Identifiers—\*Dimensional Processing, Transitivity

In order to examine the nature of dimensional processing in children, 20 kindergarten and 20 third grade Chinese-American children were asked to make similarity judgments for unidimensional sets of stimuli differing in color (hue), size, and shape, respectively. Age differences were generally confined to the color set. The judgments of the older children were more internally consistent, and more similar to the other children in their age group than were the younger children. The frequency of good-fitting Scaling Solutions was also higher for the older children. The processing of color in a relational manner thus seems to develop more slowly than relational processing of size or shape. Implications of these results are discussed. Forty white kindergarten children also did all three tasks. Results for these children indicated the same sequence of difficulty, although these children were less consistent and sophisticated than the Chinese children. (Author/ED)

**The Development of Self-Perceptions in Children and Adolescents.**

Pub Date Apr 75

Note—13p.; Paper presented at the Biennial Meeting of the Society for Research in Child Development (Denver, Colorado, April 10-13, 1975)

EDRS Price MF-\$0.76 HC-\$1.58 Plus Postage

Descriptors—Abstraction Levels, Adolescents, \*Age Differences, Cognitive Development, Elementary School Students, \*Elementary Secondary Education, Interpersonal Relationship, \*Personality Development, \*Self Concept, Self Concept Tests, Self Esteem, \*Self Evaluation, Test Reliability

Developmental changes in self-perceptions were studied in children and adolescents in grades 4, 6, 8, 10, and 12. The responses of subjects to the question Who am I? were analyzed by means of a 30-category scoring system. Children described themselves in terms of their physical appearance and their behavior, while adolescents referred to their beliefs and their interpersonal style. Few sex differences were noted. Adolescents did not use more categories than children; they used different categories. (Author/ED)
